

18 ENERGETIKA ENERGY

št./No 1

LETNA ENERGETSKA STATISTIKA, SLOVENIJA, 1996 - 2002 ANNUAL ENERGY STATISTICS, SLOVENIA, 1996 - 2002

- Statistični urad je v letu 2001 uvedel nov sistem zbiranja energijskih podatkov. Od takrat se zbirajo podatki z 11 mesečnimi in letnimi vprašalniki, ki so v celoti usklajeni s predpisi oziroma priporočili Evropske unije za področje statistike energetike.
- Proizvodnja električne energije na pragu se je v zadnjih petih letih povečala za dobro desetino, v zadnjem letu za 1,4 %. Končna poraba električne energije pa se je od leta 1997 povečala za petino, od tega v zadnjem letu za 7,4 %. Povečuje se tudi uvoz električne energije, ki se je v zadnjem letu povečal za petino!
- Največ električne energije je bilo v letu 2002 proizvedene v jedrski elektrarni (39 %), sledi ji proizvodnja v konvencionalnih termoelektarnah (37 %) in proizvodnja v hidroelektarnah (24 %).
- Poraba toplote se je v zadnjem letu zmanjšala kar za 6 %. Za enak odstotni delež se je zmanjšala tudi poraba zemeljskega plina. Tudi pri porabi ekstra lahkega kurilnega olja je opazno zmanjševanje porabe, kar je verjetno posledica milejše zime.
- Pri motornih bencinih se je poraba v zadnjem letu zmanjšala za 4 %, močno pa je povečala poraba dizelskega goriva, kar za 11 %.
- Slovenija z razpoložljivimi primarnimi energetskimi viri pokriva približno polovico potreb po primarni energiji, kar je podobno kot pri večini držav članic Evropske unije. Močno pa Slovenija presega evropsko povprečje v energetski intenzivnosti. Le-to je mogoče izboljšati, torej zmanjšati z izboljšanjem energetske učinkovitosti.
- Delež obnovljivih virov v oskrbi z energijo je 11 %, medtem ko je delež električne energije proizvedene iz obnovljivih virov, v celotni proizvodnji kar 24 %, kar močno presega evropsko povprečje.
- The statistical office introduced a new energy data collecting system in 2001. Since then the data have been collected with 11 monthly and annual surveys. Questionnaires are in compliance with the recommendations of the European Union for the energy statistics.
- Net electricity production increased in the last five years by one-tenth, in the last year by 1.4%. Final electricity consumption increased since 1997 by one-fifth, in the last year by 7.4%. Import of electricity has also been increasing, in the last year it increased by one-fifth!
- The Majority of electricity in 2002 was produced in the nuclear power plant (39%). In conventional thermal power plants 37% was produced and in hydro power plants 24%.
- Final consumption of heat decreased in the last year by 6%. Decrease in final consumption of natural gas was the same. Also the consumption of extra light fuel oil is decreasing, probably as a result of mild winter.
- Consumption of motor gasoline decreased in the last year by 4%, on the other hand the consumption of diesel oil increased by 11%!
- Energy dependency of Slovenia is approximately 50%, which is close to the average of the European Union. Energy intensity in Slovenia is much higher than the the European average. It could be improved with energy efficiency improvement.
- The share of renewable energy in total primary energy supply is 11%, while the share of electricity produced from renewable sources in total electricity production is 24%, which is well above the European average.

1. ELEKTRIČNA ENERGIJA ELECTRICITY

1.1 Letna bilanca proizvodnje in porabe električne energije, Slovenija, 1996–2002

Annual balance of production and consumption of electricity, Slovenia, 1996–2002

GWh

	1996	1997	1998	1999	2000	2001	2002

METODOLOŠKA POJASNILA

Viri in metode zbiranja podatkov

Prikazani podatki so rezultat naslednjih statističnih raziskovanj:

E1-EE/L je letno poročilo o proizvodnji električne in toplotne energije v elektrarnah. Z njim zbiramo podatke o proizvodnji (po vrstah goriva) in prodaji električne in toplotne energije, porabi goriv v elektrarnah ter vrstah, številu in močeh strojev, ki poganjajo generatorje.

E2-SP/L je letno poročilo samoproizvajalcev električne in toplotne energije. Z njim zbiramo podatke o proizvodnji (po vrstah goriva), porabi in prodaji električne in toplotne energije, porabi goriv pri samoproizvajalcih ter vrstah, številu in močeh strojev, ki poganjajo generatorje.

E3-TOP/L je letno poročilo o oskrbi s toplotno energijo. Z njim zbiramo podatke o proizvodnji toplotne energije po vrstah goriva, nabavi toplotne energije, porabi goriv za proizvodnjo toplotne energije, prodaji toplotne energije po sektorjih ter o omrežju daljinskega ogrevanja.

E4-EEP/L je letno poročilo o prenosu električne energije. Z njim zbiramo podatke o nabavi in oddaji električne energije na nivoju prenosnega omrežja, uvozu in izvozu električne energije ter izgubah v prenosnem omrežju.

METHODOLOGICAL EXPLANATIONS

Sources and methods of data collection

Presented data are the results of the following statistical surveys:

E1-EE/L is an annual report of electricity and heat production in public power plants. With the report the data on production (by energy source) and sale of electricity and heat, on fuel consumption in public plants as well as on types, number and power of engines that drive generators are collected.

E2-SP/L is an annual report of autoproducers. With the report the data on production (by energy source), consumption and sale of electricity and heat, on fuel consumption by autoproducers as well as on types, number and power of engines that drive generators are collected.

E3-TOP/L is an annual report of heat supply. With the report the data on production of heat by energy source, on purchase of heat, on fuel consumption in heat only plants, on distribution of heat as well as on heat pipelines are collected.

E4-EEP/L is an annual report of electricity transmission. With the report the data on purchase, transmission, import, export of electricity and on losses in transmission grid are collected.

E5-EED/L je letno poročilo o distribuciji električne energije. Z njim zbiramo podatke o nabavi in oddaji električne energije na nivoju distribucijskega omrežja, izgubah v distribucijskem omrežju ter podatke o lastnih elektrarnah.

E6-NAF/L je letno poročilo o proizvodnji in oskrbi s surovo nafto, zemeljskim plinom, petrokemičnimi surovinami, aditivi in drugimi ogljikovodiki. Z njim zbiramo podatke o proizvodnji, uvozu, izvozu, lastni porabi surove nafte, zemeljskega plina, plinskega kondenzata, aditivov in drugih ogljikovodikov.

E7-NP/L je letno poročilo proizvajalcev naftnih proizvodov. Z njim zbiramo podatke o proizvodnji, uvozu, izvozu, reciklaži, lastni porabi, reklasifikaciji, prodaji in zalogah naftnih proizvodov.

E8-NPT/L je letno poročilo o trgovini z naftnimi proizvodi. Z njim zbiramo podatke o prodaji naftnih proizvodov trgovskim podjetjem, energetskemu sektorju, predelovalnim dejavnostim in rudarstvu, gradbeništvu, cestnem in železniškem prometu, gospodinjstvom in ostalim.

E9-PL/L je letno poročilo o oskrbi s plini. Z njim zbiramo podatke o uvozu, nakupu, prodaji, lastni porabi in izgubah zemeljskega plina in utekočinjenega naftnega plina.

E10-TGT/L je letno poročilo o trgovini s trdnimi gorivi. Z njim zbiramo podatke o uvozu, nakupu, prodaji, izvozu, zalogah, kurilnosti in vsebnosti žvepla trdnih goriv.

E11-TG/L je letno poročilo o pridobivanju premoga. Z njim zbiramo podatke o proizvodnji, prodaji in izvozu rjavega premoga in lignita.

Poleg tega so uporabljeni še podatki o porabi energije in goriv v predelovalnih dejavnostih iz **mesečnega poročila industrije** ter iz letnih poročil s področja gradbeništva in prometa.

Zajetje

V statistično raziskovanje o proizvodnji električne in toplotne energije v elektrarnah (E1-EE/L) so vključeni poslovni subjekti, katerih osnovna dejavnost je proizvodnja električne energije. Zajetje je popolno.

V statistično raziskovanje samoproduktov električne in toplotne energije (E2-SP/L) so vključeni poslovni subjekti, ki poleg svoje osnovne dejavnosti proizvajajo tudi električno in/ali toplotno energijo za lastne potrebe in prodajo. Zajetje je popolno.

V statistično raziskovanje o oskrbi s toplotno energijo (E3-TOP/L) so vključeni poslovni subjekti, ki proizvajajo in/ali distribuirajo toplotno energijo. Zajetje je popolno.

V statistično raziskovanje o prenosu električne energije (E4-EEP/L) je vključeno podjetje za prenos električne energije. Zajetje je popolno.

V statistično raziskovanje o distribuciji električne energije (E5-EED/L) so vključeni poslovni subjekti za distribucijo električne energije. Zajetje je popolno.

V statistično raziskovanje o proizvodnji in oskrbi s surovo nafto, zemeljskim plinom, petrokemičnimi surovinami, aditivi in drugimi ogljikovodiki (E6-NAF/L) je vključena rafinerija. Zajetje je popolno.

E5-EED/L is an annual report of electricity distribution. With the report the data on purchase and distribution of electricity, on losses in distribution grid as well as on distribution power plants are collected.

E6-NAF/L is an annual report of production and supply with crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons. With the report the data on extraction, import, export, own use of crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons are collected.

E7-NP/L is an annual report of petroleum products production. With the report the data on production, import, export, recycling, own use, products transfer, sale as well as on stocks of petroleum products are collected.

E8-NPT/L is an annual report of petroleum products trade. With the report the data on sale of petroleum products to trade companies, energy sector, manufacturing and mining sector, construction sector, road and rail transport, households and other sectors are collected.

E9-PL/L is an annual report of gas supply. With the report the data on import, purchase, sale, own use and losses of natural gas and liquefied petroleum gas are collected.

E10-TGT/L is an annual report of solid fuels trade. With the report the data on import, purchase, sale, export, and stocks as well as on calorific values and sulphur content of solid fuels are collected.

E11-TG/L is an annual report of coal extraction. With the report the data on production, sale and export of brown coal and lignite are collected.

In addition, the data on energy and fuels consumption in manufacturing sector from **Monthly Industry Report** and from annual construction and transport reports are used.

Coverage

The statistical survey of electricity and heat production in public power plants (E1-EE/L) covers public supply undertakings, which generate electricity for sale to third parties as their primary activity. The survey has full coverage.

The statistical survey of autoproductors (E2-SP/L) covers autoproducter undertakings, which generate electricity and/or heat wholly or partly for their own use as an activity which supports their primary activity. The survey has full coverage.

The statistical survey of heat supply (E3-TOP/L) covers heat only plants and heat distribution companies. The survey has full coverage.

The statistical survey of electricity transmission (E4-EEP/L) covers the electricity transmission company. The survey has full coverage.

The statistical survey of electricity distribution (E5-EED/L) covers electricity distribution companies. The survey has full coverage.

The statistical survey of production and supply with crude oil, natural gas, refinery feedstocks, additives and other hydrocarbons (E6-NAF/L) covers the refinery. The survey has full coverage.

V statistično raziskovanje proizvajalcev naftnih proizvodov (E7-NP/L) so vključeni poslovni subjekti, katerih osnovna dejavnost je proizvodnja naftnih derivatov. Zajetje je popolno.

V statistično raziskovanje o trgovini z naftnimi proizvodi (E8-NPT/L) so vključeni izbrani poslovni subjekti, ki trgujejo z naftnimi proizvodi. Kriterij izbora je vrednost uvoza oz. izvoza naftnih proizvodov v preteklem letu. Vključeni so vsi poslovni subjekti, ki so presegli prag 20 mio SIT.

V statistično raziskovanje o oskrbi s plini (E9-PL/L) so vključeni poslovni subjekti za oskrbo z zemeljskim plinom in utekočinjenim naftnim plinom. Zajetje je popolno.

V statistično raziskovanje o trgovini s trdnimi gorivi (E10-TGT/L) so vključeni izbrani poslovni subjekti, ki trgujejo s trdnimi gorivi. Kriterij izbora je vrednost uvoza oz. izvoza naftnih proizvodov v preteklem letu. Vključeni so vsi poslovni subjekti, ki so presegli prag 2 mio SIT.

V statistično raziskovanje o pridobivanju premoga (E11-TG/L) so vključeni poslovni subjekti s področja pridobivanja rjavega premoga in lignita. Zajetje je popolno.

Definicije in pojasnila

Delež obnovljivih virov energije v celotni proizvodnji električne energije je razmerje med količino električne energije proizvedene iz obnovljivih virov in celotno proizvodnjo električne energije.

Delež obnovljivih virov energije v oskrbi z energijo je razmerje med razpoložljivimi obnovljivimi viri in celotno oskrbo z energijo.

Energetska intenzivnost je razmerje med oskrbo z energijo in bruto domačim proizvodom, izraženim v stalnih cenah. Energetska intenzivnost se manjša z izboljšanjem energetske učinkovitosti.

Energetska odvisnost je razmerje med neto uvozom in oskrbo z energijo na nivoju države. Meri odvisnost države od uvoza energije.

Energetski sektor vključuje porabo goriv in energije pri aktivnostih kot so pridobivanje in proizvodnja goriv. Ne vključuje lastne porabe elektrarn in toplarn. V energetske sektor so vključena podjetja, ki opravljajo dejavnosti s področja Oskrba z elektriko, plinom in vodo (E) in s področij Pridobivanje energetskih surovin (CA) in Proizvodnja koksa, naftnih derivatov, jedrskega goriva (DF) po Standardni klasifikaciji dejavnosti.

GCV (gross calorific value) zgojevalna toplota ali zgornja kalorična vrednost je vsa pri zgojevanju sproščena toplota.

Javne elektrarne so podjetja, katerih osnovna dejavnost je proizvodnja električne ali električne in toplotne energije. Lahko so v privatni ali v javni lasti.

Maksimalna dnevna moč je največja moč, s katero je elektrarna obratovala en dan v opazovanem letu.

Nazivna moč generatorja je tista moč, ki je deklarirana s strani proizvajalca in je napisana tudi na generatorju samem.

The statistical survey of petroleum products production (E7-NP/L) covers petroleum products production companies. The survey has full coverage.

The statistical survey of petroleum products trade (E8-NPT/L) covers selected petroleum products trade companies. The sample frame is the list of units performing export or import of petroleum products in the last year. The cut-off of import/export values of SIT 20 Mio is applied to this population.

The statistical survey of gas supply (E9-PL/L) covers gas and LPG supply companies. The survey has full coverage.

The statistical survey of solid fuels trade (E10-TGT/L) covers selected solid fuels trade companies. The sample frame is the list of units performing export or import of solid fuels in the last year. The cut-off of import/export values of SIT 2 Mio is applied to this population.

The statistical survey of coal extraction (E11-TG/L) covers brown coal and lignite mines. The survey has full coverage.

Definitions and explanations

Share of renewable energy in total electricity is the ratio of electricity produced from renewable sources and total electricity production.

Share of renewable energy in TPES is the ratio of available renewable sources and total primary energy supply.

Energy intensity is the ratio of total primary energy supply and gross domestic product at constant prices. Energy intensity decreases with energy efficiency improvements.

Energy dependency is the ratio of net imports and total primary energy supply. It measures the extent to which the country relies on imports to meet its energy needs.

Energy sector includes fuel and energy that is consumed by the energy industry to support the extraction and production of fuels and transformation activities. It excludes own use of plants. The energy sector covers section Electricity, gas and water supply (E) and subsections Mining and quarrying of energy producing materials (CA) and Manufacture of coke, refined petroleum products and nuclear fuel (DF) of the national Standard Classification of Activities.

GCV (gross calorific value) measures the total amount of heat produced by fuel combustion.

Public plants are public supply undertakings, which generate electricity or electricity and heat as their primary activity. They may be privately or publicly owned.

Maximum daily power is the maximum power with which the power plant operated one day in the observed year.

Nominal power of generators is power declared by the producer and written on the generator.

NCV (net calorific value) kurilnost ali spodnja kalorična vrednost je tisti del zgorevalne toplote, ki jo dobimo, če dimne pline ohlajamo samo do temperature nad rosiščem vodne pare.

Obnovljivi viri vključujejo biomaso, bioplin ter industrijske in komunalne odpadke.

Oskrba z energijo je domača proizvodnja + uvoz - izvoz - mednarodna pomorska skladišča ± spremembe zalog. Pri preračunu hidro energije na nivo primarne energije je upoštevan izkoristek 100%. Ekvivalent primarne energije pri nuklearni energiji pa je izračunan iz proizvodnje na generatorju in ob upoštevanju izkoristka 33%.

Predelovalne dejavnosti in gradbeništvo vključujejo področje Predelovalne dejavnosti (D) brez podpodročja Proizvodnja koksa, naftnih derivatov, jedrskega goriva (DF) in področje Gradbeništvo (F) po Standardni klasifikaciji dejavnosti.

Razpoložljiva moč je moč, s katero lahko elektrarna obratuje daljši čas.

Samoproduvajalci so podjetja, ki poleg svoje osnovne dejavnosti proizvajajo še električno energijo in/ali toplotno energijo v celoti ali delno za lastne potrebe. Lahko so v privatni ali v javni lasti.

Sm³ standardni kubični meter pri 150C in 760 mm Hg.

Sprememba zalog je razlika med zalogami na začetku in zalogami na koncu obdobja.

Statistične razlike vključujejo vsoto nepojasnjenih statističnih razlik za posamezne kategorije goriv, ki lahko nastanejo zaradi uporabe različnih kurilnosti pri preračunu iz naravnih enot v enote za energijo.

TE-TO termoelektrarna-toplarna je objekt, ki je namenjen soproizvodnji električne in toplotne energije.

Tona ekvivalentne nafte (toe) je enota, ki izraža količino sproščene toplote pri zgorevanju ene tone nafte. Toe je računsko enota, ki se uporablja v glavnem za prikazovanje rabe energije v energetskih bilancah. 1000 toe = 41,868 TJ

Toplarne so podjetja, ki proizvajajo izključno toplotno energijo.

Transformacija vključuje porabo goriv za proizvodnjo električne in toplotne energije.

Trdna goriva vključujejo lignit, domači in uvoženi rjavi premog, koks, črni premog in antracit.

UNP utekočinjen naftni plin je butan, propan ali mešanica obeh.

Objavljanje

Letno: Statistične informacije. Energetika
Slovenija v številkah
Statistični letopis Republike Slovenije

NCV (net calorific value) measures the amount of heat that can be used. The other part is used for evaporation of fuel moisture.

Renewable sources comprise solid biomass, biogas, industrial and municipal waste.

Total primary energy supply is made up of indigenous production + imports - exports - international marine bunkers ± stock changes. Level of primary hydro energy is calculated from the hydro generation with the 100% efficiency. However, the primary energy equivalent of nuclear electricity is calculated from the gross generation by assuming a 33% conversion efficiency.

Manufacturing and construction covers section Manufacturing (D) without subsection Manufacture of coke, refined petroleum products and nuclear fuel (DF) and section Construction (F) of the Standard Classification of Activities.

Available power is power with which a power plant can operate for a longer time.

Autoproducers are autoproducer undertakings, which generate electricity and/or heat wholly or partly for their own use as an activity, which supports their primary activity. They may be privately or publicly owned.

Sm³ cubic meter standard conditions i.e. 150C and 760 mm Hg.

Stock change reflects the difference between opening stock level at the beginning of the period and closing level at the end of the period.

Statistical difference is a category which includes the sum of unexplained statistical differences for individual fuels. It also includes the statistical differences that arise because of the variety of conversion factors.

CHP plants are combined heat and power plants, which are designed to produce both heat and electricity.

Tonne of oil equivalent (toe) expresses the amount of heat equivalent to the heat of combustion of one tonne of oil. Toe is accounting unit which is used for expressing energy use in energy balances. 1000 toe = 41,868 TJ

Heat only plants are plants which are designed to produce heat only.

Transformation includes fuel consumption for electricity and heat production.

Solid fuels include lignite, domestic and imported brown coal, coke and hard coal.

LPG liquefied petroleum gas is butane, propane or a mixture of both.
