- Septembra so direktorji tendenze v predelovalnih dejavnostih ocenili enako kot pretekli mesec – desezonirana vrednost kazalca zaupanja je bila v septembru enaka kot v avgustu. V primerjavi z istim mesecem lani je bila ta vrednost za 6 odstotnih točk višja ter za 9 odstotnih točk nad lanskim povprečjem.
- Na gibanje kazalca zaupanja v tem mesecu so vplivale večje zaloge končnih izdelkov, višja raven skupnih naročil ter nespremenjena proizvodna pričakovanja, vendar se je njihovo gibanje ravno iznicoilo, tako da je vrednost kazalca zaupanja ostala enaka kot pretekli mesec.
- Kazalci stanj so se v primerjavi s preteklim mesecem večinoma izboljšali. Pričakovanja za naslednje tri mesece, če izvzamemo pričakovano skupno povpraševanje, so ugodna.
- In September managers estimated business tendencies in manufacturing the same as in the previous month. The seasonally adjusted value of the confidence indicator was the same as in August 2004. Compared to September 2003 it was up by 6 percentage points and 9 percentage points above last year's average.
- The evolution of the confidence indicator in this month was influenced by the rise of stocks of finished products and overall order books as well as by the unchanged production expectations; however their opposite influence on the confidence indicator caused no change in its value.
- Observed indicators for appreciation of the situation improved compared to the previous month. The expectations for the next three months are favourable, except for expected total demand.

METODOLOŠKA POJASNILA

NAMEN STATISTIČNEGA RAZISKOVANJA

Namen kvalitativne Ankete o poslovnih tendencah (PA-IND/M) je mesečno pridobivanje informacij o trenutnih stanjih glavnih ekonomskega kazalcev ter ocenitev njihovega gibanja v naslednjih mesecih. Rezultati anket so osnova za izračun kazalca zaupanja v predelovalnih dejavnostih in kazalca gospodarske klime, ki vključuje poleg kazalca zaupanja v predelovalnih dejavnostih tudi kazalec zaupanja pri potrošnikih in kazalec zaupanja v trgovini na drobno.

Panelno anketo o poslovnih tendencah v predelovalnih dejavnostih izvajamo v Sloveniji od aprila 1995 s poenotenim vprašalnikom, na podlagi poenotene metodologije in z enako periodiko, kot jo izvajajo v državah članicah Evropske unije že več desetletij. Zato so vsi podatki neposredno primerljivi.

ENOTA OPAZOVANJA

Opazujemo podjetja, ki so razvrščena v predelovalne dejavnosti, to je v oddelki Standardne klasifikacije dejavnosti (SKD) od 15 do 36, ter so bila izbrana v panel podjetij na podlagi dveh meril:

- ❖ velikosti podjetja (število zaposlenih, skladno z zakonom o gospodarskih družbah) in
- ❖ razvrstitev podjetja po SKD-ju.

VIRI

Na vprašalnik odgovarjajo direktorji podjetij ali drugi vodilni delavci med 1. in 10. v mesecu. Rezultate pa objavimo že okoli 20. v istem mesecu.

ZAJETJE

V panelni vzorec smo zajeli vas velika podjetja, 56 % srednjevelikih (ali 59 % zaposlenih) in 18 % malih podjetij (ali 20 % zaposlenih). Panelni vzorec pokriva 37 % podjetij vzorčnega okvira ali 74 % zaposlenih v predelovalnih dejavnostih.

NAČIN ZBIRANJA PODATKOV

Anketo izvajamo mesečno po pošti, vsako četrletje (januar, april, julij in oktober) pa mesečni anketi dodamo še sedem četrletnih vprašanj.

UTEŽEVANJE ODGOVOROV

Odgovori so uteženi tako, da odražajo relativno pomembnost posameznega podjetja v vzorcu. Znotraj oddelkov SKD so odgovori uteženi s številom zaposlenih.

NEODGOVORI

Neodgovore vsak mesec obdelamo skladno s poenoteno metodologijo; delež neodgovorov se giba med 3-15 % (povprečno 9 %).

DEFINICIJE

Grafikoni prikazujejo ravnotežja po posameznih vprašanjih. Ravnotežje je razlika med pozitivnimi in negativnimi odgovori, izražena v odstotkih. Ravnotežja prikazujejo gibanje opazovanih ekonomskeih spremenljivk (stanj in pričakovanj), ne pa dejanskih velikosti ekonomskega kazalcev.

METHODOLOGICAL EXPLANATIONS

PURPOSE OF STATISTICAL SURVEY

The purpose of the qualitative Survey on Business Tendency (hereinafter: PA-IND/M) is to get monthly information about current situations of major economic indicators and to evaluate their movement in the following months. The results of the survey are the basis for evaluation of the confidence indicator in manufacturing and latter on also for the sentiment indicator, which also includes the consumer confidence indicator and the confidence indicator in retail trade.

We have been carrying out the Survey on Business Tendency in Manufacturing in Slovenia since April 1995 with the harmonised questionnaire, methodology and periodicity, which have been used in EU Member States for several decades. Therefore, all data are directly comparable.

OBSERVATION UNITS

We are monitoring units that are registered in manufacturing - divisions 15 to 36 of the Standard Classification of Activities (SKD). They were selected into the panel by two criteria:

- ❖ the size of the enterprise (the number of employees in accordance with the Companies Act) and
- ❖ the classification of the enterprise according to the SKD.

SOURCES

Persons responding to the monthly questionnaire are managers of enterprises or other executives. They respond between the 1st and the 10th in the month. Results are published approximately on the 20th of the current month.

COVERAGE

The panel includes all large enterprises, 56% of medium-sized enterprises (or 59% of employees) and 18% of small enterprises (or 20% of employees); the panel covers 37% of the enterprises of the studied population or 74% of employees in manufacturing.

METHOD OF DATA COLLECTING

The survey is carried out monthly by mail, each quarter (January, April, July and October) we are including seven more questions to the monthly survey.

WEIGHTS FOR RESPONSES

Responses to individual questions are weighted so that they reflect relative importance of individual enterprise in the panel. Inside divisions of Standard Classification of Activities (SKD) responses are weighted with the number of employees.

NON-RESPONSES

Non-responses are processed every month in accordance with the harmonised methodology and vary between 3 and 15% (9% on average).

DEFINITIONS

The charts show the balance by individual questions. The balance is the difference between positive and negative answers, expressed in percent. The balance shows the movement of observed economic variables (present situation and future expectations), and not the real size of economic indicators.

Ko so prikazane dalje časovne vrste podatkov ali primerjave kazalcev z EU so vrednosti desezonirane. To so vrednosti, pri katerih je izključen vpliv sezone, vsebujejo pa trend-cikel in naključno komponento. Podatki za EU so desezonirani z metodo DAIINTIES, za Slovenijo pa z metodo TRAMO/SEATS, ki temelji na ARIMA modelih. Pri oblikovanju modelov je upoštevano časovno obdobje od marca 1995 do januarja 2004. Zaradi narave podatkov se modeli za leto 2004 razlikujejo v primerjavi z modeli za leto 2003 le pri kazalcu zaupanja. Zaradi narave podatkov časovna vrsta Ustreznost proizvodnih zmogljivosti ni desezonirana, saj sezonska komponenta ni prisotna.

Kazalec zaupanja je povprečje odgovorov (ravnotežij) na vprašanja o proizvodnih pričakovanjih, skupnih naročilih in zalogah končnih izdelkov (obrnjen predznak).

OBJAVLJANJE PODATKOV

Sodelujoči v anketi prejmejo informacijo o oddelku SKD, v katerega se po dejavnosti razvrščajo in o predelovalnih dejavnostih, vendar le, če so izpolnili vprašalnici za tekoči mesec.

Drugim uporabnikom so dostopni podatki na ravni predelovalnih dejavnosti in njenih oddelkov in po velikostnih razredih podjetij. Podatki so mesečno objavljeni v Statističnih informacijah – Poslovne tendence v predelovalnih dejavnostih in v podatkovni bazi SI-STAT na naslovu <http://www.stat.si/>.

In the charts with longer time series or by comparisons with EU indicators, data are seasonally adjusted. Values are adjusted for seasonal component, which include trend-cycle component and irregular component. Data for EU are seasonally adjusted by DAIINTIES method and for Slovenia by TRAMO/SEATS method, which is based on ARIMA models. The designing of the models is based on the time period from March 1995 till January 2004. Because of the nature of data, models for 2004 differ from those used in 2003 only by confidence indicator. Because of the nature of data the series Current production capacity is not seasonally adjusted, because of absence of seasonal component.

The confidence indicator is defined as the arithmetic mean of the answers (balances) to the questions on production expectation, assessment of overall order books and assessment of stocks of finished products (the latter with inverted sign).
