## P R E D G O V O R

Register raka za Slovenijo posluje že od leta 1950 na podlagi tedaj izdane uredbe o obveznem prijavljanju raka v naši republiki. Z novim zakonom o zdravstvenem varstvu in o zdravstveni službi v SR Sloveniji (Ur. l. SRS, št. 14-151/65) ter s pravilnikom o prijavi in kontrolli rakavih bošnjakov in o drugih tehničnih vprašanjih boja proti raku (Ur.l. SRS, št. 4-36/66), Izdanim na podlagi navedenega zakona, je ostala zakonska obveznost za prijavljanje rakavih obolenj še nadalje v veljavi; sistem prijavljanja, registracije in evidence teh obolenj pa se je še izpolnil. S temi akti sta hkrati zakonsko zajamčena tudi obstoj in poslovanje Registrja raka za Slovenijo v okviru Onkološkega inštituta v Ljubljani, žal pa s tem niso zajamčena tudi potrebna finančna sredstva. Toliko v pojasnilo ob morebitnih očitkih, da Register raka ne izpolnjuje v polni meri vseh svojih nalog.

Letna poročila o Incidenci raka v naši republiki s podrobnejšimi komentarji smo prva leta (1951-1955) razmnoževali na ciklostilu ter jih dostavljali vsem bolničnicam in republiškim zdravstvenim organom. V letu 1957 smo izdelali obsežnejše poročilo o incidenci raka in preživetju rakavih bošnjakov za celotno petletno obdobje 1950-1955. To poročilo smo izdali tudi v angleškem jeziku v posebni, tiskani publikaciji: "Cancer in Slovenia, 1955", Oncological Institute, Ljubljana, 1957. Zaradi finančnih težav smo nadaljnja letna poročila, ki so obsegala le osnovne podatke o Incidenci raka, pripravljali samo za republiški in zvezni zavod za zdravstveno varstvo in jih prek njiju dostavljali tudi Svetovni zdravstveni organizaciji. Le-ta jih je objavljala v svoji periodični publikaciji: "Epidemiological and Vital Statistics Report" (Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967). Z našimi podatki o Incidenci raka v Sloveniji v letih 1956-1960 in v letih 1961-1965 pa smo dali svoj prispevek tudi za knjigo: "Cancer Incidence in Five Continents", UICC, Geneva, (Vol. I - 1966, Eds. Doll, R., Payne, P., Waterhouse J.; Vol. II - 1970, Eds. Doll, R., Muir, C. X., Waterhouse, J.). Vse te publikacije pa so širšemu krougu naših zdravstvenih delavcev le težko dostopne. Ker pa je zanimanje naših strokovnjakov in znanstvenih delavcev za podatke o pogostnosti raka pri nas vedno večje in vedno več povprašujejo po njih, smo se odločili, da bomo v okviru naših možnosti letna poročila spet razmnoževali in jih razpošljali zainteresiranim zdravstvenim zavodom v Sloveniji in v drugih republikah. Tako smo že izdali poročili o Incidenci raka v Sloveniji za 1965 in 1966 leto. Sedanje poročilo prikazuje na enak način in z istih vladikov kot prejšnji Incidenco raka v naši republiki v letu 1967. Poročila so prirejena tudi za tuje Interesente.

V tabelah, ki jih podajamo v poročilu, so zajeti osnovni številčni podatki o Incidenci raka v Sloveniji v letu 1967 (po spolu, starosti, lokalizaciji in stadiju ob diagnozi) ter kazalci, ki osvetljujejo zanesljivost podatkov, kot so: odstotek primerov registriranih samo na podlagi potrdil o smrti ter odstotek mikroskopsko (citoško ali histološko) potrjenih primerov. K vsemu temu dodajamo še podatke o številu novih primerov raka v obravnavanem letu, ugotovljenih v posameznih bolničnicah, kar bi utegnilo zanimati zdravnike vseh teh bolničnic glede na njihovo obveznost prijavljanja rakastih obolenj.

### Pojasnilo

Incidenca pomeni število v enem koledarskem letu na novo ugotovljenih primerov raka, ki jih Registrju prijavijo bolničnice (izjemno zdravstveni domovi, tj. v primerih, ko bošnjak z ugotovljenim rakom zaradi kakšnegakoli razloga ni napoten v bolničnico ali sam to odklanja) plus število v istem letu umrlih, pri katerih je bil rak ugotovljen že ob smrti in poprej niso bili prijavljeni Registrju. Stopnjo Incidence, tj. število novih primerov raka na 100.000 prebivalcev v letu 1967, je možno izračunati iz podanih absolutnih številk o novih primerih raka v tem letu (tabela 2) v odnosu na ocenjeno število prebivalstva v sredini tega leta (tabela 1).

Naš podatki vključujejo le bošnjake, ki imajo stalno bivališče na ozemlju SR Slovenije. V teh podatkih torej niso vključeni bošnjaki, ki stalno prebivajo v drugih republikah ali izven naše države, čeprav so se zdravili zaradi raka v bolničnicah na področju Registrja.

Pojasnil k posameznim tabelam ne podajamo, ker menimo, da so dovolj nazorne. Na voljo pa smo vsakomur, ki bi želel podrobnejše obrazložitve.

### Zahvala

Ob tej priložnosti se ponovno zahvaljujemo vsem zdravnikom in administrativnemu osebju splošnih in specialnih bolničnic, klinik in inštitutov, kakor tudi zdravnikom v osnovni zdravstveni službi, ki so vestno izpolnjevali zadolžitve zakonskih predpisov glede prijavljanja in kontrole rakavih obolenj ter s tem prispevali k realnejšemu prikazu obolenosti za rakom v naši republiki. To je edina trdna osnova, ki nam omogoča ustrezeno načrtovanje boja proti raku in ustrezena ukrepa proti tej bolezni v republiškem obsegu.

Ljubljana, julija 1970

Za register raka  
prof. dr. Božena Ravnhar

## FOREWORD

The Cancer Registry of Slovenia is operating since 1950 as a unit of the Institute of Oncology, Ljubljana. The Registry is population-based as cancer notification is compulsory in the Socialist Republic of Slovenia.

In the first years of the Registry's operation (1951-1955) the annual reports on cancer incidence in Slovenia have been prepared in cyclostyle and distributed to all health institutions in Slovenia and to the competent state health authorities. In 1957 a special printed publication was issued in a limited number of copies. The publication comprised incidence data and end results in cancer for the period 1950-1955 (Ravnihar, B. & staff of the Registry: Cancer in Slovenia, 1955, Oncological Institute, Ljubljana, 1967). Since then, because of personnel and financial obstacles, the annual reports have been prepared for the republic and federal health authorities only, and through them submitted to the World Health Organization for publication in the periodical: Epidemiological and Vital Statistics Report (Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967). Further, the Registry contributed cancer incidence data of Slovenia for the period 1956-60, and 1961-65, resp., for the publication: Cancer Incidence in Five Continents, UICC, Geneva (Vol. I-1966, Eds. Doll, R., Payne P., Waterhouse J., and Vol. II-1970, Eds. Doll, R., Muir, C.S., Waterhouse, J.). As the publications issued abroad are not available to the majority of the Slovene medical profession, we decided to issue annual reports again and in the present form, within the range of our possibilities. The reports are first of all meant for health institutions and the medical profession in Slovenia who are supplying the Registry with the necessary data. The tables are fitted with headings in English for the use of professional people and scientists abroad.

Up till now two such reports have been issued, i.e. for the year 1965 and 1966. In the same way as these two reports the present one deals with cancers ascertained in 1967.

In the tables the basic figures on new cancer cases diagnosed in 1967 in Slovenia are presented, according to sex, age, site and stage at diagnosis, as well as figures which in some way illustrate the reliability of our cancer incidence data, i.e. the proportion of cases registered from death certificates only, and the proportion of microscopically (cytologically and histologically) confirmed cases. In addition, the number of new cases by the reporting hospitals is given what might be of special interest to the hospital medical staff who are charged with notification work.

### Comments:

The incidence is defined as the number of cancer cases diagnosed during the relevant year, plus the number of deceased with cancer during the same year who had not been reported to the Registry as cases before. The cancer incidence rate, i.e. the number of new cancers per 100,000 population in the year 1967 can be calculated from the given absolute figures on new cases in this year (Table 2) in relation to the figures of the midyear population estimates for Slovenia in 1967 (Table 1).

The presented data refer only to the residents of Slovenia. The non-residents, although they have been treated in the hospitals of the Registry's area, are not included in the report.

Ljubljana, July 1970

Dr. Božena Ravnihar, Professor  
Head of the Registry
