ENERGY

št./No 3

CENE ENERGENTOV, SLOVENIJA, JANUAR – JULIJ 2004

PRICES OF ENERGY PRODUCTS, SLOVENIA, JANUARY – JULY 2004

- ▶ Statistični urad je začel zbirati in izračunavati cene električne energije in zemeljskega plina v letih 2003 in 2004. Da bi bilo področja cen energentov zaokroženo, so v publikaciji prikazane tudi cene tekočih goriv in toplote. Cenam v Sloveniji so dodane tudi mednarodne primerjave (EU 15), saj so podatki zbrani v skladu z zahtevami Direktive Sveta (EGS) št. 90/377 z dne 29. junija 1990 o enotnem postopku Skupnosti za večjo preglednost cen plina in električne energije, ki se zaračunavajo industrijskim končnim uporabnikom. Podatki o cenah energentov se objavljajo dvakrat letno.
- ▶ **Električna energija:** Porabniška skupina D<sub>c</sub> v gospodinjstvih je po definiciji najbližja slovenskemu povprečnemu gospodinjstvu. Maloprodajna cena električne energije za to skupino je v januarju 2004 znašala 24 SIT/kWh. Primerjava je pokazala, da cena v Sloveniji dosega 75 % povprečne utežne maloprodajne cene v EU. Cena za porabniško skupino I<sub>g</sub> v industriji je januarja 2004 znašala 15 SIT/kWh in je predstavljala 89 % povprečne utežne cene z davki v EU.
- ▶ **Tekoča goriva:** V prvi polovici leta 2004 so se maloprodajne cene neosvinčenega 95-oktanskega bencina povisale za 7,5 %, cene dizelskega goriva za 6,8 % in cene ekstra lahkega kurilnega olja za 8,4 %. Porast maloprodajnih cen tekočih goriv bi bil zaradi rasti cen surove nafte na mednarodnih trgih še precej višji, če se ne bi trošarine v istem obdobju znižale od 10 % za neosvinčeni bencin do 56 % za ekstra lahko kurilno olje. Primerjava maloprodajnih cen v Sloveniji in EU je pokazala, da cene neosvinčenega 95-oktanskega bencina v juliju 2004 v Sloveniji dosegajo 75 %, dizelskega goriva 82 % in ekstra lahkega kurilnega olja 92 % utežnega povprečja maloprodajnih cen v EU.
- ▶ **Zemeljski plin:** Povprečna cena zemeljskega plina v gospodinjstvih za porabniško skupino D<sub>2</sub> (kuhanje/topla voda) se je v prvih šestih mesecih letošnjega leta v Sloveniji gibala od 94 do 97 SIT/Sm<sup>3</sup>, za porabniško skupino D<sub>3b</sub> (centralno ogrevanje) pa okrog 86 SIT/Sm<sup>3</sup>. Primerjava maloprodajne cene v Sloveniji in EU je pokazala, da cena v Sloveniji v primerjavi z utežno povprečno ceno v EU v januarju 2004 dosega za porabniško skupino D<sub>2</sub> 69 % in za porabniško skupino D<sub>3b</sub> 96 % cene v EU. Primerjava cene zemeljskega plina za industrijsko porabniško skupino I<sub>4-1</sub> v Sloveniji v januarju 2004 pa je pokazala, da cena za 4 % presega utežno povprečno ceno v EU.
- ▶ **Toplotna energija:** Povprečna cena toplotne energije v gospodinjstvu za porabniško skupino D<sub>3b</sub> se je v Sloveniji v prvi polovici leta znižala za 11 %. Primerjava cen v slovenskih mestih je pokazala, da je bila v istem obdobju cena najnižja v Velenju, najvišja pa v Kranju.
- ▶ **Paritete cen:** Pariteta cen energentov za ogrevanje stanovanjskih prostorov v prvi polovici leta 2004 kaže, da je bilo najdražje ogrevanje z električno energijo, kar je v skladu z načeli učinkovite rabe energije. Cena zemeljskega plina in cena ekstra lahkega kurilnega olja pa sta bili približno enaki in hkrati za okrog 50 % nižji od cene električne energije.
- ▶ In 2003 and 2004, the Statistical Office implemented a new statistical survey and recalculation of prices of electricity and natural gas according to the Council Directive (EEC) No. 90/377 of 29 June 1990 concerning a Community procedure to improve the transparency of gas and electricity prices charged to industrial end-users. In order to cover the complete area of energy prices, liquid fuels and heat prices are also shown. Together with energy prices in Slovenia there are also the international comparisons of prices. Energy prices data are published twice a year.
- ▶ **Electricity:** The standard consumer D<sub>c</sub> is by definition closest to the average Slovene household. In January 2004 the retail price of electricity for this group was 24 SIT/kWh. The comparison shows that the retail price in Slovenia represented 75% of the weighted average retail price in the EU. The electricity price for the standard consumer I<sub>g</sub> in industry was in January 2004 15 SIT/kWh and it represented 89% of the weighted average price with taxes in the EU.
- ▶ **Liquid fuels:** In the first half of 2004 retail prices of unleaded 95-octane motor gasoline increased by 7.5%, prices of diesel oil by 6.8% and prices of light fuel oil by 8.4%. The increase of the liquid fuels prices would be even bigger, following the increase of crude oil prices on the international markets if in the same period the excises for various fuels did not decrease from 10% for unleaded gasoline to 56% for light fuel oil. The comparison of retail prices in Slovenia and the EU shows that the price of unleaded 95-octane gasoline in Slovenia in July 2004 represented 75%, diesel oil 82% and light fuel oil 92% of weighted average retail prices in the EU.
- ▶ **Natural gas:** In the first half of 2004 the average price of natural gas for households for the standard consumer D<sub>2</sub> (cooking/water heating) in Slovenia ranged between 94 and 97 SIT/Sm<sup>3</sup> and for the standard consumer D<sub>3b</sub> (central heating) around 86 SIT/Sm<sup>3</sup>. The comparison of retail prices in Slovenia and the EU shows that the price in Slovenia in January 2004 represented 69% of the EU weighted average price for the standard consumer D<sub>2</sub> and 96% for the standard consumer D<sub>3b</sub>. The comparison of retail prices for industrial consumer I<sub>4-1</sub> shows that the price in Slovenia in January 2004 exceeded the weighted average price with taxes in the EU by 4%.
- ▶ **Heat:** Average price of heat for the standard household consumer D<sub>3b</sub> in Slovenia decreased by 11% in the first half of 2004. The comparison of prices shows that the lowest price was in Velenje and the highest in Kranj.
- ▶ **Price parity:** Households energy price parity shows that the most expensive energy form for heating is electricity, which is in line with energy efficiency principles. Prices of natural gas and light fuel oil are at the same level and are subject to minor market changes. They are approximately 50% lower than the electricity price.

## 5. PARITETA CEN ENERAGENTOV V GOSPODINJSTVIH PARITY OF PRICES OF ENERGY PRODUCTS IN HOUSEHOLDS

### 5.1 Pariteta cen energentov v gospodinjstvih, Slovenija, 2003 - 2004 Parity of prices of energy products in households, Slovenia, 2003 - 2004

**Slika 10: Pariteta cen energentov v gospodinjstvih, Slovenija, 2003 - 2004**  
Chart 10: Parity of prices of energy products in households, Slovenia, 2003 – 2004

#### STATISTIČNA ZNAMENJA

- ni pojava
- ... ni podatka
- \* popravljen podatek
- GJ gigajoule =  $10^9$  J
- kWh kilowattna ura =  $10^3$  Wh
- MWh megawattna ura =  $10^6$  Wh
- Sm<sup>3</sup> standardni kubični meter

#### STATISTICAL SIGNS

- no occurrence of event
- ... data not available
- \* corrected data
- GJ gigajoule =  $10^9$  J
- kWh kilowatt-hour =  $10^3$  Wh
- MWh megawatt-hour =  $10^6$  Wh
- Sm<sup>3</sup> cubic metre at standard conditions

#### METODOLOŠKA POJASNILA

##### Namen statističnega raziskovanja

je spremljanje cen energentov; tako dobimo informacijo o ravni cen v Sloveniji, služijo pa nam tudi za primerjavo s cenami v državah Evropske unije (EU). Da bi dosegli primerljivost podatkov o cenah energentov za posamezne porabniške skupine, je pri izračunih in prikazih cen v Sloveniji uporabljen enak metodološki pristop kot v drugih državah EU.

##### Viri in metode zbiranja podatkov

Vir podatkov za izračun cen električne energije za porabniške skupine v gospodinjstvih so cene, objavljene na spletnih straneh distribucijskih podjetij (Uredba o tarifnem sistemu za prodajo električne energije, Ul. RS 36/2004). Prikazane cene za posamezne gospodinjne porabniške skupine so preračunane v skladu z metodologijo, usklajeno in dogovorjeno z Eurostatom.

#### METHODOLOGICAL EXPLANATIONS

##### The purpose of the statistical survey

is to monitor prices of energy products, which serve as the information on the level of prices in Slovenia and for comparisons with the Member States of the European Union. In order to achieve comparability of results on prices of energy products for individual consumers, the calculation in presentation of prices in Slovenia is based on the same methodological approach as in the other EU Member States.

##### Sources and methods of data collection

The source of data for calculating prices of electricity for standard consumers in households is prices published on web pages of distribution companies (Decree on the Tariff System for Selling Electricity, OJ RS, 36/2004). Prices for individual household consumers are recalculated in accordance with the methodology harmonised with Eurostat.

Vir podatkov za izračun **cen električne energije za industrijske porabnike** je mesečno raziskovanje CENE-DOMA/M. Prikazane cene za porabniške skupine v industriji so preračune v skladu z metodologijo, predpisano v Direktivi Sveta (EGS) št. 90/377 z dne 29. junija 1990 o enotnem postopku Skupnosti za večjo preglednost cen plina in električne energije, ki se zaračunavajo industrijskim končnim porabnikom (90/377/EGS).

Podatki o **cenah naftnih proizvodov** v Sloveniji so povzeti po spletnih straneh naftne družbe Petrol, d. d. Vsi podatki o cenah, davčnih stopnjah in obremenitvah veljajo na 15. dan v prikazanem mesecu.

Podatki o **cenah zemeljskega plina za porabniške skupine v gospodinjstvih** v posameznih slovenskih mestih so povzeti iz veljavnih cenikov, objavljenih na spletnih straneh izbranih poslovnih subjektov za oskrbo z zemeljskim plinom. Trenutno povzemamo cene v večjih mestih (Ljubljana, Maribor in Celje), katerih skupna količina dobavljenega zemeljskega plina gospodinjstvom dosega okrog 80 % celotne količine dobavljenega zemeljskega plina gospodinjstvom v državi. Prikazane cene za posamezne gospodinjstve porabniške skupine so preračunane v skladu z metodologijo, usklajeno in dogovorjeno z Eurostatom. Prikazana je tudi povprečna cena za Slovenijo, ki je izračunana kot utežno povprečje cen v prikazanih mestih. Količine dobavljenega zemeljskega plina so povzete iz rednega mesečnega raziskovanja E9-PL/M. Vsi podatki o cenah, davčnih stopnjah in obremenitvah veljajo na 1. dan v prikazanem mesecu.

Vir podatkov za izračun **cen zemeljskega plina za industrijske porabnike** je mesečno raziskovanje E9-PL/M. Prikazane cene za porabniške skupine v industriji so preračune v skladu z metodologijo, predpisano v Direktivi Sveta (EGS) št. 90/377 z dne 29. junija 1990 o enotnem postopku Skupnosti za večjo preglednost cen plina in električne energije, ki se zaračunavajo industrijskim končnim porabnikom (90/377/EGS).

Podatki o cenah **toplotne energije** v posameznih slovenskih mestih so povzeti iz veljavnih cenikov izbranih poslovnih subjektov za proizvodnjo in oskrbo z daljinsko toploto. Prikazane so cene za izbrana mesta v Sloveniji (Ljubljana, Maribor, Kranj, Celje, Velenje, Trbovlje, Jesenice in Ravne), katerih skupna količina dobavljene toplote gospodinjstvom dosega okrog 88 % celotne količine dobavljene toplote gospodinjstvom v državi. Prikazane cene so preračunane za porabniško skupino s priključno močjo 10 kW in letno porabo 34,9 MWh, kar ustreza eni od standardnih porabniških skupin za zemeljski plin (D<sub>3b</sub>). Prikazana je tudi povprečna cena za Slovenijo, ki je izračunana kot utežno povprečje cen v prikazanih mestih. Količine dobavljene toplotne energije so povzete iz rednega mesečnega raziskovanja E3-TOP/M. Vsi podatki o cenah, davčnih stopnjah in obremenitvah veljajo na 1. dan v prikazanem mesecu.

Za prikaz **paritet cen** za gospodinjstve porabnike so izbrane cene električne energije za ogrevanje (porabniška skupina D<sub>a</sub>), cene zemeljskega plina za ogrevanje (porabniška skupina D<sub>3b</sub>) in ekstra lahkega kurilnega olja. Vse cene so preračunane na raven končne energije na osnovi kurilnosti ali spodnje kalorične vrednosti (NCV) in vključujejo vse davke in dajatve.

Vir podatkov za vse mednarodne primerjave so redne publikacije Eurostata, Statistics in Focus, Environment and Energy in Evropske komisije, Oil bulletin.

## Definicije in pojasnila

### Standardne porabniške skupine za gospodinjstva – električna energija

D<sub>a</sub> - luči, RTV, hladilnik, mali gospodinjstvi aparati; letna poraba skupaj 600 kWh, moč 3 kW

The source of data for calculating **prices of electricity for standard consumers in industry** is the monthly survey CENE-DOMA/M. Prices for individual industrial consumers are recalculated in accordance with the methodology defined in the Council Directive (EEC) No. 90/377 of 29 June 1990 concerning a Community procedure to improve the transparency of gas and electricity prices charged to industrial end-users.

Data on **prices of petroleum products** in Slovenia are taken over from web pages of Petrol d. d. oil company. All data on prices, tax rates and charges refer to the 15<sup>th</sup> day of the month.

Data on **prices of natural gas for standard consumers in households** in individual Slovene cities are taken over from the price-lists published on web pages of selected business subjects dealing with natural gas supply. At the moment prices in larger cities (Ljubljana, Maribor and Celje) are included. Gas supply to households in these cities represents about 80% of total quantity of natural gas supplied to households in Slovenia. Prices for individual household consumers are recalculated in accordance with the methodology harmonised with Eurostat. The average price for Slovenia is also shown, which is calculated as the weighted average of prices in observed cities. The quantities of supplied natural gas are taken over from the regular monthly survey E9-PL/M. All data on prices, tax rates and charges refer to the 1<sup>st</sup> day of the month.

The source of data for calculating **prices of natural gas for standard consumers in industry** is the monthly survey E9-PL/M. Prices for individual industrial consumers are recalculated in accordance with the methodology defined in the Council Directive (EEC) No. 90/377 of 29 June 1990 concerning a Community procedure to improve the transparency of gas and electricity prices charged to industrial end-users.

Data on **prices of heat** in individual Slovene cities are taken over from the price-lists published on web pages of selected business subjects dealing with heat supply. Prices in selected cities (Ljubljana, Maribor, Kranj, Celje, Velenje, Trbovlje, Jesenice and Ravne) are covered. Heat supply to households in these cities represents about 88% of total quantity of heat supplied to households in Slovenia. Prices for individual household consumers are recalculated for the standard consumer with the connecting power of 10 kW and annual consumption of 34.9 MWh, which corresponds to one of the standard consumer group for natural gas (D<sub>3b</sub>). The average price for Slovenia is also shown, which is calculated as the weighted average of prices in observed cities. The quantities of supplied heat are taken over from the regular monthly survey E9-TOP/M. All data on prices, tax rates and charges refer to the 1<sup>th</sup> day of the month.

For showing **price parities** for household consumers, prices of electricity for heating (standard consumer D<sub>a</sub>), natural gas for heating (standard consumer D<sub>3b</sub>) and light fuel oil are selected. All prices are recalculated to the level of final energy on the basis of net calorific value and include all taxes and charges.

The source of data for all international comparisons are regular Eurostat publications Statistics in Focus, Environment and Energy and Commission publications Oil Bulletin.

## Definitions and explanations

### Standard consumers for households – electricity

D<sub>a</sub> - lighting, radio, television, refrigerator, small electric appliances; annual consumption total 600 kWh, power 3 kW

D<sub>b</sub> - kot D<sub>a</sub>, ter pralni ali pomivalni stroj; letna poraba skupaj 1200 kWh, moč 3-4 kW

D<sub>c</sub> - kot D<sub>b</sub>, pralni in pomivalni stroj, bojler; letna poraba 3500 kWh, od tega ponoči 1300 kWh; moč 4-9 kW

D<sub>d</sub> - kot D<sub>b</sub>, pralni in pomivalni stroj, bojler; letna poraba 7500 kWh, od tega ponoči 2500 kWh; moč 6-9 kW

D<sub>e</sub> - kot D<sub>d</sub> in termoakumulacijska peč; letna poraba 20000 kWh, od tega ponoči 15000 kWh; moč 9 kW

D<sub>b</sub> - as for D<sub>a</sub> plus washing machine or dishwasher; annual consumption total 1200 kWh, power 3-4 kW

D<sub>c</sub> - as for D<sub>b</sub> with washing machine and dishwasher plus storage water heater; annual consumption 3500 kWh of which night 1300 kWh; power 4-9 kW

D<sub>d</sub> - as for D<sub>b</sub> with washing machine and dishwasher plus storage water heater; annual consumption 7500 kWh of which night 2500 kWh; power 6-9 kW

D<sub>e</sub> - as for D<sub>d</sub> plus all-electric system with water heater and electric central heating operating on a storage; annual consumption 20000 kWh of which night 15000 kWh; power 9 kW

#### Standardne porabniške skupine za industrijo – električna energija

I<sub>a</sub> - letna poraba 30 MWh, moč 30 kW

I<sub>b</sub> - letna poraba 50 MWh, moč 50 kW

I<sub>c</sub> - letna poraba 160 MWh, moč 100 kW

I<sub>d</sub> - letna poraba 1250 MWh, moč 500 kW

I<sub>e</sub> - letna poraba 2000 MWh, moč 500 kW

I<sub>f</sub> - letna poraba 10000 MWh, moč 2500 kW

I<sub>g</sub> - letna poraba 24000 MWh, moč 4000 kW

I<sub>h</sub> - letna poraba 50000 MWh, moč 10000 kW

I<sub>i</sub> - letna poraba 70000 MWh, moč 10000 kW

#### Standard consumers for industry – electricity

I<sub>a</sub> - annual consumption 30 MWh, power 30 kW

I<sub>b</sub> - annual consumption 50 MWh, power 50 kW

I<sub>c</sub> - annual consumption 160 MWh, power 100 kW

I<sub>d</sub> - annual consumption 1250 MWh, power 500 kW

I<sub>e</sub> - annual consumption 2000 MWh, power 500 kW

I<sub>f</sub> - annual consumption 10000 MWh, power 2500 kW

I<sub>g</sub> - annual consumption 24000 MWh, power 4000 kW

I<sub>h</sub> - annual consumption 50000 MWh, power 10000 kW

I<sub>i</sub> - annual consumption 70000 MWh, power 10000 kW

#### Standardne porabniške skupine za gospodinjstva – zemeljski plin

D<sub>1</sub> - kuhanje in priprava tople vode; letna poraba 8,37 GJ = 2326 kWh = 221 Sm<sup>3</sup> (GCV)

D<sub>2</sub> - kuhanje in priprava tople vode; letna poraba 16,74 GJ = 4652 kWh = 443 Sm<sup>3</sup> (GCV)

D<sub>3</sub> - kuhanje, priprava tople vode in centralno ogrevanje; letna poraba 83,70 GJ = 23260 kWh = 2241 Sm<sup>3</sup> (GCV)

D<sub>3b</sub> - kuhanje, priprava tople vode in centralno ogrevanje; letna poraba 125,60 GJ = 34860 kWh = 3323 Sm<sup>3</sup> (GCV)

D<sub>4</sub> - centralno ogrevanje bloka z najmanj 10 stanovanji; letna poraba 1047,00 GJ = 290750 kWh = 27698 Sm<sup>3</sup> (GCV)

#### Standard consumers for households – natural gas

D<sub>1</sub> - cooking and water heating; annual consumption 8,37 GJ = 2326 kWh = 221 Sm<sup>3</sup> (GCV)

D<sub>2</sub> - cooking and water heating; annual consumption 16,74 GJ = 4652 kWh = 443 Sm<sup>3</sup> (GCV)

D<sub>3</sub> - cooking, water heating and central heating; annual consumption 83,70 GJ = 23260 kWh = 2241 Sm<sup>3</sup> (GCV)

D<sub>3b</sub> - cooking, water heating and central heating; annual consumption 125,60 GJ = 34860 kWh = 3323 Sm<sup>3</sup> (GCV)

D<sub>4</sub> - central heating for multi dwelling houses with at least 10 dwellings; annual consumption 1047,00 GJ = 290750 kWh = 27698 Sm<sup>3</sup> (GCV)

#### Standardne porabniške skupine za industrijo – zemeljski plin

I<sub>1</sub> - letna poraba 418,6 GJ = 0,1163 GWh = 11,07 (1000 Sm<sup>3</sup> GCV)

I<sub>2</sub> - letna poraba 4186 GJ = 1,163 GWh = 110,7 (1000 Sm<sup>3</sup> GCV)

I<sub>3-1</sub> in I<sub>3-2</sub> letna poraba 41860 GJ = 11,63 GWh = 1107 (1000 Sm<sup>3</sup> GCV)

I<sub>4-1</sub> in I<sub>4-2</sub> letna poraba 418600 GJ = 116,3 GWh = 11065 (1000 Sm<sup>3</sup> GCV)

#### Standard consumers for industry – natural gas

I<sub>1</sub> - annual consumption 418,6 GJ = 0,1163 GWh = 11,07 (1000 Sm<sup>3</sup> GCV)

I<sub>2</sub> - annual consumption 4186 GJ = 1,163 GWh = 110,7 (1000 Sm<sup>3</sup> GCV)

I<sub>3-1</sub> in I<sub>3-2</sub> annual consumption 41860 GJ = 11,63 GWh = 1107 (1000 Sm<sup>3</sup> GCV)

I<sub>4-1</sub> in I<sub>4-2</sub> annual consumption 418600 GJ = 116,3 GWh = 11065 (1000 Sm<sup>3</sup> GCV)

#### Porabniška skupina za gospodinjstva – toplotna energija

D<sub>3b</sub> je porabniška skupina, ki porablja toplotno energijo za pripravo tople vode in centralno ogrevanje. Za porabniško skupino D<sub>3b</sub> je predvidena priključna moč 10 kW in letna poraba 34,9 MWh in se ujema s standardno porabniško skupino za zemeljski plin D<sub>3b</sub>.

**Bencin** je vsako hlapno mineralno olje, ki se uporablja kot pogonsko sredstvo za vozila z motorjem z notranjim izgorevanjem na vžig z iskro.

**Dizelsko gorivo** je težko mineralno olje za pogon dizel motorjev.

**Davek na dodano vrednost (DDV)** je znesek dajatev, ki jih ob prodaji plača kupec (izstopni davek). DDV se obračunava in plačuje po stopnji 20 %.

**Ekstra lahko kurilno olje (ELKO)** je zmes ogljikovodikov in je

#### Standard consumer for households – heat

D<sub>3b</sub> is the standard consumer that uses heat for water heating and central heating. For the standard consumer D<sub>3b</sub> the connecting power of 10 kW and the annual consumption of 34.9 MWh are foreseen, which corresponds to the standard consumer for natural gas D<sub>3b</sub>.

**Gasoline** is each volatile mineral oil used as the drive of the vehicle with the internal combustion engine with spark ignition.

**Diesel oil** is heavy mineral oil for the drive of the diesel engines.

**Value-added tax (VAT)** is a tax buyers pay at sale (output value added tax). The VAT rate is 20%.

**Light fuel oil (heating oil)** is the mixture of carbon and hydrogen and is

namenjeno za kurjenje v napravah za pridobivanje toplote za ogrevanje.

**Električna energija** je energija, ki jo pridobivamo z izgorevanjem fosilnih goriv, kot so premog, nafta in zemeljski plin. V drugo kategorijo pridobivanja električne energije spadajo jedrske elektrarne in hidroelektrarne.

**GCV** (gross calorific value) – zgorevalna toplota ali zgornja kalorična vrednost – je vsa pri zgorevanju sproščena toplota.

**Maloprodajna cena** je končna cena, ki jo plačajo potrošniki za nakup energentov. Vsebuje vse davke in preostale dajatve.

**NCV** (net calorific value) – kurilnost ali spodnja kalorična vrednost je tisti del zgorevalne toplote, ki jo dobimo, če dimne pline ohlajamo samo do temperature nad rosiščem vodne pare.

**Neosvinčeni motorni bencin** je bencin, ki se uporablja za pogon motorjev, primernih za uporabo neosvinčenega bencina, vključno z motorji z napravami za zmanjševanje količin škodljivih snovi. Ločimo neosvinčeni motorni bencin 95 oktanski (NMB 95) in neosvinčeni motorni bencin 98 oktanski (NMB 98).

**Standardni kubični meter** ( $\text{Sm}^3$ ) je masa plina, ki pri standardnem stanju (pri temperaturi pri  $15^{\circ}\text{C}$  in tlaku 1,01325 bar) zavzema prostornino  $1\text{m}^3$ .

**Taksa za obremenjevanje zraka z emisijo ogljikovega dioksida** (Taksa  $\text{CO}_2$ ) je taksa, ki se plačuje zaradi emisije  $\text{CO}_2$  v zrak kot posledica rabe goriv in sežiganja gorljivih organskih snovi in je v celoti prihodek proračuna RS.

**Toplotna energija (daljinsko ogrevanje)**. Segreta sanitarna voda za naselje ali za več sosednjih stavb ali za večstanovanjsko stavbo se pripravlja na enem samem mestu v naselju ali zunaj tega naselja ali v bližini ali v eni od sosednjih stavb ali v večstanovanjski stavbi na enem mestu.

**Trošarina** je davek na določeno blago, vključujoč alkohol, tobak, bencin in kurilno olje. Trošarina se plačuje od trošarinskih izdelkov, proizvedenih na območju Republike Slovenije (RS) in trošarinskih izdelkov, ki se uvozijo v RS. Prihodki od trošarin pripadajo proračunu RS.

**Zemeljski plin** je fosilno gorivo v plinastem stanju, namenjeno za kuhanje in ogrevanje prostorov. Poraba plina se meri s plinomeri v  $\text{Sm}^3$ .

#### Objavljanje podatkov

Dvakrat letno: Statistične informacije. Energetika

used in heating systems for warmth and heat.

**Electricity** is energy that is obtained by burning fossil fuels such as coal, oil and natural gas. The second category of obtaining electricity covers nuclear power plants and hydroelectric power plants.

**GCV** (gross calorific value) measures the total amount of heat produced by fuel combustion.

**Retail price** is the final selling price which customers pay to purchase an energy product. It includes all taxes as well as all other duties.

**NCV** (net calorific value) measures the amount of heat that can be used. The other part is used for evaporation of fuel moisture.

**Unleaded motor gasoline** is gasoline used for driving engines suitable for using unleaded gasoline, including engines with devices for reducing the quantity of harmful substances. We distinguish between unleaded 95-octane motor gasoline (UMG 95) and unleaded 98-octane motor gasoline (UMG 98).

**Cubic meter standard** ( $\text{Sm}^3$ ) is the mass of gas that at standard conditions (temperature of  $15^{\circ}\text{C}$  and pressure of 1,01325 bar) occupies  $1\text{m}^3$  of volume.

**Tax on  $\text{CO}_2$  emissions** ( $\text{CO}_2$  tax) is tax that is paid because of using fuels and burning combustible organic substances. This tax is fully the revenue of the national budget.

**Heat (district heating)** is heating of the water where heated water in the settlement or in several neighbouring buildings or in a building with several dwellings is prepared in one place in this settlement or outside of this settlement or in one of the buildings nearby or in one place in this building.

**Excise duties** are duties on certain goods, including alcohol, tobacco, petrol and fuel oil. Excise duties are paid from products produced in the Republic of Slovenia and from products imported in the Republic of Slovenia. The revenue from excise duties belongs to the national budget.

**Natural gas** is a fossil fuel in gaseous state, used for cooking and heating spaces. Gas consumption is measured with gas meters in  $\text{Sm}^3$ .
