18 ENERGETIKA ENERGY

št./No 2

LETNA ENERGETSKA STATISTIKA, SLOVENIJA, 1996–2003

ANNUAL ENERGY STATISTICS, SLOVENIA, 1996–2003

Od leta 1999 je proizvodnja električne energije na pragu vsako leto naraščala, v zadnjem letu pa se je zmanjšala za 5 %. Zmanjšanje je bilo posledica lanskega sušnega leta in kar za 7 % manjše proizvodnje hidroelektrarn. Končna poraba električne energije se je povečala za 6 %.

Lignit je še vedno zelo pomemben energetski vir za proizvodnjo električne energije, saj se skoraj ves razpoložljivi lignit (99 %) porabi za transformacijo. V zadnjem letu se je proizvodnja lignita, glede na prejšnje leto povečala za 4 %. Proizvodnja rjavega premoga se je v primerjavi s prejšnjim letom zmanjšala za 5 %.

Med tekocimi gorivi se je v zadnjem letu opazno zmanjšala poraba neosvinčenega motornega bencina 98 (za 14 %) in 95 (za 2 %). V zadnjih letih pa močno narašča poraba dizelskega goriva. Od lanskega leta se je poraba povečala za 9 %, od leta 2000 pa kar za 39 %.

Poraba zemeljskega plina se je po rahlem upadu v letu 2002 (ta je bil predvsem posledica mile zime) v zadnjem letu spet povečala – najbolj v transformacijah (za 41 %) in v končni porabi zemeljskega plina v gospodinjstvih (za 26 %).

Proizvodnja toplotne energije je v zadnjem letu narasla za 7 %. Zaradi izboljšanega spremljanja porabe topolute v predelovalnih dejavnostih in gradbeništvu so za leto 2003 na voljo podrobnejši podatki.

Končna poraba energije v Sloveniji se je v zadnjem letu povečala za 3 %. Ker se je domača proizvodnja primarne energije zmanjšala za 2 %, se je porast končne porabe odrazil v 6-odstotnem povečanju energetske odvisnosti. Ta je zdaj 52-odstotna.

V letu 2003 se je močno povečala poraba električne energije na prebivalca (za 8 %). Povečanje bi bilo še večje, če se ne bi za 2 % izboljšala energetska učinkovitost.

Delež obnovljivih virov v oskrbi z energijo se je od leta 2002 z 11,2 % zmanjšal na 10,8 %. Še vedno pa Slovenija kar 23 % električne energije proizvede iz obnovljivih virov.

From 1999 on net production of electricity increased every year whereas in the last year it decreased by 5%. The reason for the decrease is last year's drought and consequently 7% lower production in hydro power plants. In the last year total final consumption of electricity increased by 6%.

Lignite is still a very important energy source for electricity production. Almost all lignite (99%) is consumed in transformations. In the last year lignite production increased by 4%. Production of brown coal decreased by 5% compared to the previous year.

Among liquid fuels the decrease of unleaded motor gasoline 98 (by 14%) and 95 (by 2%) is noticeable. In recent years the consumption of diesel oil has been in strong increase. Since last year the consumption has increased by 9% and since 2000 by as much as 39%.

After a slight decrease in 2002, as a consequence of mild winter, the consumption of natural gas has increased again. The biggest increase was registered in transformations (41%), followed by household consumption (26%).

In the last year the production of heat increased by 7%. Improved data collection of energy consumption in manufacturing and construction sector resulted in more detailed data of final heat consumption.

Final energy use in Slovenia has increased by 3% since last year. Indigenous production decreased by 2%, which resulted in 6% increase of energy dependency (52%).

The electricity consumption per capita has increased by 8% in 2003. Increase would have been even bigger if the energy efficiency had not improved by 2%.

The share of renewable energy in total primary energy supply has decreased from 11.2% to 10.8% since 2002. The share of electricity production from renewable sources in Slovenia is still 23%.

1. ELEKTRIČNA ENERGIJA

ELECTRICITY

1.1 Letna bilanca proizvodnje in porabe električne energije, Slovenija, 1996–2003

Annual balance of production and consumption of electricity, Slovenia, 1996–2003

METODOLOŠKA POJASNILA**Vir in metode zbiranja podatkov**

Pričazani podatki so rezultat naslednjih statističnih raziskovanj:

E1-EE/L je letno poročilo o proizvodnji električne in toplotne energije v elektrarnah. Z njim zbiramo podatke o proizvodnji (po vrstah goriva) in prodaji električne in toplotne energije, porabi goriv v elektrarnah ter vrstah, številu in močeh strojev, ki poganjajo generatorje.

E2-SP/L je letno poročilo samoproizvajalcev električne in toplotne energije. Z njim zbiramo podatke o proizvodnji (po vrstah goriva), porabi in prodaji električne in toplotne energije, porabi goriv pri samoproizvajalcih ter vrstah, številu in močeh strojev, ki poganjajo generatorje.

E3-TOP/L je letno poročilo o oskrbi s toplotno energijo. Z njim zbiramo podatke o proizvodnji toplotne energije po vrstah goriva, nabavi toplotne

METHODOLOGICAL EXPLANATIONS**Source and methods of data collection**

Presented data are the results of the following statistical surveys:

E1-EE/L is an annual report of electricity and heat production in public power plants. With the report the data on production (by energy source) and sale of electricity and heat, on fuel consumption in public plants as well as on types, number and power of engines that drive generators are collected.

E2-SP/L is an annual report of autoproducers. With the report the data on production (by energy source), consumption and sale of electricity and heat, on fuel consumption by autoproducers as well as on types, number and power of engines that drive generators are collected.

E3-TOP/L is an annual report of heat supply. With the report the data on production of heat by energy source, on purchase of heat, on fuel

energije, porabi goriv za proizvodnjo toplotne energije, prodaji toplotne energije po sektorjih ter o omrežju daljinskega ogrevanja.

E4-EEP/L je letno poročilo o prenosu električne energije. Z njim zbiramo podatke o nabavi in oddaji električne energije na nivoju prenosnega omrežja, uvozu in izvozu električne energije ter izgubah v prenosnem omrežju.

E5-EED/L je letno poročilo o distribuciji električne energije. Z njim zbiramo podatke o nabavi in oddaji električne energije na nivoju distribucijskega omrežja, izgubah v distribucijskem omrežju ter podatke o lastnih elektrarnah.

E6-NAF/L je letno poročilo o proizvodnji in oskrbi s surovo nafto, zemeljskim plinom, petrokemičnimi surovinami, aditivi in drugimi ogljikovodiki. Z njim zbiramo podatke o proizvodnji, uvozu, izvozu, lastni porabi surove nafte, zemeljskega plina, plinskega kondenzata, aditivov in drugih ogljikovodikov.

E7-NP/L je letno poročilo proizvajalcev naftnih proizvodov. Z njim zbiramo podatke o proizvodnji, uvozu, izvozu, reciklaži, lastni porabi, reklasifikaciji, prodaji in zalogah naftnih proizvodov.

E8-NPT/L je letno poročilo o trgovini z naftnimi proizvodi. Z njim zbiramo podatke o prodaji naftnih proizvodov trgovskim podjetjem, energetskemu sektorju, predelovalnim dejavnostim in ruderstvu, gradbeništvu, cestnem in železniškem prometu, gospodinjstvom in ostalim.

E9-PL/L je letno poročilo o oskrbi s plini. Z njim zbiramo podatke o uvozu, nakupu, prodaji, lastni porabi in izgubah zemeljskega plina in utekočinjenega naftnega plina.

E10-TGT/L je letno poročilo o trgovini s trdnimi gorivi. Z njim zbiramo podatke o uvozu, nakupu, prodaji, izvozu, zalogah, kurilnosti in vsebnosti žvepla trdnih goriv.

E11-TG/L je letno poročilo o pridobivanju premoga. Z njim zbiramo podatke o proizvodnji, prodaji in izvozu rjavega premoga in lignita.

E-PE/M je mesečno poročilo o porabi energije, goriv in izbranih naftnih proizvodov. Zajeta je vsa poraba goriv, tudi za proizvodnjo električne energije in toplotne energije za prodajo.

Poleg tega so uporabljeni še podatki iz letnih poročil iz področij Gradbeništvo in Promet.

Zajetje

V statistično raziskovanje o proizvodnji električne in toplotne energije (E1-EE/L) so vključeni poslovni subjekti, katerih osnovna dejavnost je proizvodnja električne energije. Zajetje je popolno.

V statistično raziskovanje samoproizvajalcev električne in toplotne energije (E2-SP/L) so vključeni poslovni subjekti, ki poleg svoje osnovne dejavnosti proizvajajo tudi električno in/ali toplotno energijo za lastne potrebe in prodajo. Zajetje je popolno.

V statistično raziskovanje o oskrbi s toplotno energijo (E3-TOP/L) so vključeni poslovni subjekti, ki proizvajajo in/ali distribuirajo toplotno energijo. Zajetje je popolno.

V statistično raziskovanje o prenosu električne energije (E4-EEP/L) je vključeno podjetje za prenos električne energije. Zajetje je popolno.

V statistično raziskovanje o distribuciji električne energije (E5-EED/L) so vključeni poslovni subjekti za distribucijo električne energije. Zajetje je popolno.

V statistično raziskovanje o proizvodnji in oskrbi s surovo nafto, zemeljskim plinom, petrokemičnimi surovinami, aditivi in drugimi

consumption in heat only plants, on distribution of heat as well as on heat pipelines are collected.

E4-EEP/L is an annual report of electricity transmission. With the report the data on purchase, transmission, import, export of electricity and on losses in transmission grid are collected.

E5-EED/L is an annual report of electricity distribution. With the report the data on purchase and distribution of electricity, on losses in distribution grid as well as on distribution power plants are collected.

E6-NAF/L is an annual report of production and supply with crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons. With the report the data on extraction, import, export, own use of crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons are collected.

E7-NP/L is an annual report of petroleum products production. With the report the data on production, import, export, recycling, own use, products transfer, sale as well as on stocks of petroleum products are collected.

E8-NPT/L is an annual report of petroleum products trade. With the report the data on sale of petroleum products to trade companies, energy sector, manufacturing and mining sector, construction sector, road and rail transport, households and other sectors are collected.

E9-PL/L is an annual report of gas supply. With the report the data on import, purchase, sale, own use and losses of natural gas and liquefied petroleum gas are collected.

E10-TGT/L is an annual report of solid fuels trade. With the report the data on import, purchase, sale, export, and stocks as well as on calorific values and sulphur content of solid fuels are collected.

E11-TG/L is an annual report of coal extraction. With the report the data on production, sale and export of brown coal and lignite are collected.

E-PE/M is a monthly report on consumption of energy, fuels and selected oil products. The report includes fuel consumption also for production of electricity and heat for sale.

In addition, the data from annual construction and transport reports are used.

Coverage

The statistical survey of electricity and heat production in public power plants (E1-EE/L) covers public supply undertakings, which generate electricity for sale to third parties as their primary activity. The survey has full coverage.

The statistical survey of autoproducers (E2-SP/L) covers autoproducer undertakings, which generate electricity and/or heat wholly or partly for their own use as an activity which supports their primary activity. The survey has full coverage.

The statistical survey of heat supply (E3-TOP/L) covers heat only plants and heat distribution companies. The survey has full coverage.

The statistical survey of electricity transmission (E4-EEP/L) covers the electricity transmission company. The survey has full coverage.

The statistical survey of electricity distribution (E5-EED/L) covers electricity distribution companies. The survey has full coverage.

The statistical survey of production and supply with crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons (E6-NAF/L) covers

ogljikovodiki (E6-NAF/L) je vključena rafinerija. Zajetje je popolno.

V statistično raziskovanje proizvajalcev naftnih proizvodov (E7-NP/L) so vključeni poslovni subjekti, katerih osnovna dejavnost je proizvodnja naftnih derivatov. Zajetje je popolno.

V statistično raziskovanje o trgovini z naftnimi proizvodi (E8-NPT/L) so vključeni izbrani poslovni subjekti, ki trgujejo z naftnimi proizvodi. Kriterij izbora je vrednost uvoza oz. izvoza naftnih proizvodov v preteklem letu. Vključeni so vsi poslovni subjekti, ki so presegli prag 20 mio SIT.

V statistično raziskovanje o oskrbi s plini (E9-PL/L) so vključeni poslovni subjekti za oskrbo z zemeljskim plinom in utekočinjenim naftnim plinom. Zajetje je popolno.

V statistično raziskovanje o trgovini s trdnimi gorivi (E10-TGT/L) so vključeni izbrani poslovni subjekti, ki trgujejo s trdnimi gorivi. Kriterij izbora je vrednost uvoza oz. izvoza v preteklem letu. Vključeni so vsi poslovni subjekti, ki so presegli prag 2 mio SIT.

V statistično raziskovanje pridobivanju premoga (E11-TG/L) so vključeni poslovni subjekti s področja pridobivanja rjavega premoga in lignita. Zajetje je popolno.

V statistično raziskovanje o porabi energije, goriv in izbranih naftnih proizvodov (E-PE/M) so vključeni poslovni subjekti iz področja Rudarstvo in Predelovalne dejavnosti, ki imajo nad 10 zaposlenih in ki niso samostojni podjetniki, in izbrane enote iz področja Gradbeništvo.

Definicije in pojasnila

Dejanska moč je moč, s katero lahko elektrarna obratuje daljši čas.

Delež obnovljivih virov energije v celotni proizvodnji električne energije je razmerje med količino električne energije, proizvedene iz obnovljivih virov, in celotno proizvodnjo električne energije.

Delež obnovljivih virov energije v oskrbi z energijo je razmerje med razpoložljivimi obnovljivimi viri in celotno oskrbo z energijo.

Energetska intenzivnost je razmerje med količino energije (oskrba z energijo ali končna poraba energije) in bruto domaćim proizvodom, izraženim v stalnih cenah. Energetska intenzivnost se manjša z izboljšanjem energetske učinkovitosti.

Energetska odvisnost je razmerje med neto uvozom in oskrbo z energijo na nivoju države. Meri odvisnost države od uvoza energije.

Energetska raba je skupna poraba električne energije in goriv za pogon, notranji transport, ogrevanje delovnih in pisarniških prostorov, poraba tople vode in pare za pogon in tehnološke procese. Vključuje tudi porabo za proizvodnjo električne in/ali toplotno energije.

Energetska učinkovitost je razmerje med končno porabo energije in oskrbo z energijo.

Energetski sektor vključuje porabo goriv in energije pri aktivnostih, kot so pridobivanje in proizvodnja goriv. Ne vključuje lastne porabe elektrarn in toplarn. V energetski sektor so vključena podjetja, ki opravljajo dejavnosti izpodročja Oskrba z elektriko, plinom in vodo (E) in iz podpodročij Pridobivanje energetskih surovin (CA) in Proizvodnja koksa, naftnih derivatov, jedrskega goriva (DF) po Standardni klasifikaciji dejavnosti.

GCV (gross calorific value) – zgorevalna toplota ali zgornja kalorična vrednost – je vsa pri zgorevanju sproščena toplota.

Javne elektrarne so podjetja, katerih osnovna dejavnost je proizvodnja

the refinery. The survey has full coverage.

The statistical survey of petroleum products production (E7-NP/L) covers petroleum products production companies. The survey has full coverage.

The statistical survey of petroleum products trade (E8-NPT/L) covers selected petroleum products trade companies. The sample frame is the list of units performing export or import of petroleum products in the last year. The cut-off of import/export values of SIT 20 Mio is applied to this population.

The statistical survey of gas supply (E9-PL/L) covers gas and LPG supply companies. The survey has full coverage.

The statistical survey of solid fuels trade (E10-TGT/L) covers selected solid fuels trade companies. The sample frame is the list of units performing export or import of solid fuels in the last year. The cut-off of import/export values of SIT 2 Mio is applied to this population.

The statistical survey of coal extraction (E11-TG/L) covers brown coal and lignite mines. The survey has full coverage.

The statistical survey on consumption of energy, fuels and selected oil products (E-PE/M) covers business subjects from mining and quarrying and from manufacturing that have more than 10 employees and are not private entrepreneurs as well as selected units from construction.

Definitions and explanations

Net power is power with which a power plant can operate for a longer time.

Share of renewable energy in total electricity is the ratio of electricity produced from renewable sources and total electricity production.

Share of renewable energy in TPES is the ratio of available renewable sources and total primary energy supply.

Energy intensity is the ratio of energy quantity (total primary energy supply or total final consumption) and gross domestic product at constant prices. Energy intensity decreases with energy efficiency improvements.

Energy dependency is the ratio of net imports and total primary energy supply. It measures the extent to which the country relies on imports to meet its energy needs.

Energy use is total consumption of electricity and fuels for drive, internal transport, heating of workplaces and offices, consumption of warm water and steam for drive and technological processes. It includes also the consumption for electricity and/or heat production.

Energy efficiency is the ratio of total final consumption and total primary energy supply.

Energy sector includes fuel and energy that is consumed by the energy industry to support the extraction and production of fuels and transformation activities. It excludes own use of plants. The energy sector covers section Electricity, gas and water supply (E) and subsections Mining and quarrying of energy producing materials (CA) and Manufacture of coke, refined petroleum products and nuclear fuel (DF) of the national Standard Classification of Activities.

GCV (gross calorific value) measures the total amount of heat produced by fuel combustion.

Public plants are public supply undertakings, which generate electricity

električne ali električne in toplotne energije. Lahko so v zasebni ali v javni lasti.

Maksimalna dnevna moč je največja moč, s katero je elektrarna obratovala en dan v opazovanem letu.

Nazivna moč generatorja je tista moč, ki jo deklarira proizvajalec in je napisana tudi na generatorju.

NCV (net calorific value) – kurilnost ali spodnja kalorična vrednost je tisti del zgorevalne toplotne, ki jo dobimo, če dimne pline ohlajamo samo do temperature nad rosiščem vodne pare.

Neenergetska raba energije: energenti se uporabljajo kot surovine, in ne kot gorivo.

Obnovljivi viri zajemajo biomaso, biopljin ter industrijske in komunalne odpadke.

Oskrba z energijo je domača proizvodnja + uvoz - izvoz - mednarodna pomorska skladišča ± spremembe zalog. Pri preračunu vodne energije na raven primarne energije je upoštevan 100-odstotni izkoristek. Ekvivalent primarne energije pri nuklearni energiji pa je izračunan iz proizvodnje na generatorju in ob upoštevanju 33-odstotnega zkoristka.

Predelovalne dejavnosti in gradbeništvo vključujejo področje Predelovalne dejavnosti (D) brez podpodročja Proizvodnja koksa, naftnih derivatov, jedrskega goriva (DF) in področje Gradbeništvo (F) po Standardni klasifikaciji dejavnosti.

Samoproizvajalci so podjetja, ki poleg svoje osnovne dejavnosti proizvajajo še električno energijo in/ali toplotno energijo (v celoti ali delno) za lastne potrebe. Lahko so v zasebni ali v javni lasti.

Sm³ – standardni kubični meter pri 15 °C in 1,01325 bar.

Sprememba zalog je razlika med zalogami na začetku in zalogami na koncu obdobja.

Statistične razlike vključujejo vsoto nepojasnjениh statističnih razlik za posamezne kategorije goriv, ki lahko nastanejo zaradi uporabe različnih kurilnosti pri preračunu iz naravnih enot v enote za energijo.

TE-TO – termoelektrarna-toplarna je objekt, ki je namenjen soproizvodnji električne in toplotne energije.

Tona ekvivalentne nafte (toe) je enota, ki izraža količino sproščene toplotne pri zgorevanju ene tone nafte. Toe je računska enota, ki se uporablja v glavnem za prikazovanje rabe energije v energetskih bilancah. 1000 toe = 41,868 TJ

Toplarne so podjetja, ki proizvajajo izključno toplotno energijo.

Transformacija zajema porabo goriv za proizvodnjo električne in toplotne energije.

Trdna goriva zajemajo lignit, domači in uvoženi rjavi premog, koks, črni premog in antracit.

UNP – utekočinjeni naftni plin – je butan, propan ali mešanica obeh.

Objavljanje

Letno:

- Statistične informacije. Energetika
- Slovenija v številkah
- Statistični letopis Republike Slovenije

or electricity and heat as their primary activity. They may be privately or publicly owned.

Maximum daily power is the maximum power with which the power plant operated one day in the observed year.

Nominal power of generators is power declared by the producer and written on the generator.

NCV (net calorific value) measures the amount of heat that can be used. The other part is used for evaporation of fuel moisture.

Non-energy use is when the energy sources are used as raw materials and not as fuels.

Renewable sources comprise solid biomass, biogas, industrial and municipal waste.

Total primary energy supply is made up of indigenous production + imports - exports - international marine bunkers ± stock changes. Level of primary hydro energy is calculated from the hydro generation with the 100% efficiency. However, the primary energy equivalent of nuclear electricity is calculated from the gross generation by assuming a 33% conversion efficiency.

Manufacturing and construction covers section Manufacturing (D) without subsection Manufacture of coke, refined petroleum products and nuclear fuel (DF) and section Construction (F) of the Standard Classification of Activities.

Autoproducers are autoproducer undertakings, which generate electricity and/or heat wholly or partly for their own use as an activity, which supports their primary activity. They may be privately or publicly owned.

Sm³ cubic meter standard conditions i.e. 15 °C and 1,01325 bar.

Stock change reflects the difference between opening stock level at the beginning of the period and closing level at the end of the period.

Statistical difference is a category which includes the sum of unexplained statistical differences for individual fuels. It also includes the statistical differences that arise because of the variety of conversion factors.

CHP plants are combined heat and power plants, which are designed to produce both heat and electricity.

Tonne of oil equivalent (toe) expresses the amount of heat equivalent to the heat of combustion of one tonne of oil. Toe is accounting unit which is used for expressing energy use in energy balances. 1000 toe = 41,868 TJ

Heat only plants are plants which are designed to produce heat only.

Transformation includes fuel consumption for electricity and heat production.

Solid fuels include lignite, domestic and imported brown coal, coke and hard coal.

LPG liquefied petroleum gas is butane, propane or a mixture of both.
