

International Conference for ICT, Electronics & Mechatronics

IKTEM 2021, Proceedings of Lectures

**Mednarodna konferenca
IKTEM 2021**
17. junij 2021

Razpored predavanj:

9.00 – 9.30	Konferenca	
10.00 – 10.30	Priljubljen organizatorja	
10.30 – 10.30	Sklepi	
10.30 – 10.40	Priljubljen Organizator (PRA) uvodna z govornimi grinorami predstavitev za C&M vsebino	Enilgora Borajnc
10.40 – 11.00	25	Turmal, Refai, Gorenfel
11.00 – 11.30	Čestitke obilnice mladim	
11.30 – 11.30	IKEM 2021	Gregor Kibicki, Danilo Črnčič, ERM Maršič
11.30 – 11.35	Priljubljen Aplikator (PRA) uvodna z govornimi grinorami predstavitev za C&M vsebino	Enilgora Borajnc
11.35 – 11.45	25	Matej Šušter
11.45 – 11.45	25	ZT Gregor Spajnerič
11.45 – 12.00	Konferenca	
12.00 – 12.15	Sklepi	
12.15 – 12.30	Vizualizacija na Linexu	Žiga Lovrenčan, Primož Koroš
12.30 – 12.45	500 2021	Dr. Mihael Jurešič
12.45 – 13.00	Upravljanje 2D/3D modelov pri Formici d.o.o.	Jana Pijavc, Tilen Klavžar
13.00 – 13.15	Mednarodna konferenca	Uroš Gregor
13.15	Zaključek predavanj

Dear Colleagues,

on behalf of Organizing Committee I warmly welcome you at IKTEM 2021 conference.

Firstly I'd like to thank to Faculty for Electronics from Ljubljana, ICT chair prof. Janez Bešter for their help at organizing the conference.

Also we'd like to thank to our sponsors that have supported us regardless strange Covid-19 situation.

And we'd like to thank to all lecturers who have prepared interesting lectures.

I'd like to say few words about IKTEM conference. IKTEM is being organized by Svet elektronike and Svet mehatronike magazines with a help of Faculty for Electronics from Ljubljana, Faculty for Electronics and Computing from Maribor and Slovenian Chamber of Commerce of which we thank Electronics and Electrical Industry Associations as well as Chamber of Business Services of Slovenia.

IKTEM 2021 venue was planned to be Rogla – as in the 2019 however, due to Covid-19 situation we have made it virtually via Zoom platform.

The conference brought many interesting lectures from the fields of ICT, electronics and mechatronics. All presentations are joint in this Proceedings of Lectures, while videos taken from presentations can be seen at Svet elektronike Youtube channel.

*Jurij Mikeln, B.Sc.E.E., President of the IKTEM Organizing Committee

Kaj prinaša omrežje
majhnih satelitov
Starlink?

Univerza v Ljubljani
Fakulteta *za elektrotehniko*

Katedra za **IKT**
LSO Laboratorij za
sevanje in optiko

Pričetki projekta Starlink

- Starlink je globalno satelitsko komunikacijsko omrežje, ki ga razvija ameriško podjetje SpaceX.

(Space Exploration Technologies Corporation)

Januarja 2015 v Seattlu lastnik podjetja SpaceX Elon Musk na odprtju podružnice SpaceX Seattle prvič predstavi satelitski projekt Starlink.

<https://www.youtube.com/watch?v=AHeZHyOnsm4>

STARLINK

<https://www.starlink.com/>

Ambiciozni projekt bo v vesolju vzpostavil globalno satelitsko internetno omrežje, ki bo

- sposobno prenesti večino (cilj je 50%) internetnega prometa na dolgih razdaljah in
- okrog 10% lokalnega internetnega prometa nekega (ruralnega) območja.

Utirjanje satelitov

[https://commons.wikimedia.org/wiki/File:Starlink_Mission_\(47926144123\).jpg](https://commons.wikimedia.org/wiki/File:Starlink_Mission_(47926144123).jpg)

- Nosilna raketa Falcon 9 (značilna po ponovni uporabi).
- Po vstavitvi v tirnico sateliti letijo skupaj, potem se razpršijo na različne položaje v tirnicah nad Zemljo.

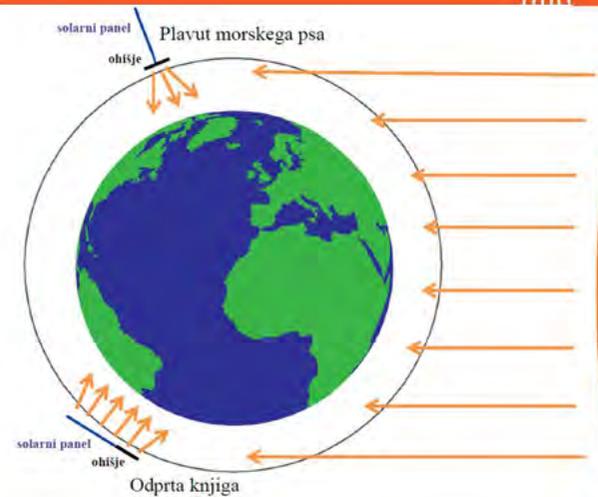

22. februar 2019	2 satelita
24. maj 2019	60 satelitov
11. november 2019	60 satelitov
7. januar 2020	60 satelitov
29. januar 2020	60 satelitov
17. februar 2020	60 satelitov
18. marec 2020	60 satelitov
22. april 2020	60 satelitov
18. maj 2020	60 satelitov
⋮	
26. maj 2021	60 satelitov

izstreljenih 1737
(1635 v tirnici)

Večerne lučke na nebu

- Kolona svetlih satelitov, potujočih čez večerno nebo.
- Prvih 60 satelitov (24. maj 2019) je bilo zelo vidnih in povzročilo zgražanje pri astronomih, ki so projekt označili kot bizaren, saj naj bi imel negativne posledice za prihodnost astronomskih raziskav.

- Sateliti so vidni, ko proti Zemlji odbijejo sončno svetlobo.
- Sateliti v nizkih tirnicah so vidni le zvečer in zjutraj, oddaljeni sateliti so vidni tudi ponoči.
- Ukrep je bil temen premaz na spodnji strani satelita, ki zmanjša odsev.

Tveganje nezgode

<https://spectrum.ieee.org/tech-talk/aerospace/satellites/the-odds-that-one-of-spacex-internet-satellites-will-hit-someone>

- Sestava prvih Starlink satelitov je zaradi
 - SiC laserskih zrcal,
 - vztrajnikov iz nerjavečega železa,
 - ionskega pospeševalnika iz titana in železa,
- imela riziko za človeško žrtev 1:18.200, kar je nad ESA in NASA zahtevami, ki znašajo 1:10.000.
- FCC je marca in junija 2017 izračunal skupno tveganje za človeško žrtev.

$11.927 \text{ satelitov} \div 6 \text{ let} = 1.987 \text{ satelitov / leto} \div 365 \text{ dni} = 5,4 \text{ satelita / dan}$

skupno število satelitov

življenjska doba satelita

vsake 6 let bo ranjen ali ubit en zemljan!

- SpaceX se je branil s tem, da vsak dan na Zemljo pade med 62 in 242 meteoritov težjih od 10 g.
- Po sestanku med SpaceX in FCC (marec 2019) je SpaceX obljubil preoblikovanje satelite tako, da v celoti izgorijo v ozračju. Zato je znižal maso iz 386 kg na 260 kg.

<https://spectrum.ieee.org/tech-talk/aerospace/satellites/spacex-claims-to-have-redesigned-its-starlink-satellites-to-eliminate-casualty-risks>

Svetlobni signal po optičnem vlaknu z lomnim količnikom $n=1,5$ prepotuje razdaljo od Ljubljane do Amsterdama (1250 km) v času

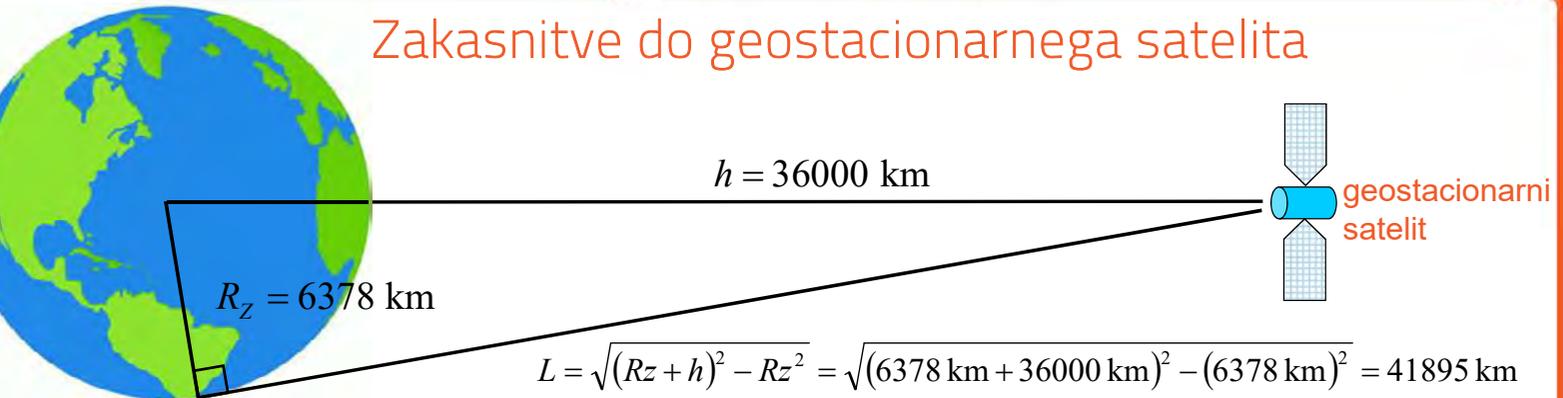

$$t = \frac{L}{\frac{c_0}{n}} = \frac{1250 \text{ km}}{2 \cdot 10^8 \text{ m/s}} = 4,17 \text{ ms}$$

Ljubljana – Amsterdam – Ljubljana

$$2t = \underline{\underline{8,3 \text{ ms}}}$$

Procesiranje signala v telekomunikacijskih napravah predstavlja bistven del zakasnitve signala.

Zakasnitive do geostacionarnega satelita

- Zakasnite za opazovalca, ki ima geostacionarni satelit v nadglavišču (zenitu).

$$t_{zenit} = \frac{h}{c_0} = \frac{36000 \text{ km}}{3 \cdot 10^8 \text{ m/s}} = 120 \text{ ms}$$

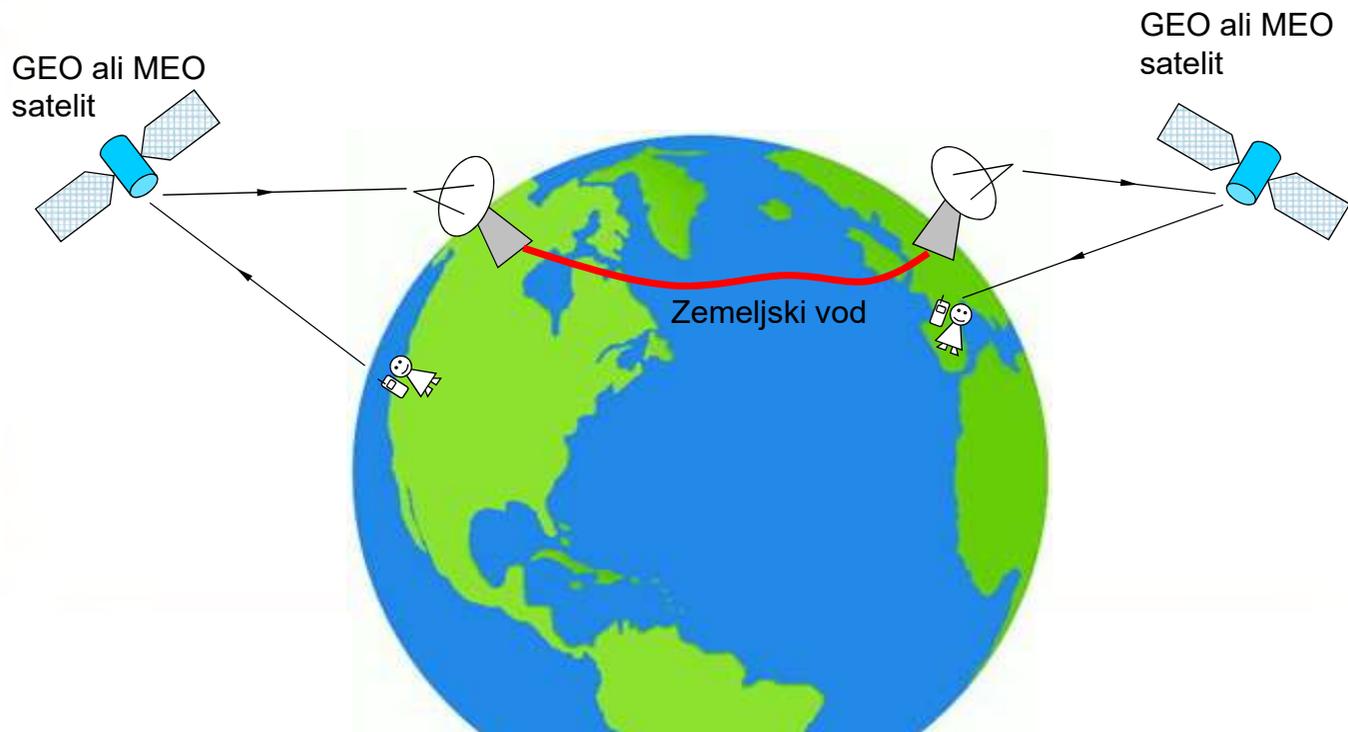

$$2t_{zenit} = 240 \text{ ms}$$

- Zakasnite za opazovalca, ki ima geostacionarni satelit na obzorju (horizontu).

$$t_{horizont} = \frac{L}{c_0} = \frac{41895 \text{ km}}{3 \cdot 10^8 \text{ m/s}} = 140 \text{ ms}$$

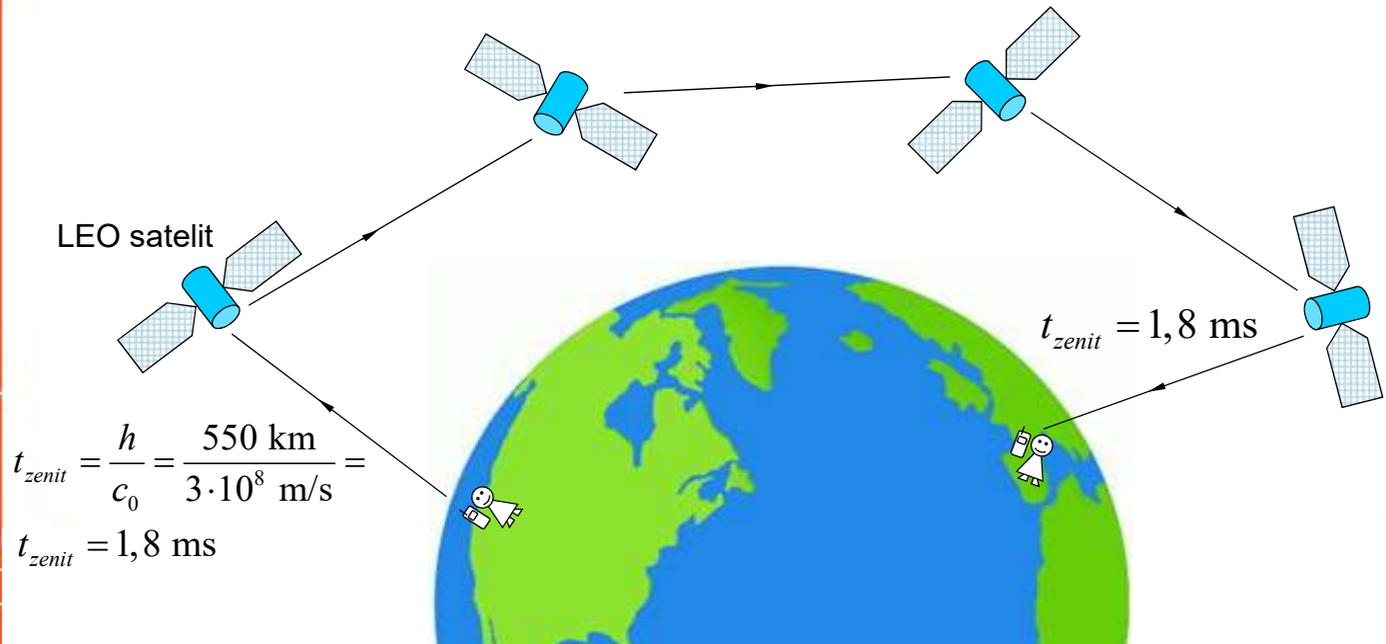

$$2t_{horizont} = 280 \text{ ms}$$

Zakasnitve pri omrežju brez medsatelitskih povezav

Zakasnitve pri omrežju z medsatelitskimi povezavami

- V vesolju je potrebno **manj vozlišč**, da informacija prispe na cilj.
- Elektromagnetno valovanje potuje po vakuumu s 3/2 večjo hitrostjo, kot po optičnem vlaknu.

Primerjava zakasnitev v optičnem in LEO satelitskem omrežju

- Elektromagnetno valovanje potuje po vakuumu s 3/2 večjo hitrostjo, kot po optičnem vlaknu.

- Uporaba optičnega vlakna z najkrajšo razdaljo med A in B

$$t_{AB} = \frac{L}{\frac{c_0}{n}} = \frac{nL}{c_0}$$

- Uporaba Starlinka s satelitom v zenitu in najrajše medsatelitske povezave med A in B

$$t_{AB} = \frac{L}{c_0} + 2 \frac{h}{c_0}$$

$$t_{AB} = \frac{nL}{c_0} = \frac{L + 2h}{c_0}$$

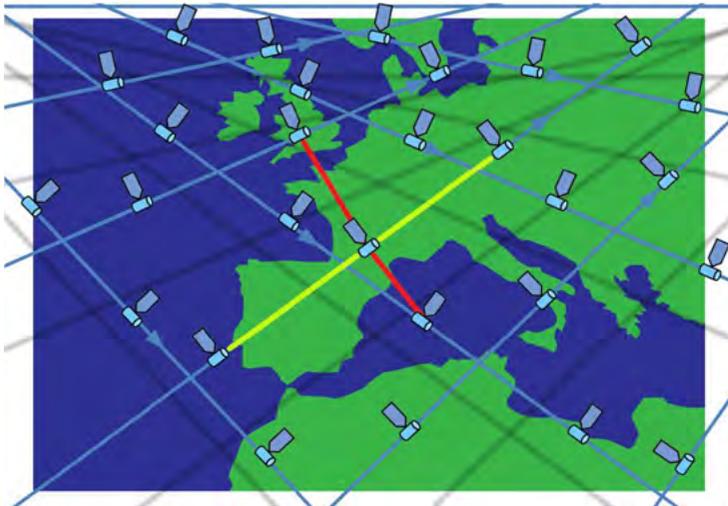

$$nL = L + 2h$$

$$L(n-1) = 2h$$

$$L = \frac{2h}{(n-1)} = \frac{2 \cdot 550 \text{ km}}{(1,5-1)} = \frac{1100 \text{ km}}{0,5} = 2200 \text{ km}$$

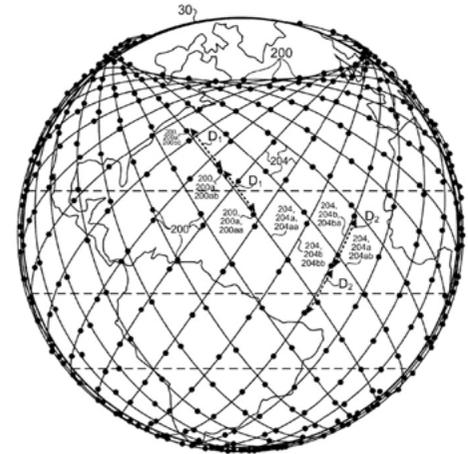

- Na dolge razdalje bo hitreje preko satelita Starlink v LEO, kot preko direktnega optičnega vlakna.
- Za natančen izračun je potrebno upoštevati:
 - Realne razdalje med sateliti (glej članek prof. Mark Handley "Delay is Not an Option: Low Latency Routing in Space") <https://dl.acm.org/doi/10.1145/3286062.3286075>
 - Zakasnitve v optičnih vozliščih, ki lahko predstavljajo povišanje zakasnitve za več kot 50%.

Vesoljski segment

- medsatelitske zveze

- 22 satelitov v vsaki od 72 tirnic.

- Patent „Satellite constellation“

Vir: <https://patents.google.com/patent/US9973267B2/en>

Vir: <https://www.maxval.com/blog/featured-technologies-starlink-constellation/>

Zaključki

- Večino globalnega internetnega prometa bo najverjetneje nemogoče prevzeti.
- Starlink ne bo primeren za gosto poseljena področja (priznava Elon Musk), ker si zmogljivost enega satelita deli preveč uporabnikov.
- Zakasnitve v omrežju niso resen problem:
 - Sateliti so na nizki tirnici (bližnje kot Stuttgart)
 - Hitrost EM valovanja je večja, kot po optičnem vlaknu.
 - Na vmesni poti bo manj vozlišč, kot pri optičnem omrežju. Sateliti ne bodo delovali kot klasična vozlišča na Zemlji, ki pridelajo veliko zakasnitve na račun usmerjanja paketa. Usmerjevalni algoritmi bodo vnaprej poznani.
- Starlink bo reševal tudi ozko grlo v sedanjem omrežju, ki so zadnji kilometri do uporabnika.
- Starlink bo globalno internetno omrežje, ki bo prevladujoče (dominantno) v svojem segmentu.

International Conference for ICT, Electronics & Mechatronics IKTEM 2021

NB-IoT or LTE-M?

- Bostjan Snoj – A1 Slovenia

Basic definitions, what are NB-IoT and LTE-M

- Cellular IoT: 2G, 3G, 4G, NB-IoT, LTE-M
- NB-IoT and LTE-M are both cellular technologies standardized by 3GPP,
- both are developed for Low Power Wide Area Network (LPWAN) type of devices,
- usually battery powered (Low Power),
- having in mind longer range and deeper in-house penetration (Wide Area),
- both are part of 4G technology,
- and will continue to be the basic IoT technologies in the 5G (future proof).

- From cost perspective: low price because of low module complexity.
- Both inherit privacy and security policy to which we are used to from LTE.
- Number of IoT devices foreseen tens of billions till 2025

Basic definitions, what are NB IoT and LTE-M

- Both are suitable technologies for M2M solution development,
- are designed for low data transfer rates,
- used to operate in hard reaching areas / environments,
- replacing 2G and 3G technologies.
- Both use operator's licensed spectrum,
- which can guarantee QoS,
- 3GPP Release 14 compliant in A1 network (feature reach).

Looks like they are mirror image one of the other? Right?

- Let's find key differences among all common features.

Key differences between NB-IoT and LTE-M

- Voice over LTE and SMS

	NB-IoT	LTE-M
VoLTE	No	Provider specific
SMS	Yes	Yes
Mobility support	No	Yes
Bands	B3, B20	B3, B20
In-house penetration	Excellent	Good

- VoLTE If needed it will be available at A1 network.
- Mobility: no handover for NB IoT!

Key differences between NB-IoT and LTE-M

- Transfer Rate and Bandwidth

	NB-IoT	LTE-M
Bandwidth	180kHz	1,4MHz
Speed DL	<100kbps	300kbps
Speed UL	<100kbps	370kbps

- Use Case dependant! Think about how to reduce amount of data to transfer!

Key differences between NB-IoT and LTE-M

- Network

	NB-IoT	LTE-M
Number of Connections	Max every 15min	No limit
Connection mode	Half Duplex	Full Duplex
Latency	1s – 60s	50-100ms
Standard IP protocols	No	Yes
Need for special protocols	Yes	No need

Key differences between NB-IoT and LTE-M

- Functions

	NB-IoT	LTE-M
Static IP V4	Yes	Yes
S2S VPN	Yes	Yes
Private Radius	Yes	Yes
IP V6 support	Available soon in A1 network	Available soon A1 network

Key differences between NB-IoT and LTE-M

- Functions

	NB-IoT	LTE-M
Remote control	Yes/No (UC dep.)	Yes
Firmware updates	No	Yes
Grow with UCs	No	Yes

- Remote control for some non critical actions available in NB-IoT.
- Small speed and protocol specific requests in NB-IoT restrict FW upgrades.
- Since no updates available, it is not possible to grow with Use Cases

Key differences between NB-IoT and LTE-M

- Reference Signals Received Power (RSRP)

	NB-IoT	LTE-M
RSRP Excellent Signal Strength	>-90 dBm	>-85 dBm
RSRP Good Signal Strength	-90 dBm to -105dBm	-86 dBm to -100 dBm
RSRP Fair Signal Strength	-106 dBm to -116 dBm	-101 dBm to -112 dBm
RSRP Poor Signal Strength	-117 dBm to -121 dBm	-113 dBm to -120 dBm
RSRP Dead Signal Strength	<-122 dBm	<-121 dBm

Key differences between NB-IoT and LTE-M

- Reference Signal Received Quality (RSRQ)

	NB-IoT	LTE-M
RSRQ Excellent Signal Quality	>-9 dB	>-9 dB
RSRQ Good Signal Quality	-9 dB to -12 dB	-9 dB to -12 dB
RSRQ Fair to Poor Signal Quality	<-13 dB	<-13 dB

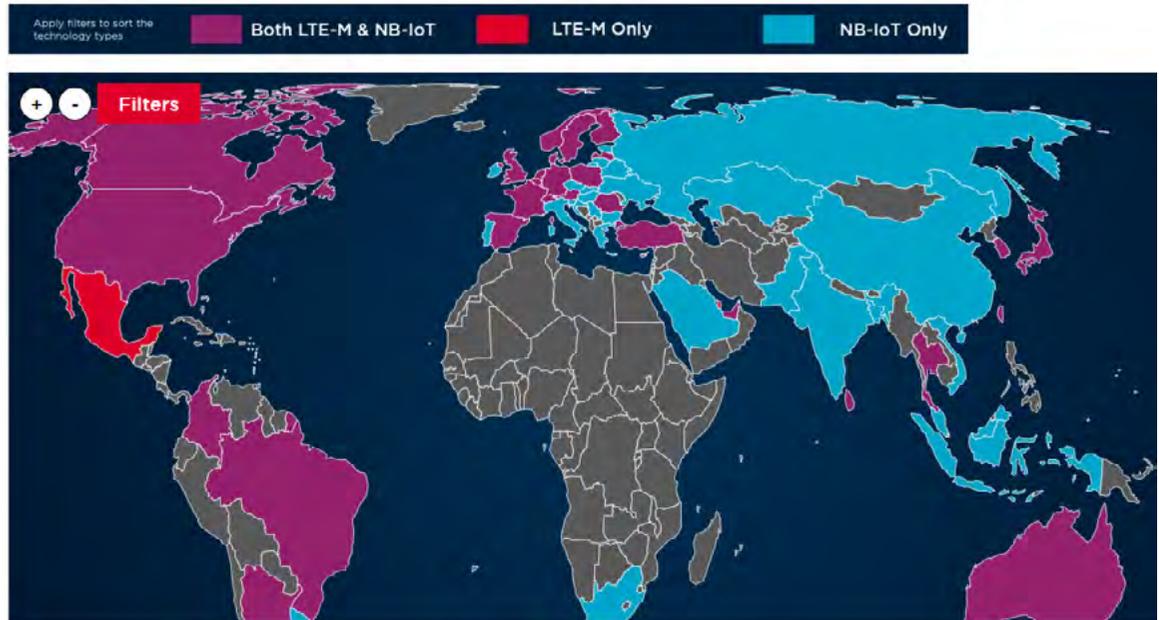

Key differences between NB-IoT and LTE-M

- Functions

	NB-IoT	LTE-M
First focus - Europe	Yes	
Secondary focus - Europe		Yes
First focus - North America		Yes
Secondary focus - North America	Yes	
First focus - Asia	Yes	
Secondary focus - Asia		Yes

Mobile IoT Deployment Map (source: GSMA, Jun 2021)

Source: <https://www.gsma.com/iot/deployment-map>

A1

Typical mistake when deciding NB-IoT or LTE-M TCP for NB-IoT

- **Using TCP protocol for NB-IoT technology**
 - NB-IoT in theory supports both TCP and UDP protocols. But this is misleading!
 - NB-IoT facts:
 - High Latency
 - Half Duplex connection
 - UE attach delays
 - TCP facts:
 - sensitive to delays
 - Sensitive to packet losses during data transmission
 - Slower than UDP
- Solution:
 - If retransmission of lost packets on transport layer is absolutely necessary, than consider moving to LTE-M.
 - Use UDP (and resolve the packet loss on application level if needed).
- A1 measurement: UDP packet loss <1%, TCP packet loss can become quickly over 90%

Typical mistake when deciding NB-IoT or LTE-M

- **Server side on UE over NB-IoT technology**
 - It is not battery friendly solution (draining batteries, no deep sleep possible)
 - Delays over the network may result in packet loss during high buffer loads in network
- Solution:
 - Move to LTE-M
 - Redesign the application to have a client on UE side

Typical mistake when deciding NB-IoT or LTE-M

- **Sending data in short intervals over NB-IoT**
 - NB-IoT facts:
 - Slow speed
 - Latency
 - No retransmission of lost packets is possible on transport level
 - Data may be generated faster, than we are possible to flush them over NB-IoT
- Solution:
 - Move to LTE-M.
 - Redesign the application not to be so brutal sending data.

Good practice

- Use appropriate protocols if working on NB-IoT:
 - CoAP (UDP)
 - (CoAP)/LWM2M (UDP)
 - MQTT-SN (designed to use UDP)
- Reboot:
 - There is a lot of Software running inside User Equipment. Therefore there is no guarantee, that code is bug-free. Consider periodical rebooting if there is a large number of IoT devices with no management option.
- Fall back:
 - Detect abnormal SW behaviour and enable fall-back scenario (wake up in minimal maintenance mode)
- Antenna design:
 - Antenna design is underestimated. Antenna with high gain, optimal radiation diagram is half of a success in harsh RF conditions.

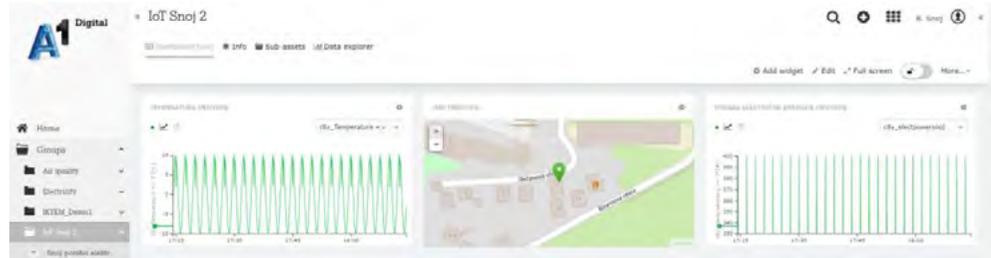

Conclusion

- LTE-M will emerge faster and faster since it is easier for application development and maintaining, having always the door open for easy new Use Cases introduction.
- NB-IoT is here now and that is the fact. Since it was available prior to LTE-M in EU, it has a bit of advantage in terms of commercial progress . NB-IoT will stay mainly for the simple applications on larger scale. For example sensors and meters, where functional requirements are firmly defined at the beginning of the project, and are not subject to change and where deeper in-house penetration and wider range is absolutely necessary.
- Think about your Use Case and use appropriate technology. After deploying thousands of IoT devices, there is no way back! Consider even supporting both technologies for the same Use Case.

Cumulocity IoT platform on Exoscale cloud

Development environment

- Quectel is giving development boards for BG95-M3 development (EVB Kit).
- A1 is giving NB-IoT and LTE-M test SIM cards, to use them with EVB.
- A1 is giving test access to Cumulocity to store and visualize data received from IoT devices.
- Cumulocity and SIM test period is 2 months (with possible extension)
- Submit your requests to:

<https://pametneresitve.si/iktem-2021/>

LTE-M launching in A1 network

A1 will launch LTE-M technology to be available in complete A1 network in **JULY 2021!**

Thank you!

Face mask detection

D. Zimšek, G. Močnik

Laboratory for
Digital Signal Processing
UM FERl Maribor

Content

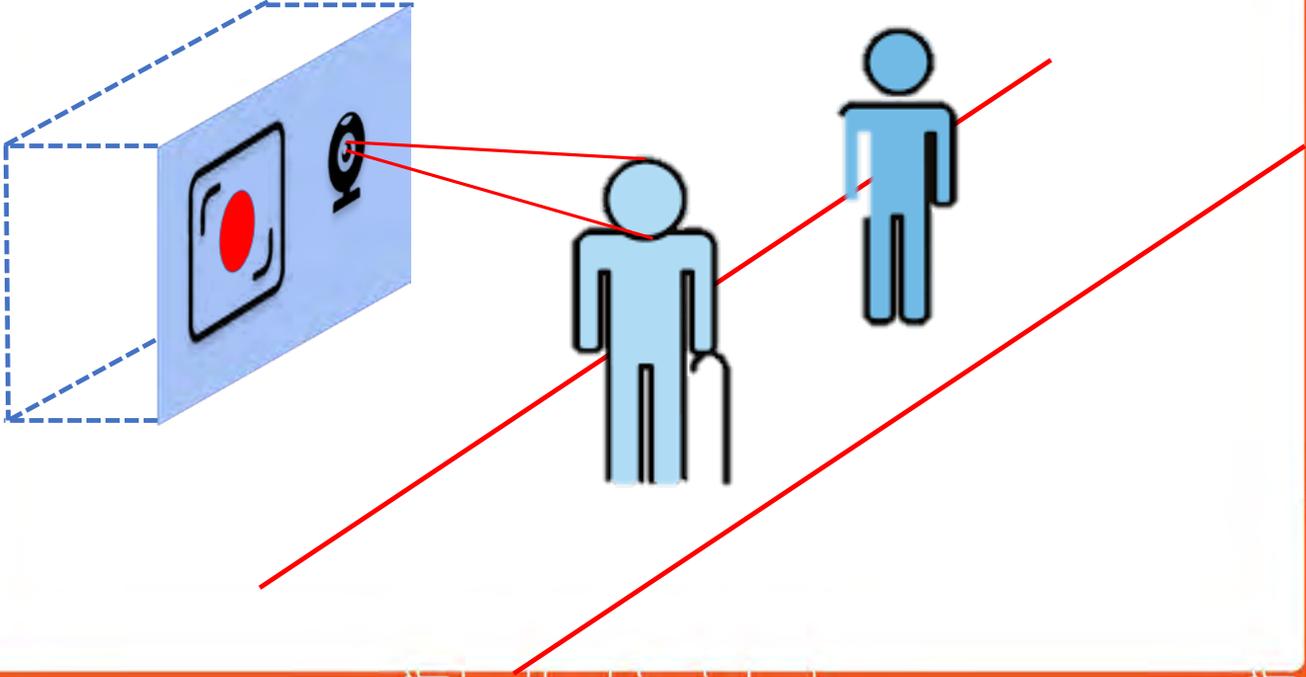

- Introduction
- Computer vision
 - Techniques
- Learning techniques
- Dataset of faces and faces with masks
- Hardware
- Results
- Conclusion

Introduction

To confine the spread of Covid-19, the government has issued a decree to wear masks indoors. Students are required to wear masks when physically attending classes.

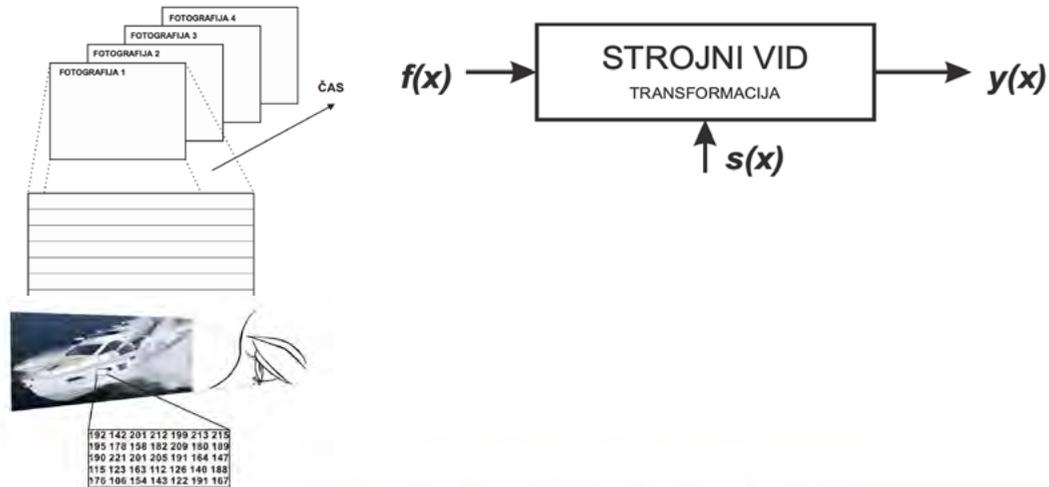

At our faculty, we made a device that checks if everyone who enters through the main door has a mask on their face and if the mask is worn correctly.

Face mask detection system design

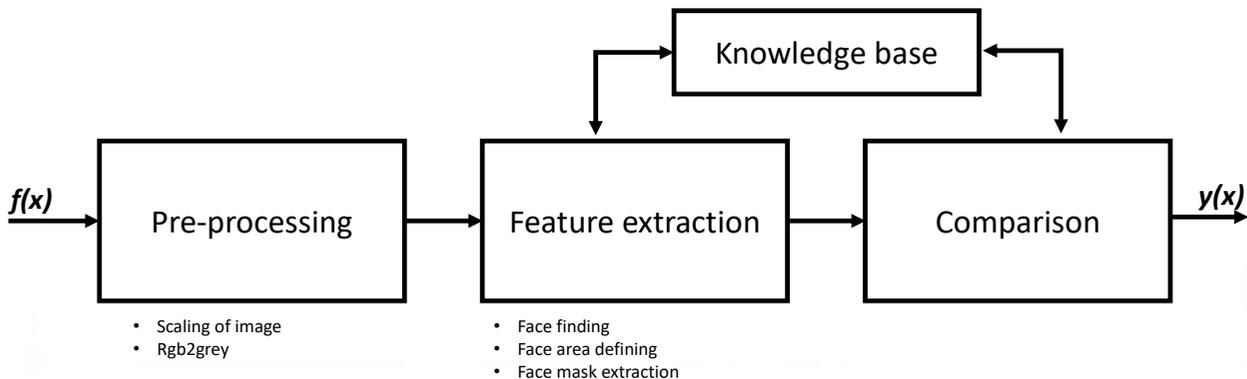

Computer vision

- The input signal is a video stream from the camera. Using computer vision we find key information in a digital image, with which we make decisions and influence the output signal.

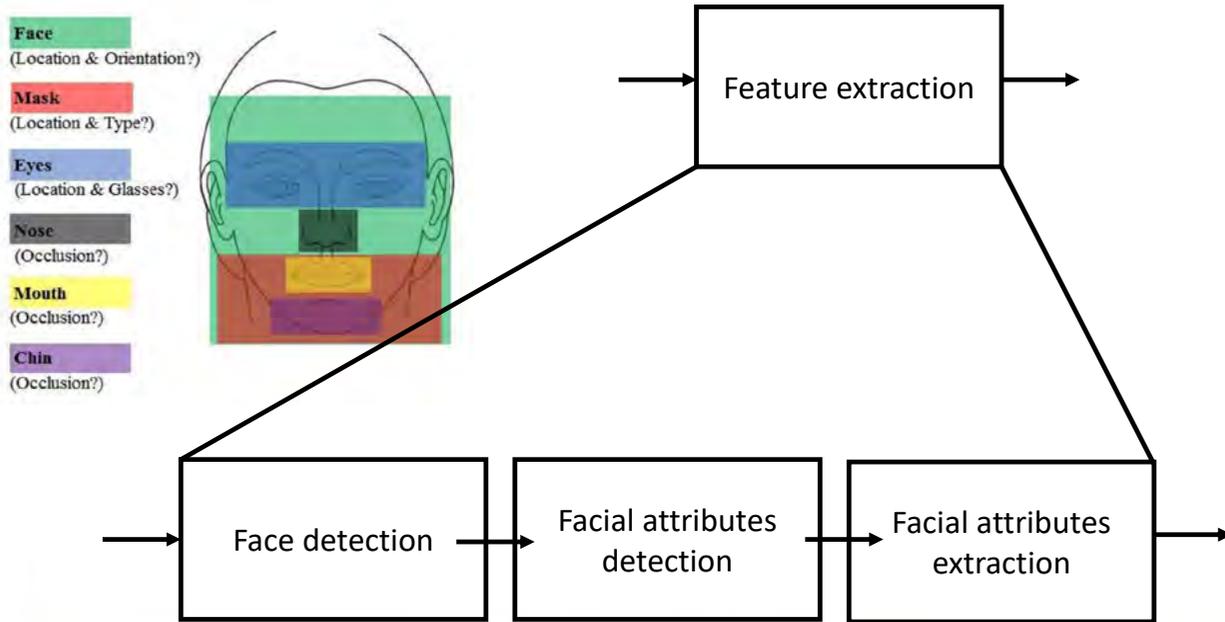

Computer vision - techniques

- 0. step: Pre-processing of digital images
- 1. step: Feature extraction
- 2. step: Comparison with dataset
- 3. step: set output

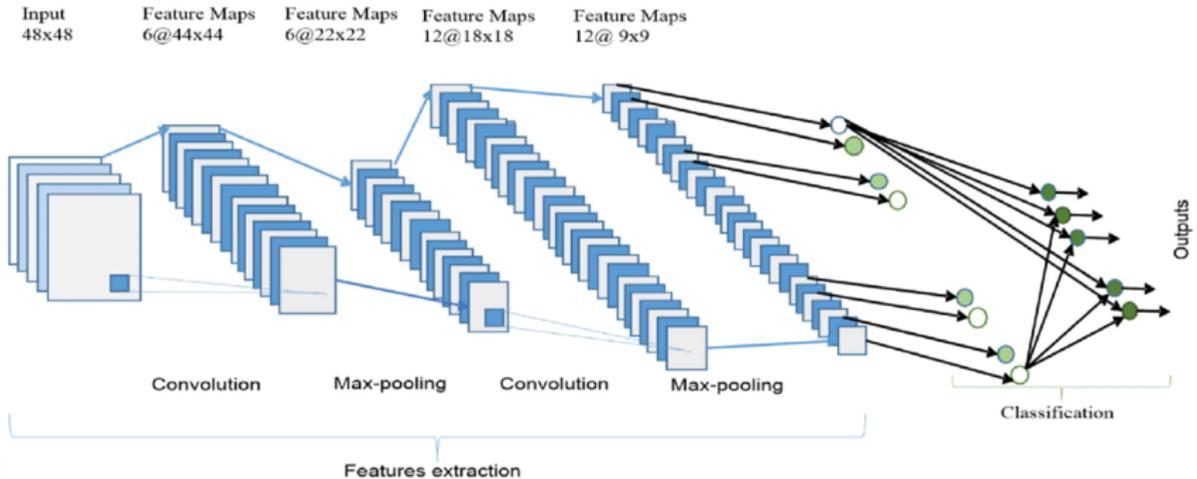

Computer vision - techniques

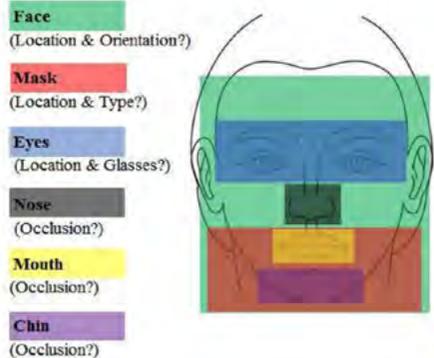

Learning techniques

- Neural Networks (**Convolutional** Neural Network)

Dataset of faces and faces with masks

- MaFA: A Dataset of Masked Faces
 - Facial attributes
 - Around 35k digital images of masks
 - Around 400k of all digital images in dataset
 - **Dataset with representative facial image with different attributes**

Dataset of faces and faces with masks

- WIDER FACE: A dataset of faces
 - 32,203 images labelled with 393,703 faces with a high degree of variability in scale
 - **State of the art**

Hardware

- NVIDIA Jetson (JETSON AGX XAVIER DK)
 - System on Modul (SoM) including CPU, GPU, memory, power management, ...
 - **HDMI**
 - **USB**
- Monitor (HDMI)
- Steel stand

Results

- Evaluation with custom built dataset
 - 1.5k images of faces
 - 500 images of faces with face masks
 - Around 2k images with other content (without faces)
- Results: **82.33 %**

Conclusion

- The system has successfully performed given task
- Possible future improvements:
 - More systems at each building entrance
 - Better user interface/experience
 - Adding a system for Body temperature measuring
 - Fine-tuning pretrained model
 - Adjusting neural network parameters for higher density of detection per minute

Thank you for your attention

Project type

- Dispenser
- Placer
- Load pick and place data from file

Pads file (Gerber RS-274X format) [Required]

File path: C:\Users\P&P\Desktop\sysiec poprawiony\Motherboard_ECUcore-9; ...

Loading status: Loaded

Note: This file is required for interactive background visualisation. It is mandatory for all types of projects.

Contour file (Gerber RS-274X format) [Optional]

File path: C:\Users\P&P\Desktop\sysiec poprawiony\Motherboard_ECUcore 9; ...

Loading status: Loaded

Note: This file is required for board contour visualisation. Board contour is not interactive. It is fully optional.

Pick and place file

File path: C:\Users\P&P\Desktop\sysiec poprawiony\Pick Place for Motherboa ...

Loading status: Loaded

Note: This file contains data required to place components. Typical file extensions: ".net", ".csv", ".mex", ".msh"

Fiducial point selection

..... FIDUCIALS

Fiducials are used by the machine to evaluate precise position of the board on the print area.
 To add a fiducial to the list mark it on CAD DATA view (use Ctrl + left mouse button for selection). Fiducial will be added automatically.

Selected fiducials:

Id	Type	Virtual position	Pattern file path
1	Global	[X=2500, Y=247500]	[local]
2	Global	[X=162500, Y=2500]	C:\Users\P&P\Desktop\screeny do n
3	Local	[X=9000, Y=234000]	[no pattern]
4	Local	[X=148000, Y=129000]	[no pattern]
5	Local	[X=9000, Y=114000]	[no pattern]
6	Local	[X=148000, Y=9000]	[no pattern]

Programiran je ANDROID naprav z GUI-O aplikacijo

Matjaž Skubic

www.gui-o.com

Imagine GUI-O. create

Programiranje **ANDROID** naprav

- › Večkrat so naprave brez GUI vmesnika, ker so GUI predragi
- › Naprave z GUI vmesnikom – so kompleksne in drage
- › Potrebni razvojniki za Android platformo
- › Za vsak tip naprave druga uporabniška aplikacija
- › Potrebno znanje objektno orientiranih jezikov
- › Pri GUI-O to znanje ni več potrebno

www.gui-o.com

making GUI-O create

Prednosti GUI-O

- GUI-O ni orodje za razvoj uporabniškega vmesnika – to je univerzalen, izdelan, grafični vmesnik.
- Začetek uporabe ne zahteva instalacije orodij in usposabljanje
 - Za začetek je dovolj en sam kratek string in vmesnik deluje: |TG UID:tg1 X:50 Y:50
- Od enostavnega do zahtevnega vmesnika uporabnik dodaja elemente in parametre
- Ločevanje med vmesnikom za podporo razvoja in uporabniškim vmesnikom ni več potrebno.

www.gui-o.com

Kaj prinaša GUI-O ?

- Razvojniki na strani naprave je tudi razvojniki Android aplikacije
- Spremembe se enostavno izvajajo iz projekta v projekt
- Ni potrebno zaposlovati Android programerjev
- Univerzalnost, enostavnost
- Bistveno manjši stroški razvoja

www.gui-o.com

Primer uporabe GUI-O

- Za vse sisteme, ki jih lahko povežemo z Android napravami
 - RS232
 - UART-USB
 - UART-Bluetooth
 - UART-Bluetooth BLE
 - UART-WiFi

www.gui-o.com

Primer uporabe GUI-O

- up: Microchip ARM, STM ,PIC, AVR, 8051
- STM
- Arduino
- PLC
- Raspberry PI
- Orange PI
- Embeded PC
- PC Win, Linux, ...

GUI-O je veliko več kot touch screen na napravi!

www.gui-o.com

Razvojna okolja

- C++
- Arduino
- C#
- Delphy
- STM
- Pyton
- Bascom
- ...

magnum GUI-O create

The interface features a central display showing the following settings:

- GAIN: 5
- BAL: 0
- TRE: 6
- BASS: 8

Below the display is the URL <http://gui-o.com>.

The mixer includes several control sections:

- Input Channels:** MIC1, MIC2, LIN1, LIN2, LIN3, LIN4. Each channel has a vertical level meter and a color-coded gain knob (red for MIC, yellow for LIN).
- Master Section:** MASTER, with a vertical level meter and a color-coded gain knob (red).
- EQ Section:** TRE (Treble), MID (Midrange), and BASS (Bass), each with a color-coded knob (red, yellow, and blue respectively).
- Balance Section:** BALANCE, with a color-coded knob (blue).
- Gain Section:** GAIN, with a color-coded knob (red).
- Level Indicators:** A vertical stack of six LEDs on the right side, labeled OVER, 0dB, -6dB, -18dB, -30dB, -48dB, and -60dB. The OVER LED is currently lit red.

GUI-O application for Android devices

Matjaž Skubic

www.gui-o.com

Disadvantages of graphical user interface (GUI) programming

- GUI implementation is costly and time consuming
- Requires thoughtful selection of hardware (graphical display, touchscreen, etc.)
- Object-oriented programming requires relatively high expertise and knowledge

About GUI-O application

- GUI-O application is a fully developed graphical user interface design tool
- Simple ASCII protocol enables quick start: e.g., send **|TG UID:tg1 X:50 Y:50\r\n** to create a functional toggle button
- Numerous highly customizable widgets are available (toggle, slider, chart, image and video viewer, etc.)
- No additional tools or libraries required

www.gui-o.com

Advantages of GUI-O application

- Language agnostic – supports development in any programming language using a simple ASCII protocol
- Easy integration into any project, at any stage
- No Android programming knowledge is required
- Universal and simple GUI development tool
- Reduces the development costs

www.gui-o.com

How to use?

- Any microcontroller (or other) device that support USB, Bluetooth, Bluetooth LE or internet connectivity. Devices without built-in support can use:
 - RS232
 - UART-USB
 - UART-Bluetooth
 - UART-Bluetooth BLE
 - UART-WiFi

Supported devices

- up: Microchip ARM, STM ,PIC, AVR, 8051
- STM
- Arduino
- PLC
- Raspberry PI
- Orange PI
- Embeded PC
- PC Win, Linux, .

.O offers much more than just touchscreen and display functionality!

**International Conference for
ICT, Electronics & Mechatronics IKTEM 2021**

**Comprehensive EMS and ODM solutions:
FROM CONCEPTUAL DESIGN TO PRODUCTION**

Presented by:
Matjaž Hribar
EMA d.o.o.

Who we are

**Industrial marking,
coding and
engineering** market
leader in Slovenia

www.ema.si

**EMS, ODM
and DFM** provider

www.emsplace.eu

Developer and
manufacturer of
**telematic products &
solutions** (BlueTraker)

www.bluetraker.com

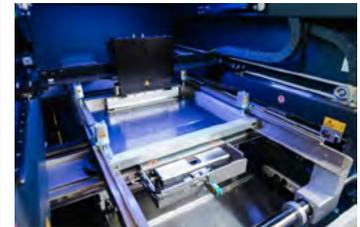

What is EMSplace and the "why" behind its launch

- **EMSplace** consists of both **EMS** (Electronic Manufacturing Services) and **ODM** (Original Design Manufacturing) solutions.
- Combining **modern automation** equipment and **highly skilled employees**, thus achieving the **best combination of quality, cost and speed**.
- **Three main reasons for launching EMSplace:**
 1. The lack of EMS and ODM solutions that would shorten the time of manufacturing process;
 2. Unsatisfactory quality of electronic modules assembling;
 3. Non-agile customer support.

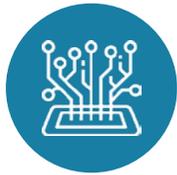

EMS production segments we cover

Electronic circuits for:

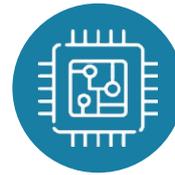

- energy information systems;
- bee-keeping scales;
- pigeon tracking devices;
- remote monitoring;
- e-bikes;
- LED modules and power supply for LEDs;
- electricly powered motors;
- mobile terminals;
- consumer electronics; etc.

Our competitive advantages

Flexibility of assembling

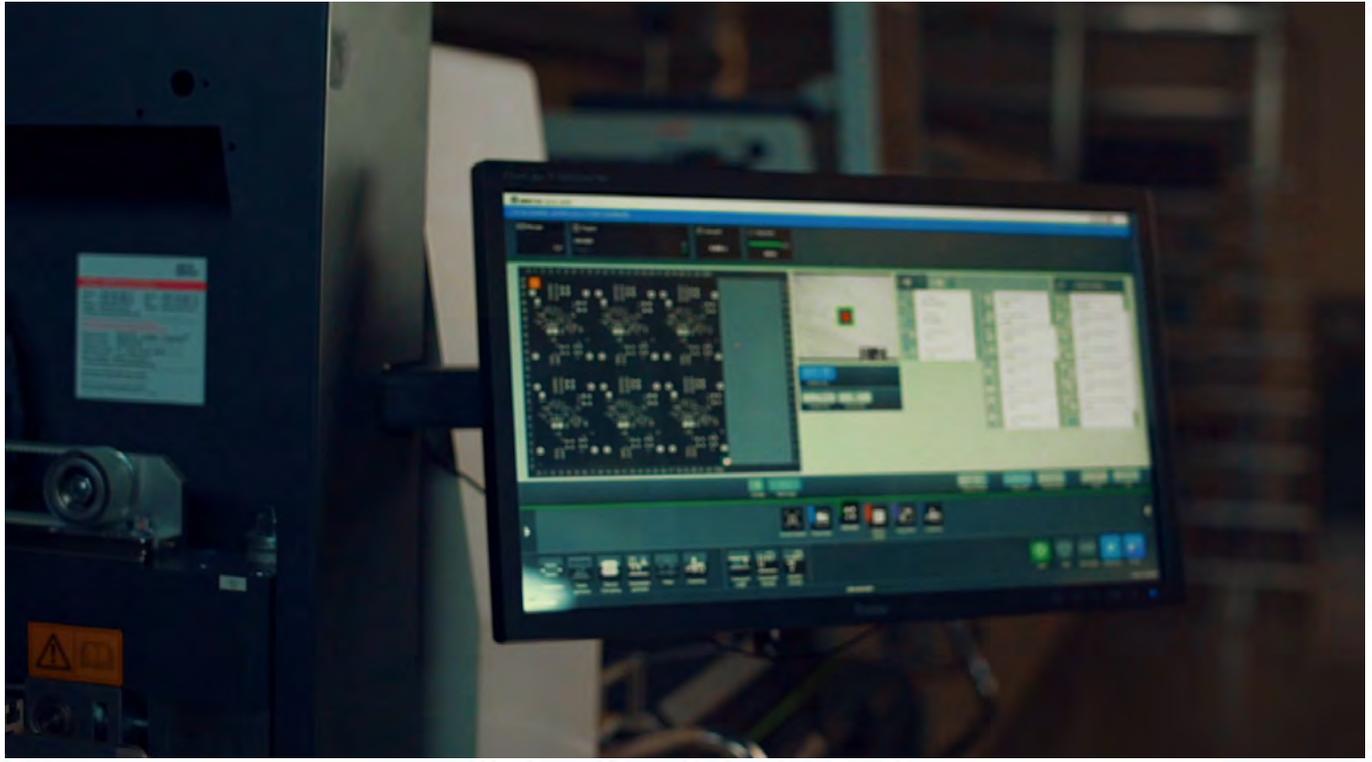

Wide array of full EMS services

Monitoring mechanical firmness of electronic components

In house development of electronic compounds, test devices, etc.

International Conference for ICT, Electronics & Mechatronics IKTEM 2021

Dinamične merilne lastnosti osciloskopov

Mirko Ivančič, Amiteh d.o.o.

Odziv merilne naprave na hipno spremembo vhodne veličine

Tipična karakteristika **pri hipni spremembi** vhodne veličine:

Prehodna funkcija:

$$h(t) = \frac{y(t)}{x(t)}$$

T_a – odzivni čas

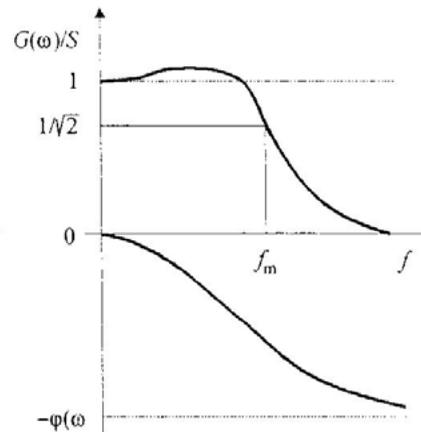

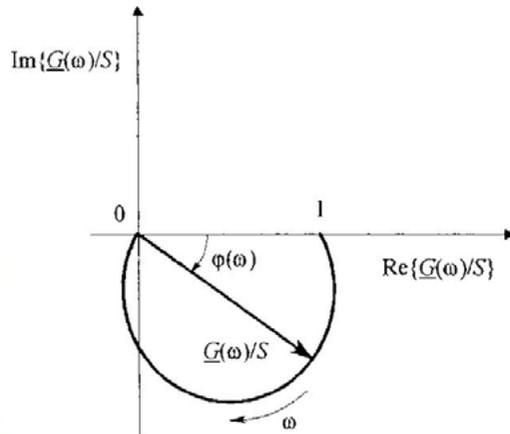

T_r – dvižnini čas

y_m – preihanje

Odzivanje merilne naprave na **sinusno obliko**

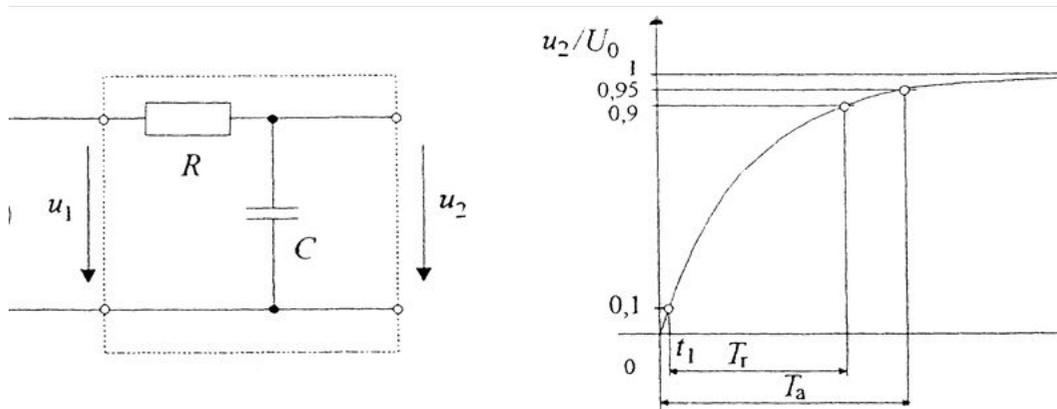

Amplituda in fazni kot sta odvisna od frekvence

Frekvenčna karakteristika: $\underline{G}(\omega) = \frac{Y(\omega)}{X(\omega)} = |\underline{G}(\omega)| e^{j\varphi(\omega)} = G(\omega) e^{j\varphi(\omega)}$

$\underline{S}(\omega)$ – kompleksna občutljivost

Povezava odzivnega časa in mejne frekvence

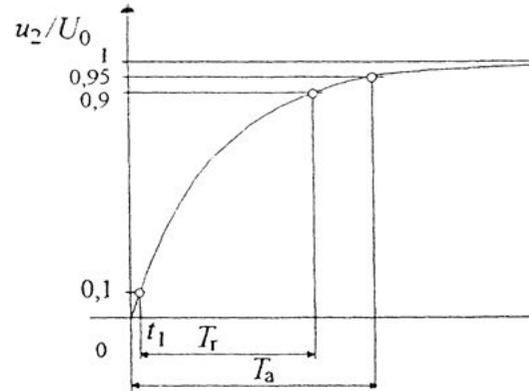

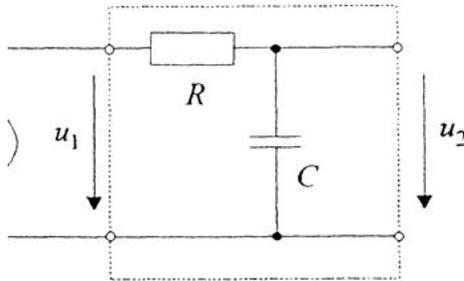

odziv na stopnico: $u_2 = U_0(1 - e^{-t/\tau})$ $\tau = RC$

narast signala do 95%: $0,95U_0 = U_0(1 - e^{-T_a/\tau}) \Rightarrow T_a = \tau \ln 20 \approx 3\tau$

Povezava odzivnega časa in mejne frekvence

Med odzivnim časom ($M = \pm 5\%$) in zgornjo frekvenčno mejo ($1/\sqrt{2}$) obstaja povezava:

$$T_a \approx \frac{1}{2f_m}$$

Povezava mejne frekvence in dvižnega časa

spodnji prag: $0,1U_0 = U_0(1 - e^{-t_1/\tau})$

zgornji prag: $0,9U_0 = U_0(1 - e^{-(t_1+T_r)/\tau})$

povezava **dvižnega časa** in časovne konstante: $T_r = \tau \ln 9 = 2,2 \tau$

povezava mejne frekvence in dvižnega časa: $f_m = \frac{1}{2\pi(T_r/\ln 9)} = \frac{0,35}{T_r}$

Prevajalna funkcija sistema

Pogosto prevajalno funkcijo podajamo s frekvenco v razmerju proti mejni frekvenci:

$$\frac{\underline{U}_2}{\underline{U}_1} = \frac{1}{1 + jf/f_m} \Rightarrow \frac{\hat{u}_2}{\hat{u}_1} = \frac{1}{\sqrt{1 + (f/f_m)^2}}$$

Če sta v verigo (**kaskado**) zaporedno vezana dva člena, se frekvenčna odziva se množita:

$$\frac{1}{\sqrt{1 + (f/f_{m1})^2}} \cdot \frac{1}{\sqrt{1 + (f/f_{m2})^2}} = \frac{1}{\sqrt{1 + (f/f_{ms})^2}}$$

Prevajalna funkcija sistema

Pri vzbujanju z $f = f_{ms}$ velja :

$$\left[1 + (f_{ms}/f_{m1})^2\right] \left[1 + (f_{ms}/f_{m2})^2\right] = 2$$

Po malo preoblikovanja in upoštevanju

$$\text{if } f_{ms}/f_{m1} < 1 \quad f_{ms}/f_{m2} < 1$$

dobimo znano povezavo

$$\frac{1}{f_{ms}^2} \approx \frac{1}{f_{m1}^2} + \frac{1}{f_{m2}^2}$$

izraženo z dvižnim časom pa:

$$T_{rs}^2 = T_{r1}^2 + T_{r2}^2$$

Primeri izračunov skupnega dvižnega časa

osciloskop	dviži čas	sonda		sonda		sonda		sonda		sonda	
BW [MHz]	tr [ns]	10 MHz		100 MHz		350 MHz		500 MHz		1 GHz	
		skupni dvižni čas /pasovna širina									
		[ns]	[MHz]	[ns]	[MHz]	[ns]	[MHz]	[ns]	[MHz]	[ns]	[MHz]
10	35,00	49,5	7,1	35,17	10,0	35,01	10,0	35,01	10,0	35,00	10,0
100	3,50	35,2	10,0	4,95	70,7	3,64	96,2	3,57	98,1	3,52	99,5
350	1,00	35,0	10,0	3,64	96,2	1,41	247,5	1,22	286,7	1,06	330,4
500	0,70	35,0	10,0	3,57	98,1	1,22	286,7	0,99	353,6	0,78	447,2
1000	0,35	35,0	10,0	3,52	99,5	1,06	330,4	0,78	447,2	0,49	707,1

Hvala za pozornost!

LINUX VIRTUALIZATION

Presentation for the international conference IKTEM

*Žiga Lausegger, prof. fizike in tehnike
Pistam d.o.o.
ziga@pistam.com*

Keywords: Linux, hypervisor, virtual machine, client, remote, local

Ljubljana, June 2021

1 ACRONYMS

- OS** operating system ∞
- VM** virtual machine ∞

- SSH** secure shell protocol ∞
- IP** internet protocol address ∞
- RSA** Rivest–Shamir–Adleman encryption ∞
- GUI** graphical user interface ∞
- CLI** command line interface ∞
- CPU** central processing unit ∞

Slide 2

2 INSTALLING DEBIAN 11 ON THE SERVER

Debian installation is not part of this presentation, but here are some tips.

- (OS) Debian 11 (*stable*) will release around september 2021.
- Currently OS is in *testing* phase but it's installation medium can be obtained online. ∞
- We download it and install it (*no desktop*) on machine i.e. `ziga--hypervisor` .
- During installation we create two users:
 - `ziga` (*normal user*),
 - `root` (*privileged user*).
- We also set up two SSD:
 - 1st for OS
 - 2nd for storing VM.

When installation is finished we reboot the `ziga--hypervisor` .

Slide 3

3 USER

- When installation finishes we locally login on `ziga--hypervisor` with user `root`.
- User `ziga` will manage (VM) and needs elevated privileges!

```
root@ziga--hypervisor:~# apt install sudo
root@ziga--hypervisor:~# echo "ziga ALL=(ALL:ALL) NOPASSWD:ALL" >> /etc/sudoers
root@ziga--hypervisor:~# exit
```

- We log out and continue as user `ziga`.

Slide 4

4 SSH -- INSTALLATION & CONFIGURATION

- We need a capable text editor.

```
ziga@ziga--hypervisor:~$ sudo apt install neovim
```

- SSH *client* is already installed.

- We install SSH *server* and edit it's configuration file.

```
ziga@ziga--hypervisor:~$ sudo apt install openssh-server
ziga@ziga--hypervisor:~$ sudo nvim /etc/ssh/sshd_config
```

Uncomment two lines:

```
Port 22
PermitRootLogin prohibit-password
```

- Restart SSH *daemon*:

```
ziga@ziga--hypervisor:~$ sudo systemctl restart sshd.service
```

Slide 5

5 SSH -- PREREQUISITES

- Check the `ziga--hypervisor` 's IP.

```
ziga@ziga--hypervisor:~$ ip addr
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever
    inet6 ::1/128 scope host
        valid_lft forever preferred_lft forever
2: eno1: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc pfifo_fast state UP group default qlen 1000
    link/ether b4:2e:99:c6:b4:1e brd ff:ff:ff:ff:ff:ff
    altname enp0s31f6
    inet 192.168.64.104/24 brd 192.168.64.255 scope global dynamic eno1
        valid_lft 83082sec preferred_lft 83082sec
    inet6 fe80::b62e:99ff:fec6:b41e/64 scope link
        valid_lft forever preferred_lft forever
```

Slide 6

6 SSH -- PASSWORD AUTHENTICATION

- Test the SSH connection from our Linux *client* `ziga--workstation` using the *password authentication*.

```
ziga@ziga--workstation:~$ ssh ziga@192.168.64.104

The authenticity of host '192.168.64.104 (192.168.64.104)' can't be establish
ECDSA key fingerprint is SHA256:fyZFufxuFceT2xHE++Ftv5HQ18gw1vt2hLRjpS2jZnk.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '192.168.64.104' (ECDSA) to the list of known hosts.
ziga@192.168.64.104's password: *****

ziga@ziga--hypervisor:~$
```

- However *password authentication* is insufficient for virtualization!
- And we set it not to work for user `root`.

```
ziga@ziga--workstation:~$ ssh root@192.168.64.104
root@192.168.64.104's password: *****
Permission denied, please try again.
```

Slide 7

7 SSH -- KEY-PAIR AUTHENTICATION

- SSH *key-pair authentication* enables us not to write passwords when remotely connecting over SSH.
- SSH *key-pair* is *client* based i.e. `ziga--workstation` has one *public key* which it deploys on multiple *servers*! He also has a *private key* that he keeps for himself and uses it to authenticate with deployed *public keys*!

7.1 CREATE & DEPLOY KEY-PAIR

- We first create an RSA *key-pair* on *client* `ziga--workstation`.

```
ziga@ziga--workstation:~$ ssh-keygen -t rsa
```

- Copy *public key* `~/.ssh/id_rsa.pub` to *server* `ziga--hypervisor` and copy it's content to `~/.ssh/authorized_keys`.

```
ziga@ziga--workstation:~$ scp ~/.ssh/id_rsa.pub ziga@192.168.64.104:/home/ziga
ziga@ziga--workstation:~$ ssh ziga@192.168.64.104
ziga@ziga--hypervisor:~$ mkdir ~/.ssh && touch ~/.ssh/authorized_keys
ziga@ziga--hypervisor:~$ cat id_rsa.pub >> ~/.ssh/authorized_keys && rm id_rsa.pub
ziga@ziga--hypervisor:~$ chmod -R 700 ~/.ssh
ziga@ziga--hypervisor:~$ chmod -R 600 ~/.ssh/authorized_keys
```

Slide 8

7.2 TEST KEY-PAIR AUTHENTICATION

- Now we can connect to the server `ziga--hypervisor` from client `ziga--workstation` without password, using only *key-pair authentication*!

```
ziga@ziga--workstation:~$ ssh ziga@192.168.64.104
ziga@ziga--hypervisor:~$
```

- This also works for user `root`.

```
ziga@ziga--workstation:~$ ssh root@192.168.64.104
root@ziga--hypervisor:~#
```

Slide 9

8 HYPERVISOR SETUP

- *Hypervisor* is a *server* program that can host VM.

8.1 INSTALLING THE PACKAGES

- We connect to the *server* `ziga--hypervisor` and install packages:

```
ziga@ziga--hypervisor:~$ sudo apt install \  
qemu \  
virt-manager \  
virt-viewer \  
xserver-xorg-core \  
xserver-xorg-video-intel \  
xinit \  
libvirt-daemon
```

- We start the *daemon* needed by GUI program `virt-manager`.

```
ziga@ziga--hypervisor:~$ sudo systemctl enable libvirtd.service  
ziga@ziga--hypervisor:~$ sudo systemctl start libvirtd.service
```

Slide 10

8.2 ADDING USER IN PROPER GROUPS

- If server's user `ziga` wants to start `virt-manager` without password he needs to be in group `libvirt`.

```
ziga@ziga--hypervisor:~$ sudo usermod -a -G libvirt ziga
```

- We disconnect & reconnect to the server `ziga--hypervisor` in order for group to apply.

Slide 11

8.3 GUI TEST -- WINDOWS

- Linux *clients* with X graphical server & SSH *client* installed can now execute command to open *server*'s `virt-manager` and transfer it's GUI over network, figure 1.

```
ziga@ziga--workstation:~$ ssh -Y ziga@192.168.4.104 virt-manager
```

Figure 1: GUI of `virt-manager` transferred from *server* `ziga--hypervisor` to *client* `ziga--workstation` over network.

Slide 12

8.4 GUI TEST -- WINDOWS

- Windows *clients* natively don't have X graphical server installed, but we can install it with package `vcxsrv`. ∞
- We start program `xlaunch` from Windows start menu. We then select *multiple windows* and click `[Next]`. Then we select *start no client* and click `[Next]` twice and then `[Finish]`. X server will start running on our Windows *client*!
- Install and open program `Putty` ∞.
 - Navigate to the tab *SSH and X11*. Put check mark in field *Enable X11 forwarding*.
 - Navigate to the tab *Session*, set field *Host name* to `192.168.64.104` and click `[Open]`.
 - We insert a password and Windows *client* will login to the server.
- We can now run application `virt-manager` in order to see it's GUI being transfered over network to our Windows *client*. It will look the same as on the Linux *client*, figure 1.

Slide 13

8.5 CREATING HYPERVISOR'S BRIDGE NETWORK

- Linux network interfaces i.e. `eno1` can only be used by one device.
- First VM to use `eno1` gets access to network. Others dont!
- We need a *bridge* that will split acces to the `eno1` between multiple VM and therefore connect:
 - VM between each other,
 - VM to the *server* `ziga--hypervisor` ,
 - VM to the machines on physical network of the *server*,
 - VM to the internet.

Slide 14

8.5.1 INSTALLING NETWORK MANAGER

- We will use *network manager* named `network-manager` and it's strongest CLI frontend `nmcli`.

```
ziga@ziga--hypervisor:~$ sudo apt install network-manager
```

- Note that initially `network-manager` can't manage network interface `eno1`.

```
ziga@ziga--hypervisor:~$ nmcli device
DEVICE  TYPE      STATE      CONNECTION
eno1    ethernet  unmanaged  --
lo      loopback  unmanaged  --
```

- Even explicitly commanding `network-manager` to manage `eno1` fails.

```
ziga@ziga--hypervisor:~$ sudo nmcli device set eno1 managed yes
ziga@ziga--hypervisor:~$ nmcli device
DEVICE  TYPE      STATE      CONNECTION
eno1    ethernet  unmanaged  --
lo      loopback  unmanaged  --
```

- This is because `eno1` is already managed by Debian's default *network manager*.

Slide 15

- Debian's default *network manager* uses a configuration file `/etc/network/interfaces`. We open it and comment out lines containing `eno1`, listing 1.

```
1 source /etc/network/interfaces.d/*
2
3 auto lo
4 iface lo inet loopback
5
6 #allow-hotplug eno1
7 #iface eno1 inet dhcp
```

Listing 1: `/etc/network/interfaces`

- We can now restart the `network-manager`'s *daemon* and it will start managing the `eno1`.

```
ziga@ziga--hypervisor:~$ sudo systemctl restart NetworkManager.service
ziga@ziga--hypervisor:~$ nmcli device
DEVICE  TYPE      STATE          CONNECTION
eno1    ethernet  connected (externally)  eno1
lo      loopback  unmanaged
```

Slide 16

8.5.2 CREATING A BRIDGE

- We add a *connection* `virtual_bridge_connection` of type *bridge* to the device `virtual_bridge`. This device does not yet exist and is created alongside the *connection*.

```
ziga@ziga--hypervisor:~$ sudo nmcli connection \  
  add ifname virtual_bridge \  
  type bridge \  
  con-name virtual_bridge_connection
```

- We add another *connection* `virtual_bridge_slavery` to the interface `eno1`. This *connection* enslaves interface `eno1` to its master i.e. `virtual_bridge`.

```
ziga@ziga--hypervisor:~$ sudo nmcli connection \  
  add ifname eno1 \  
  master virtual_bridge \  
  type bridge-slave \  
  con-name virtual_bridge_slavery
```

Slide 17

- Now we have to shut down the connection `virtual_bridge_slavery` and start the connection `virtual_bridge_connection` that will enslave interface `eno1`.
- To do this we will use a `bash` script, listing 2, that establishes a static IP for `virtual_bridge_connection`.

```
1 #!/bin/bash
2 nmcli connection down virtual_bridge_slavery
3 nmcli connection modify virtual_bridge_connection ipv4.addresses 192.168.64.104/24
4 nmcli connection modify virtual_bridge_connection ipv4.gateway 192.168.64.1
5 nmcli connection modify virtual_bridge_connection ipv4.dns 8.8.8.8
6 nmcli connection modify virtual_bridge_connection ipv4.method manual
7 nmcli connection up virtual_bridge_connection
```

Listing 2: `~/restart_interface.bash`

- We make script executable and execute it as `root` user.

```
ziga@ziga--hypervisor:~$ sudo chmod +x ./restart_interface.bash
ziga@ziga--hypervisor:~$ su
Password: *****
root@ziga--hypervisor:~# bash ./restart_interface.bash
```

- We will loose the connection with the *server* but when *server* is back online we can again connect to it using SSH.

Slide 18

- We can now confirm a working status of the `bridge` `virtual_bridge` .

```
ziga@ziga--hypervisor:~$ nmcli device
DEVICE          TYPE      STATE      CONNECTION
virtual_bridge  bridge   connected  virtual_bridge_connection
eno1            ethernet connected  virtual_bridge_slavery
lo              loopback unmanaged  --
```

- VM will not access `eno1` directly anymore, but indirectly through it's master `virtual_bridge` . This will enable all VM to simultaneously access the network as if they were separate physical machines!

9 VIRTUAL DISK IMAGE CREATION

- We create an empty virtual disk image in `.qcow2` format.

```
ziga@ziga--hypervisor:~$ mkdir ~/vm
ziga@ziga--hypervisor:~$ qemu-img create -f qcow2 ~/vm/disk_image.qcow2 40G
```

- We download some installation image in `.iso` format.

```
ziga@ziga--hypervisor:~$ mkdir ~/iso
ziga@ziga--hypervisor:~$ wget -P ~/iso https://example_page/example_operating_system.iso
```

Slide 19

10 VM MANAGEMENT USING GUI

- Let's demonstrate the VM management through `virt-manager`'s GUI (*hosted over network*)...

Slide 20

11 TAKEAWAYS

- There is no more need to invest money in vmware ...
- Debian 11 runs on ARM CPU... ∞
- ARM CPU currently include up to 128 cores... ∞
- ARM servers already exist in a multi CPU configurations... ∞
- ARM servers are adopted by large manufactureres like Gigabyte... ∞

IoT and Digital Twin Production Guiding Concept

Jernej Protner, Niko Herakovič

University of Ljubljana, Faculty of Mechanical Engineering,
Laboratory LASIM

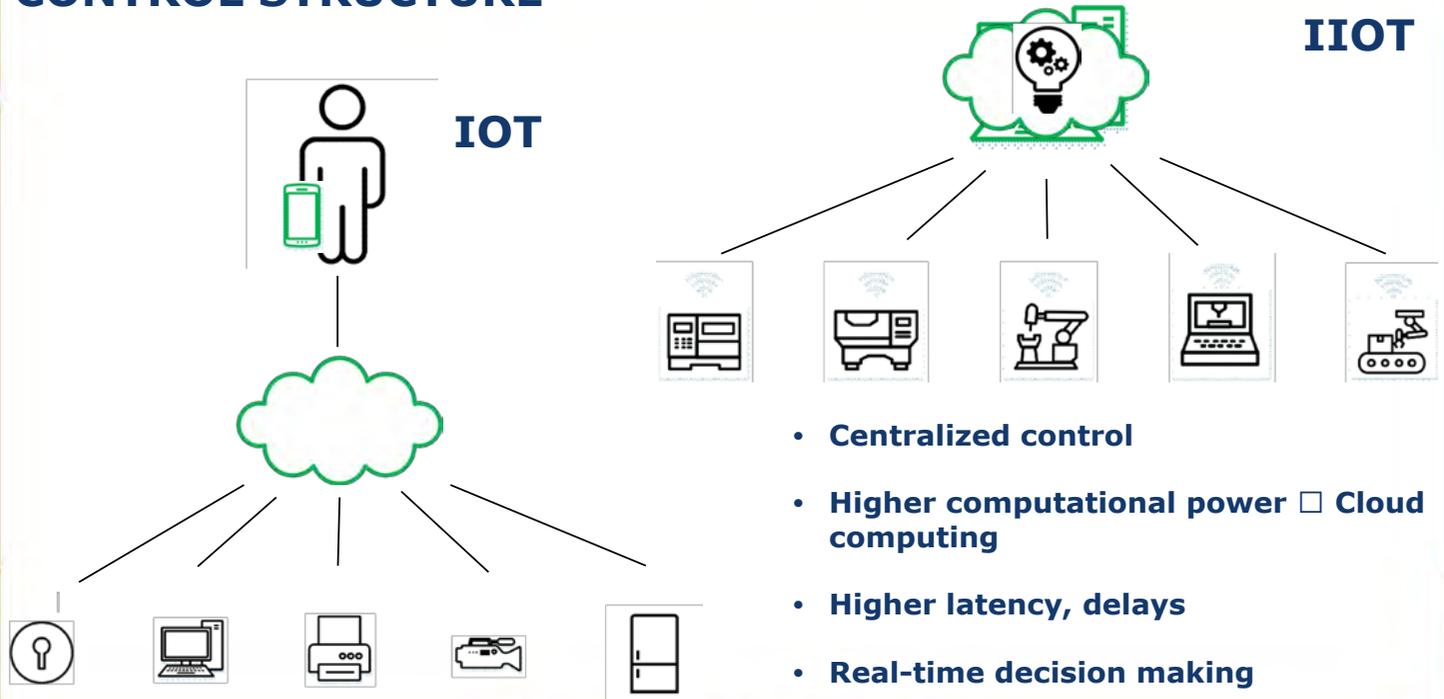

University of Ljubljana
Faculty of Mechanical Engineering

LASIM
LABORATORY FOR MANAGING ASSEMBLY AND PRESENTING

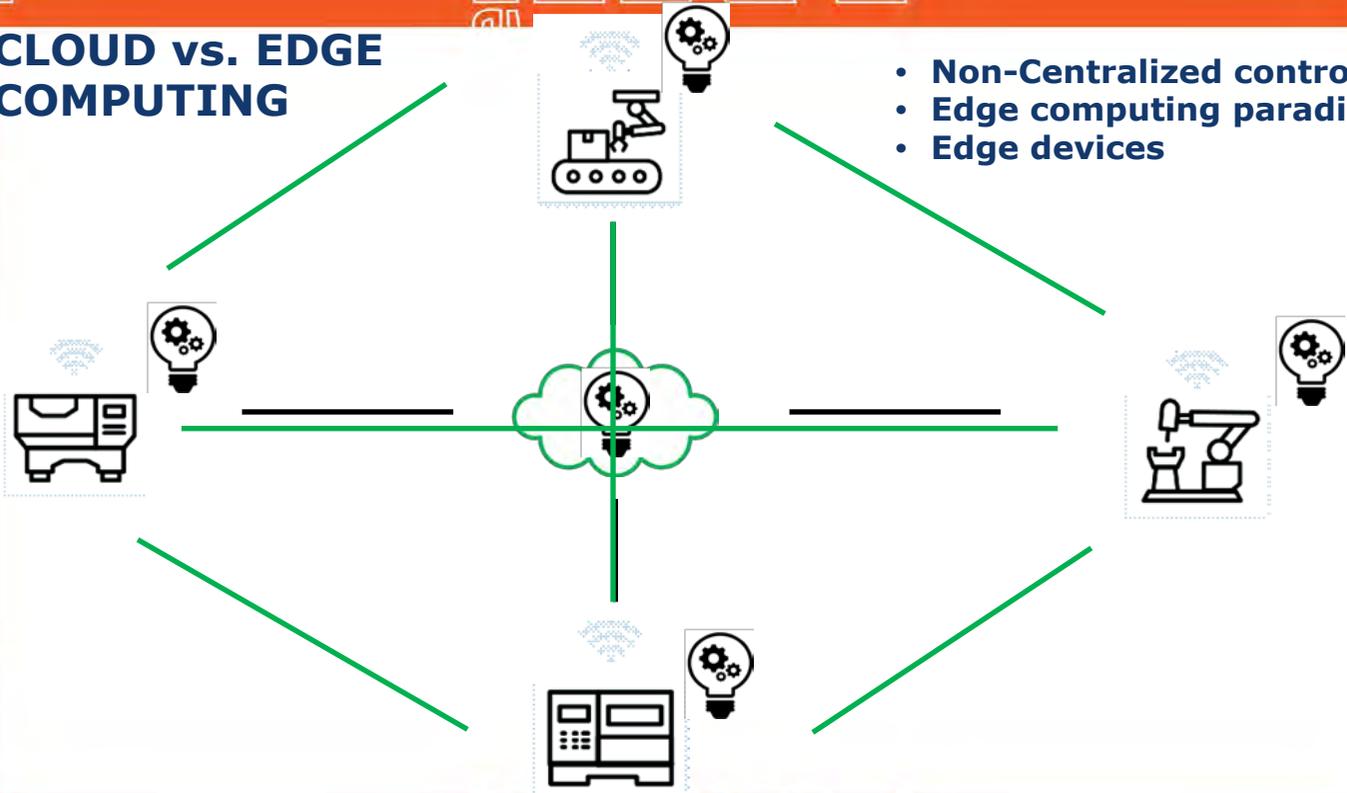

CONTROL STRUCTURE

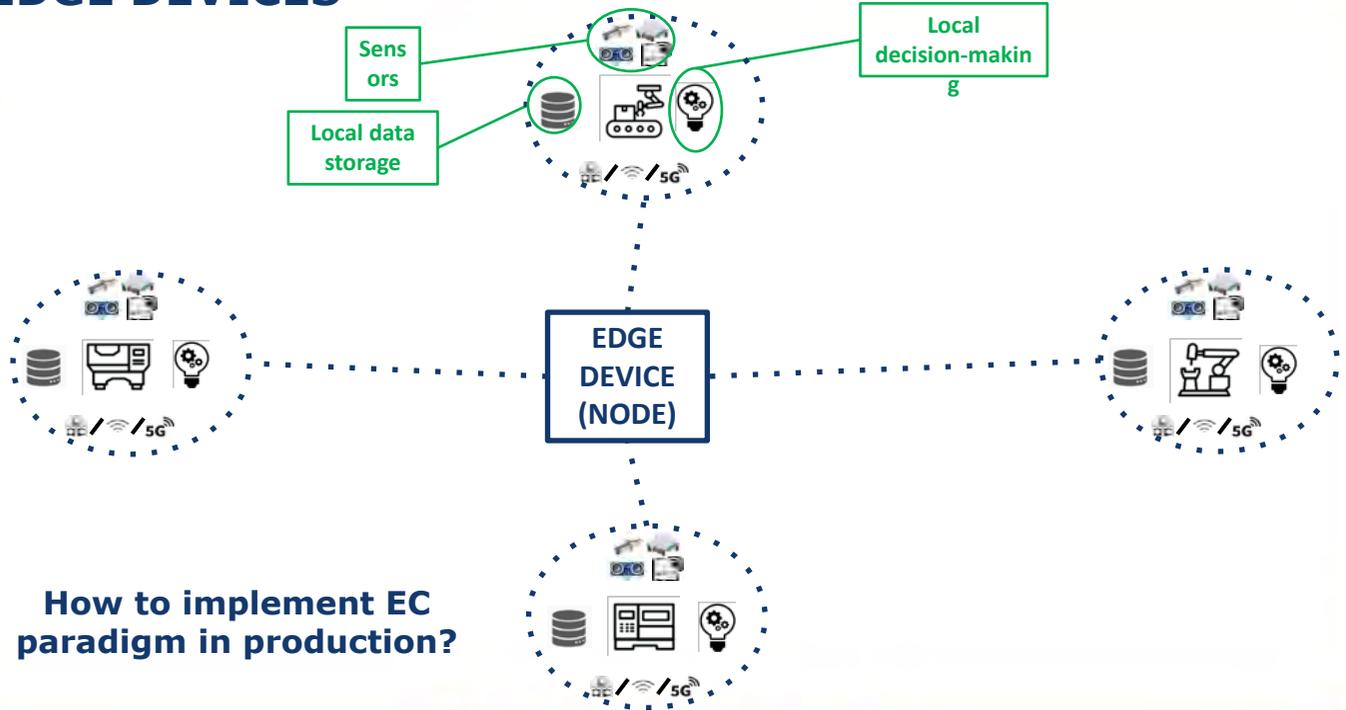

- **Centralized control**
- **Higher computational power** □ **Cloud computing**
- **Higher latency, delays**
- **Real-time decision making**

CLOUD vs. EDGE COMPUTING

- **Non-Centralized control**
- **Edge computing paradigm**
- **Edge devices**

EDGE DEVICES

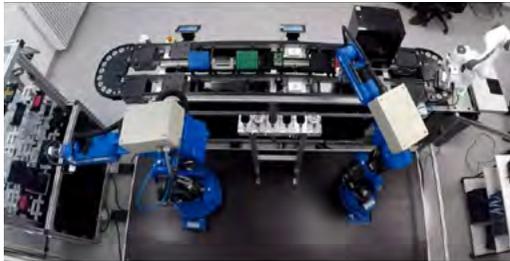

DIGITAL TWIN

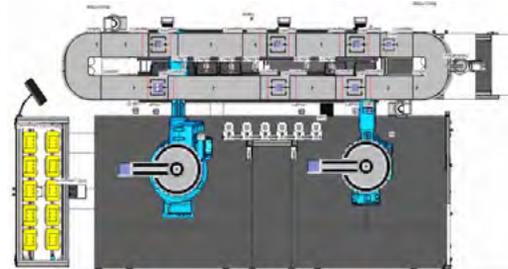

Digital model: A digital mapping of a physical system and its processes into a virtual environment.

Digital twin: Bi-directional connection of the physical system and the digital model by a feedback control loop.

PHYSICAL SYSTEM

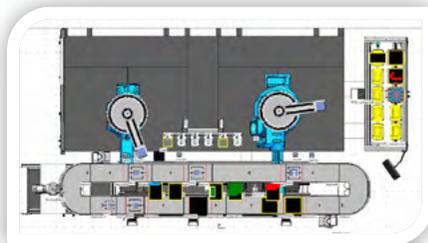

DIGITAL MODEL VIRTUAL ENVIRONMENT

- Simulation (DES)
- What-if scenarios
- Optimization

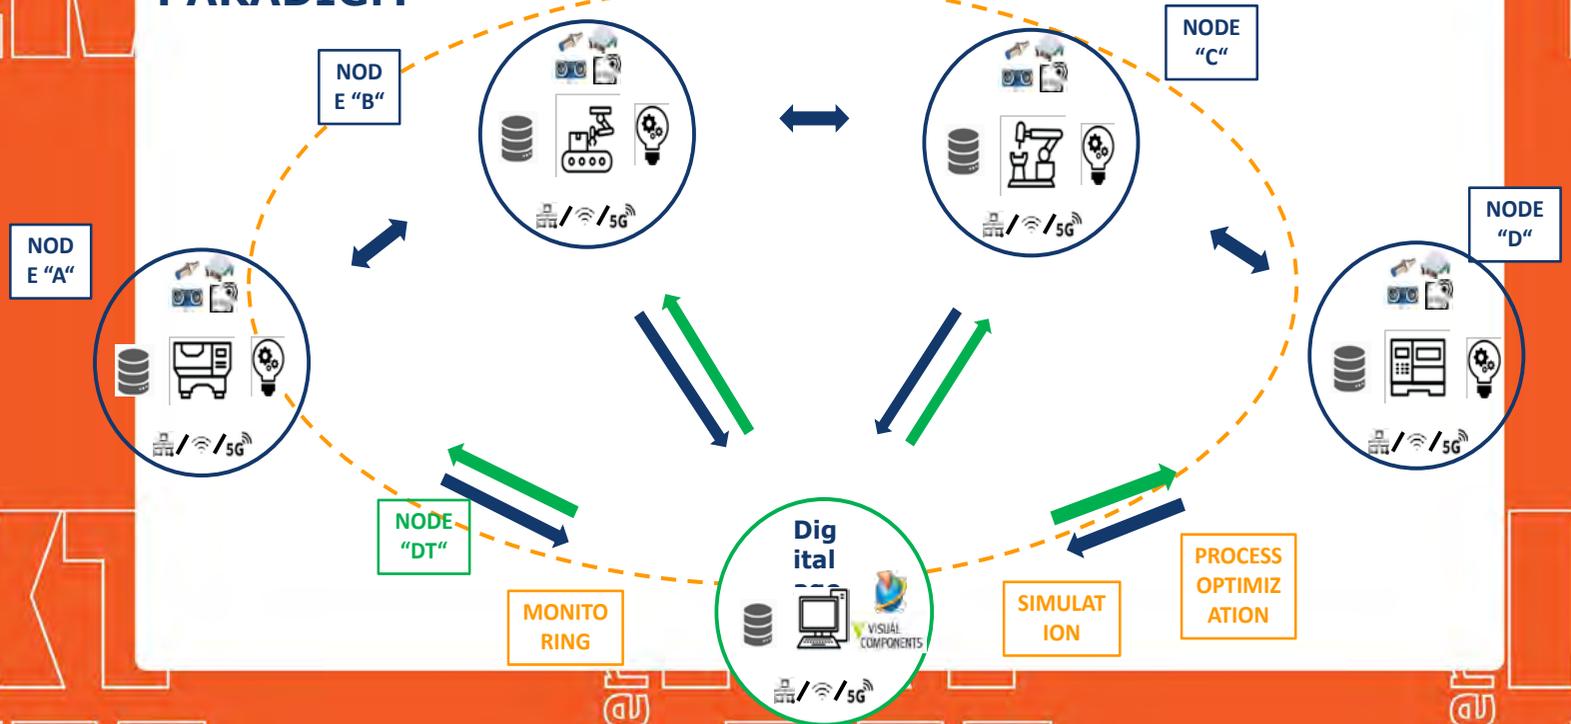

V VISUAL
COMPONENTS

SIEMENS

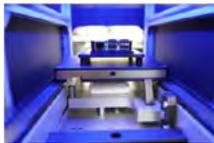

TECNOMATIX
Plant Simulation

DIGITAL TWIN + EC PARADIGM

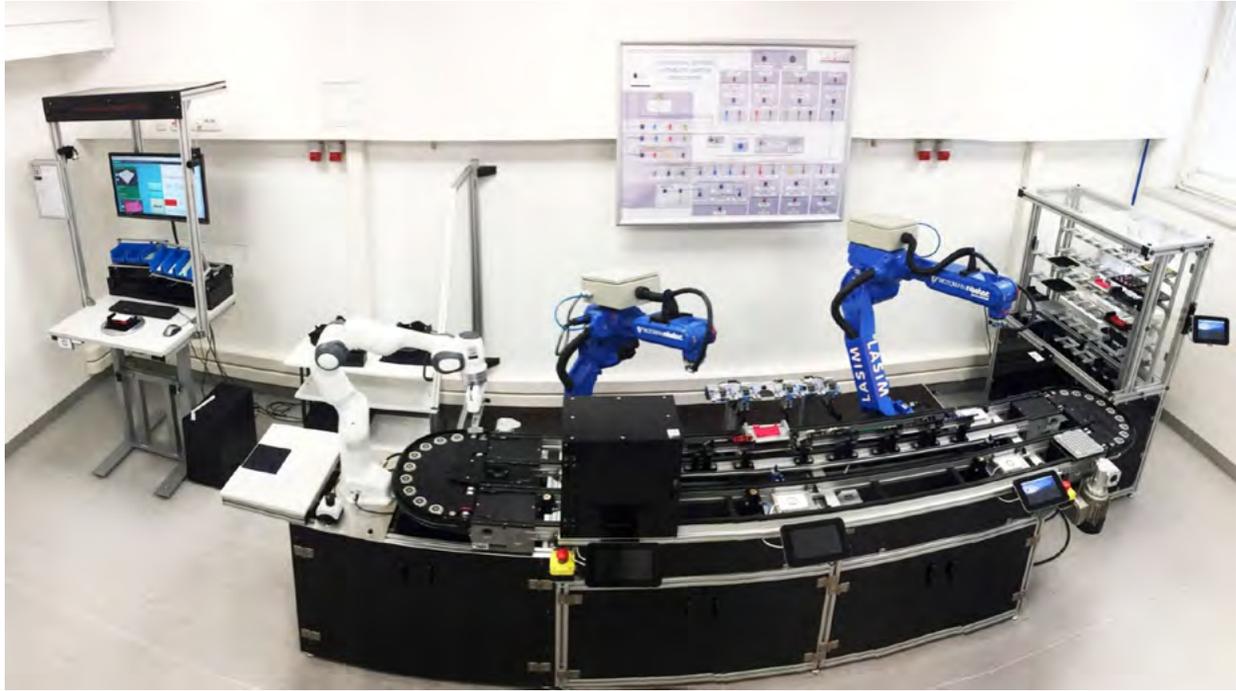

Concept implementation in laboratory environment of the Demonstration Center Smart Factory Lasim

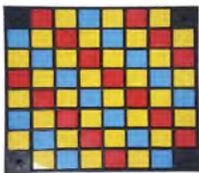

CONCEPT IMPLEMENTATION

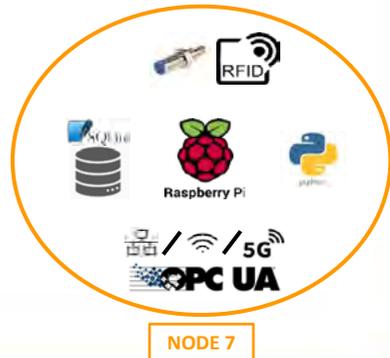

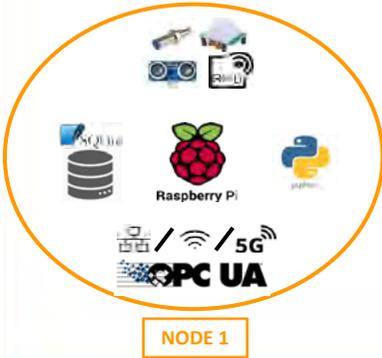

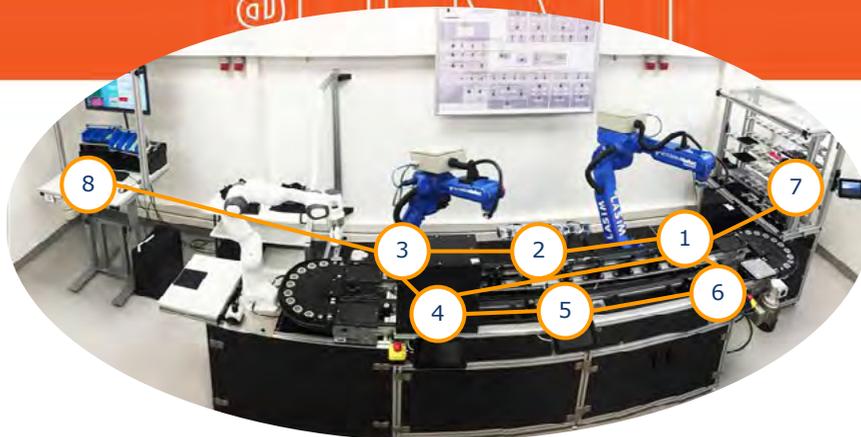

- Global digital agent (DA)
- DA for init state
- DA for order checking
- DA for order distribution on AS
- DA for robot task generation
- DA for disturbance prevention/elimination
- DA for order sequence optimization (FI algorithm)

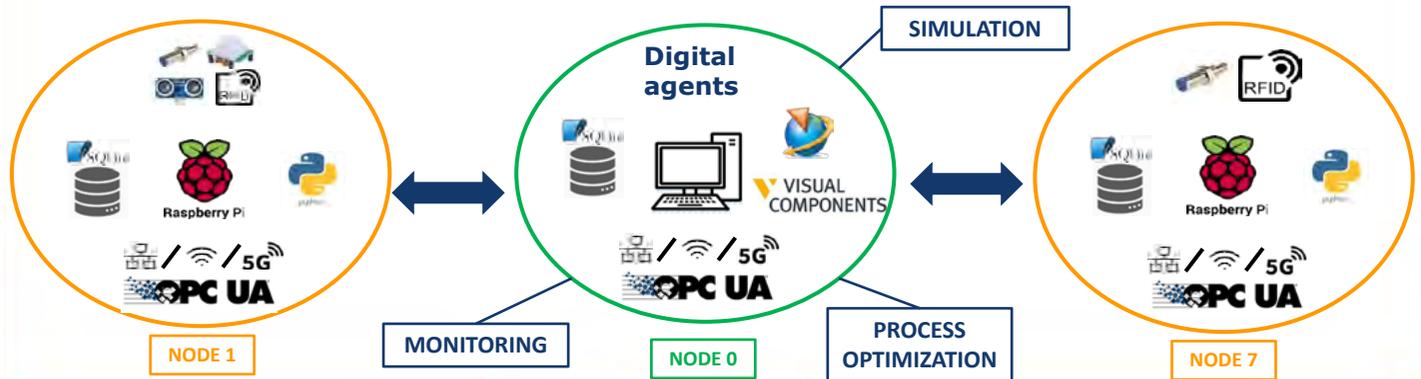

Products

International Conference for ICT, Electronics & Mechatronics IKTEM 2021

3D printing for the win

Jure Pigac

UNI MB GPE - Fakulteta za strojništvo, Univerza v Mariboru

Content

- Formula Student
- 3D printing
- FDM
- DMLS
- Sand 3D printing
- SLA

Formula Student – UNI MB GPE

- International student competitions
- Goal: design, build and race with a formula style race car
- Static and dynamic disciplines
- Combustion, electric and driverless classes
- GPE – 10 years in formula student combustion

Formula Student – UNI MB GPE

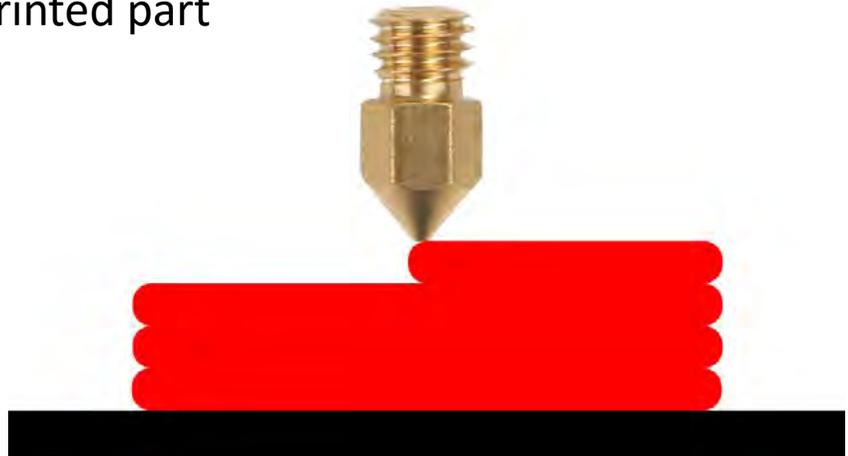

Why 3D printing?

- For rapid prototyping and small-scale production
- Affordable
- Can create complex shapes

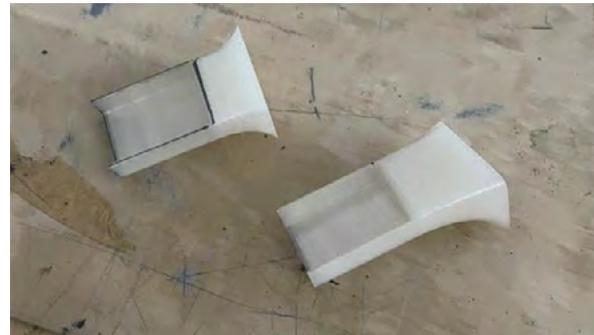

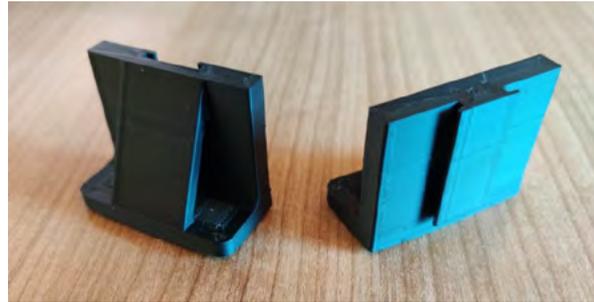

3D printing

- 3D printing - additive manufacturing
- Adding material layer by layer
- CAD -> G-code -> Printed part
- Different materials

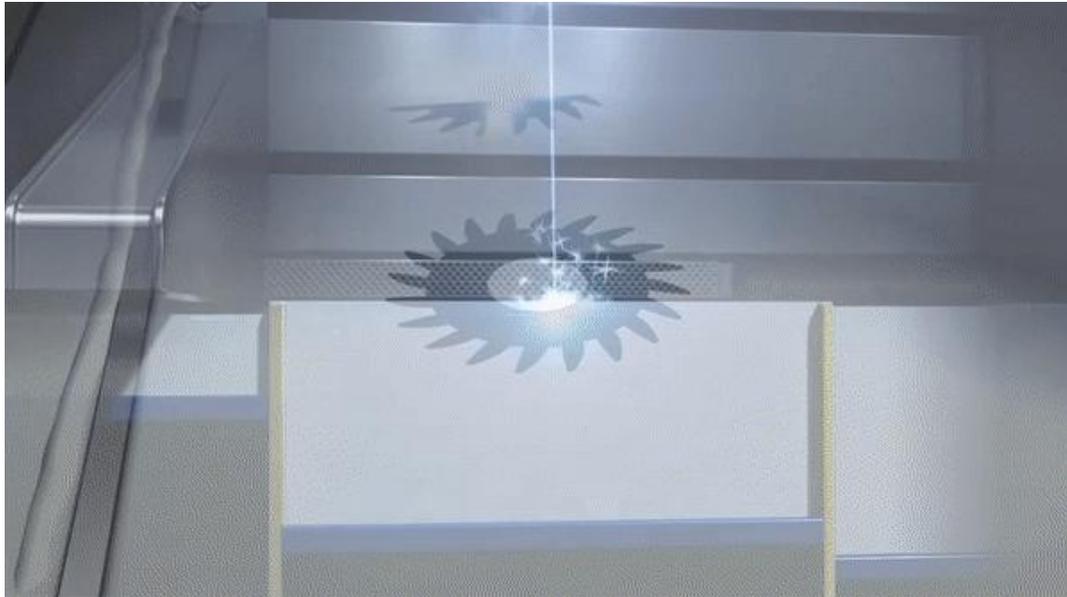

FDM - fused deposition modeling

- What?
 - Brackets
 - Housings
- Why?
 - Custom made parts
 - Very affordable
 - Fast and easy
- How?
 - Creality Ender 3
 - PLA & HTPLA

DMLS - Direct Metal Laser Sintering

DMLS -Direct Metal Laser Sintering

- What?
 - Brackets
 - Steering mechanism
- Why?
 - Complex geometry
- How?
 - MARSi group
 - Stainless steel

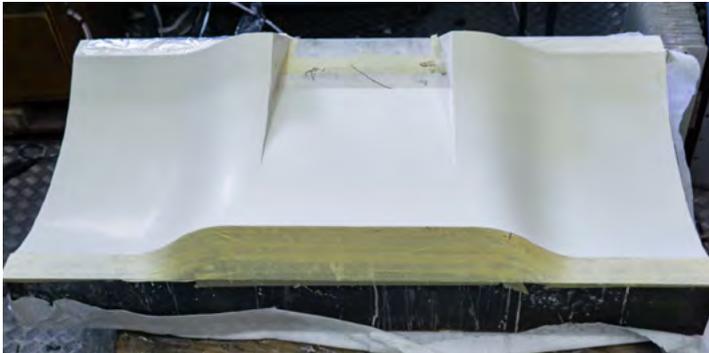

Sand 3D printing

- What?
 - Molds
- Why?
 - Complex geometry
 - Desired thermal properties
- How?
 - Roto Group

Sand 3D printing

Sand molds for composite parts

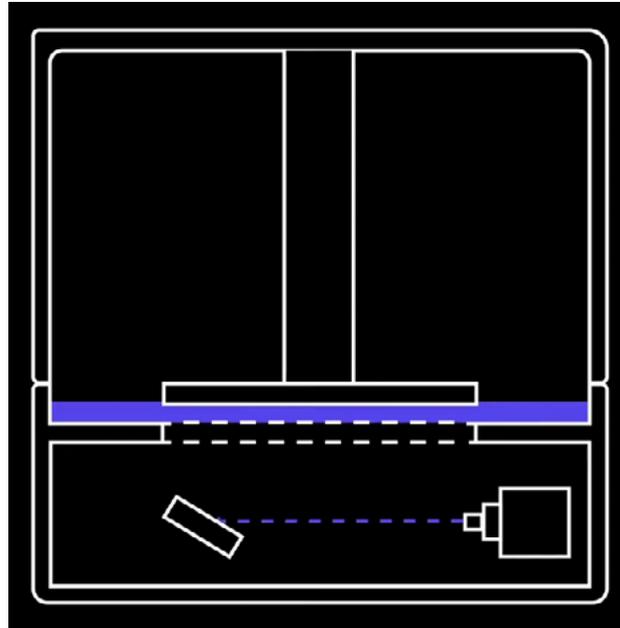

Sand 3D printing

Used for:

- Aerodynamics
- Chassis
- Powertrain

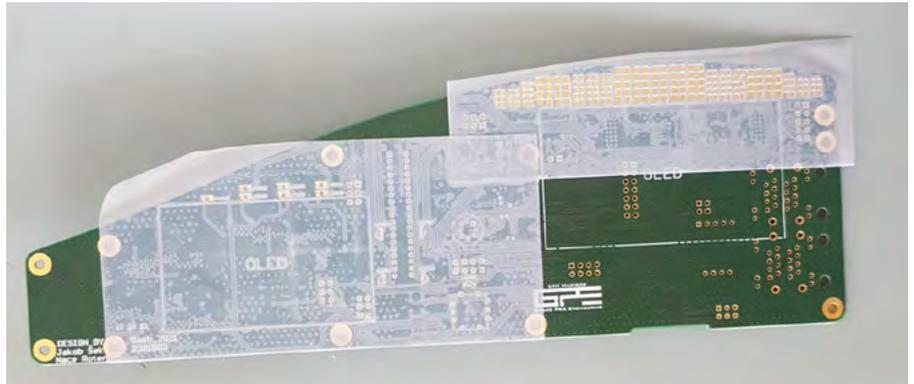

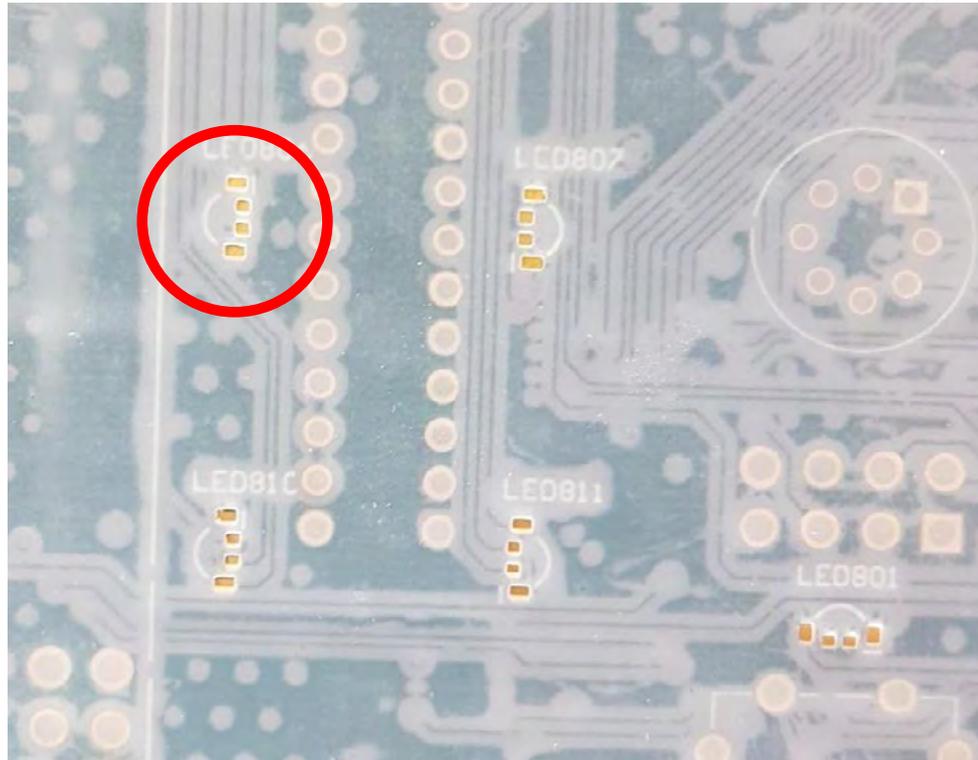

SLA - Stereolithography

SLA - Stereolithography

- What?
 - PCB stencils
- Why?
 - High accuracy
 - Affordable
 - Fast and easy
- How?
 - Auralix
 - Anycubic Mono SE
 - 3D Jake resin
 - No bed, 2 s exposure

Thank you for your attention!

BLOCK DIAGRAM

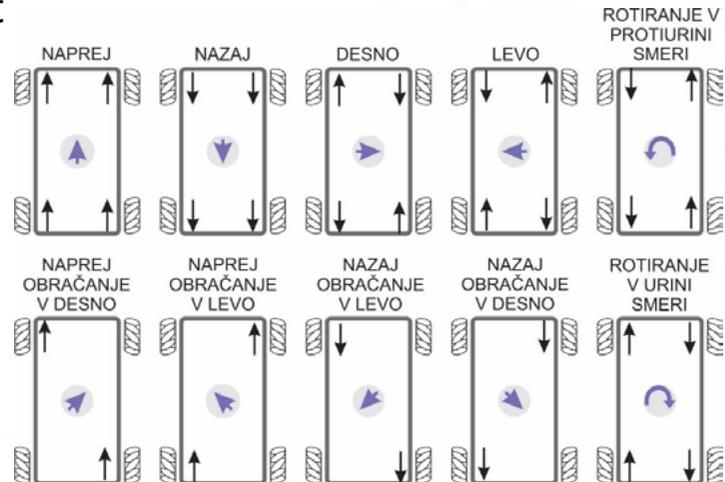

CONSTRUCTION

- 1,25 m x 0,46 m

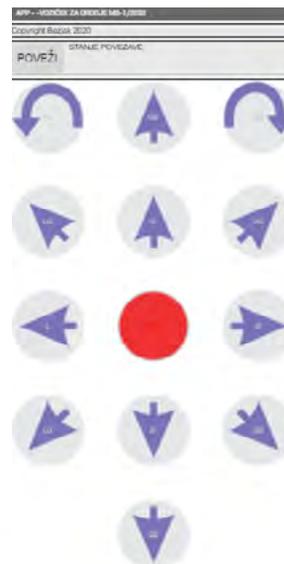

MECANUM WHEEL

- RobotShop.com
- 152 mm Mecanum Wheel Set
- Load capacity: 15 kg

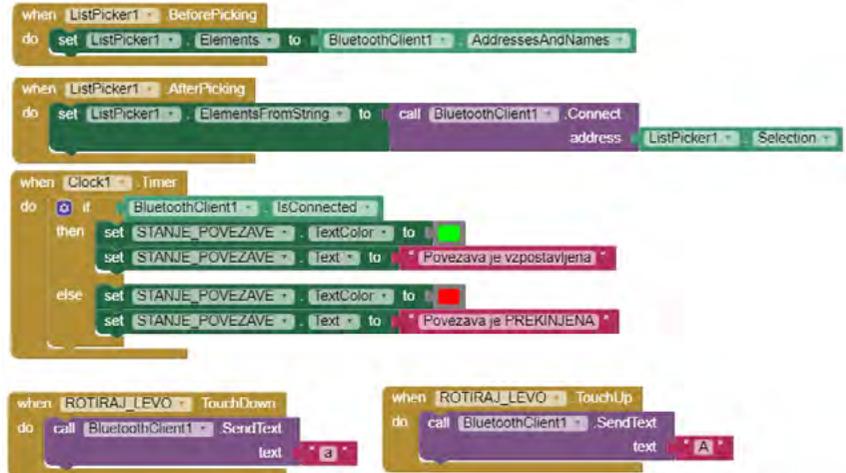

ANDROID APP / Designer

- MIT App Inventor
- Designer
 - Table
 - Create Buttons & Import
- Blocks

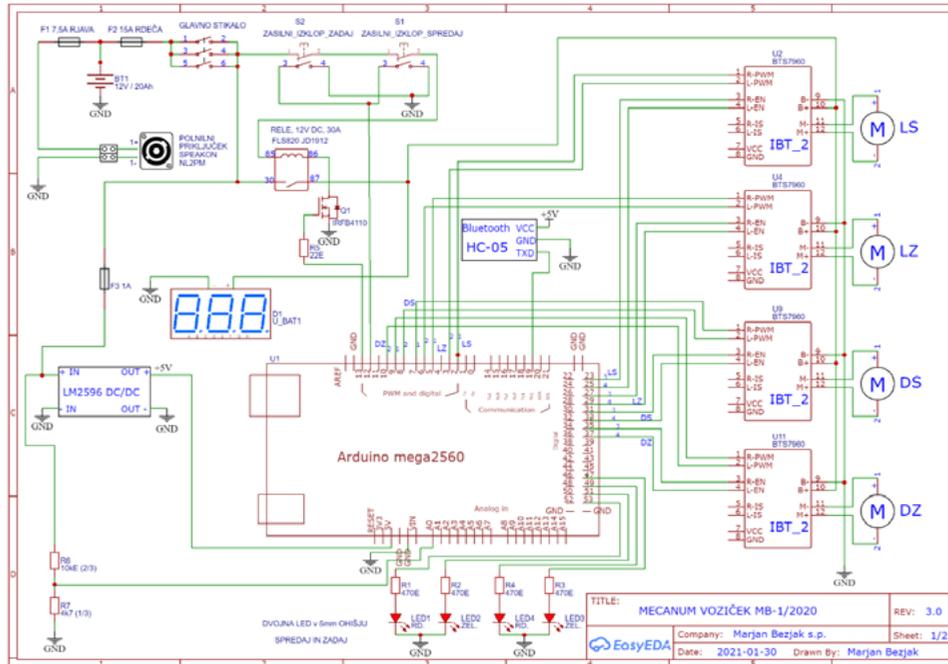

ANDROID APP / Blocks

- Bluetooth connection
- TouchDown / TouchUp
 - SendText

ELECTRICAL PLAN

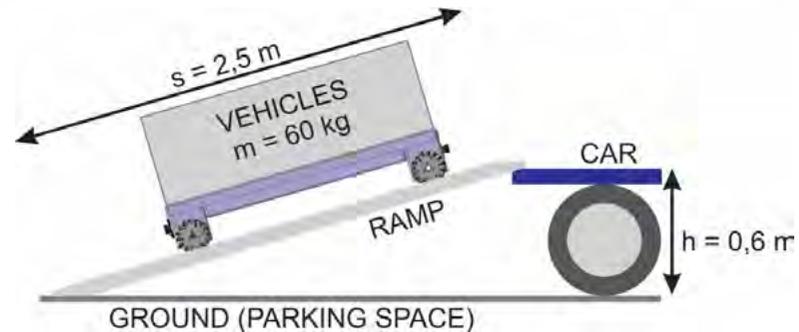

17. 06. 2021

mag. Marjan Bezjak

DRIVE - CALCULATION

- Weight: 60 kg
- Ramp slope
- Driving speed: 2 km/h
- Friction μ

- Power of electric motors $\rightarrow \rightarrow \rightarrow \rightarrow$

$$P = F_d \cdot v = 145 \text{ N} \cdot 0,42 \frac{\text{m}}{\text{s}} = 60 \text{ W}$$

$$F_{tr} = F_s \cdot \mu = 582 \text{ N} \cdot 0,3 = 174 \text{ N}$$

$$P = F \cdot v = 319 \text{ N} \cdot 0,42 \frac{\text{m}}{\text{s}} = 134 \text{ W}$$

ELECTRIC MOTORS

- Brushed DC electric motor with worm gear
- Use: front windscreen wiper drive
- 60 RPM, $P = 40 \text{ W}$ ($4 \times \dots = 160 \text{ W}$)

- It is necessary to disconnect from housing!

H-BRIDGE: BTS7960

- **IBT_2**: BTS7960
- 43 A
- 6 V – 27 V
- PWM to 25 kHz

- 1、 RPWM : Forward level or PWM signal input, active high
- 2、 LPWM : Inversion level or PWM signal input, active high
- 3、 R_EN : Forward drive enable input , high enable , low close
- 4、 L_EN : Reverse drive enable input , high enable , low close
- 5、 R_IS : Forward drive -side current alarm output
- 6、 L_IS : Reverse drive -side current alarm output
- 7、 VCC : +5 V power input, connected to the microcontroller 5V power supply
- 8、 GND : Signal common ground terminal

SOFTWARE SOLUTION - ARDUINO

- ARDUINO MEGA
- Bluetooth HC-05

```
//Serijska komunikacija:  
Serial.begin(9600); // Komunikacija za izpis na serijski monitor (biti/s)  
Serial1.begin(9600); // priklop Bluetooth modula HC-05 na Rx1 in Tx1 (biti/s)
```

```
// zacetne nastavitve v programu:  
cas_za_PWM = 1; // cas med povecevanjem in zmanjsevanjem PWM [milisekunde]  
pristevamo = 2; // uporabljamo za pristevanje k PWM (hitrost mehkega zagona)  
odstevamo = 10; // uporabljamo za odstevanje k PWM (hitrost mehkega pojemanja)  
PWM_MAX_manjsi = 150; // omogoca spreminjanje najvisje hitrosti za manjso hitrost  
PWM_MAX_vecji = 255; // omogoca spreminjanje najvisje hitrosti za vecjo hitrost  
PWM_izklop_sp_meja = 30; // pri upocasnjevanju izklopi izpisovanje PWM in da PWM=0
```
