Presented at the 24th Annual Meeting of the Slovenian Chemical Society

Table of contents

Figure S1:	Harmonic IR absorption spectra of <i>cis</i>-HOOO[·] radical calculated on B3LYP/6-311++G(3df,3pd) level of theory.	3
Figure S2:	Harmonic IR absorption spectra of <i>trans</i>-HOOO[·] radical calculated on B3LYP/6-311++G(3df,3pd) level of theory.	3
Figure S3:	Optimised structures of the stable binary complexes with the B3LYP/6-311++G(3df,3pd) bond lengths and the CBS-QB3 binding energies. Dotted lines represent intermolecular formation of H-bonds.	5
Figure S4:	Optimised structures of the stable ternary complexes with the B3LYP/6-311++G(3df,3pd) bond lengths and the CBS-QB3 binding energies. Dotted lines represent intermolecular formation of H-bonds.	6
Table S1:	B3LYP/6-311++G(3df,3pd) calculated harmonic and anharmonic frequencies (ν) in cm^{-1} and IR absorption intensities (I) in km mol^{-1} of c-HTO and T-HTO radicals and precursors (water, methylamine, formic acid and sulphuric acid). Available experimental values are given.	3
Table S2	Thermodynamic properties (ΔH, $T\Delta S$ and ΔG) in kcal mol^{-1} and calculated K_c values in $\text{cm}^3 \text{molecules}^{-1}$ at different altitude (h) [km], temperature (T) [K] and pressure (p) [atm]. Calculated values correspond to the reaction: $x\text{-HTO-PR} + W \rightarrow x\text{-HTO-PR-W}$ (where x stands for the corresponding conformation of HOOO[·] radical and RP for the corresponding precursor molecule).	7

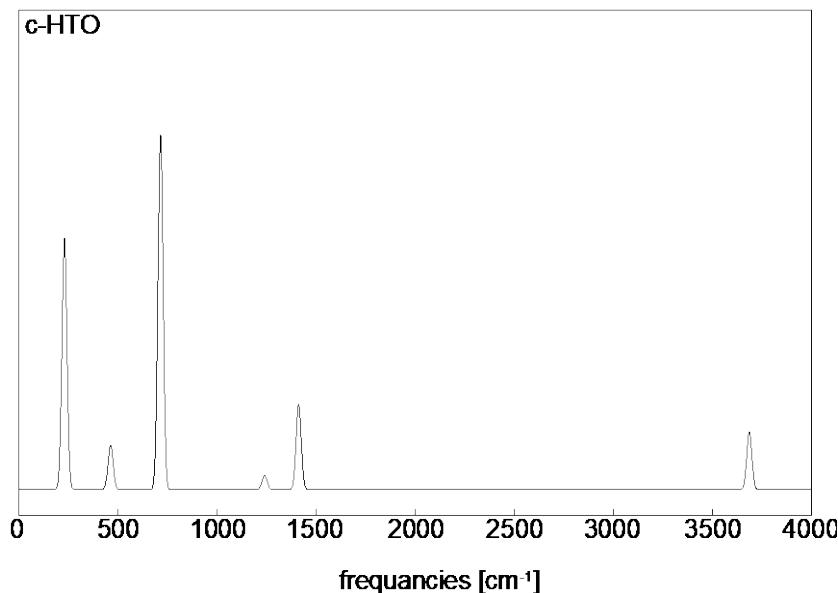

Figure S1: Harmonic IR absorption spectra of *cis*-HOOO[·] radical calculated on B3LYP/6-311++G(3df,3pd) level of theory.

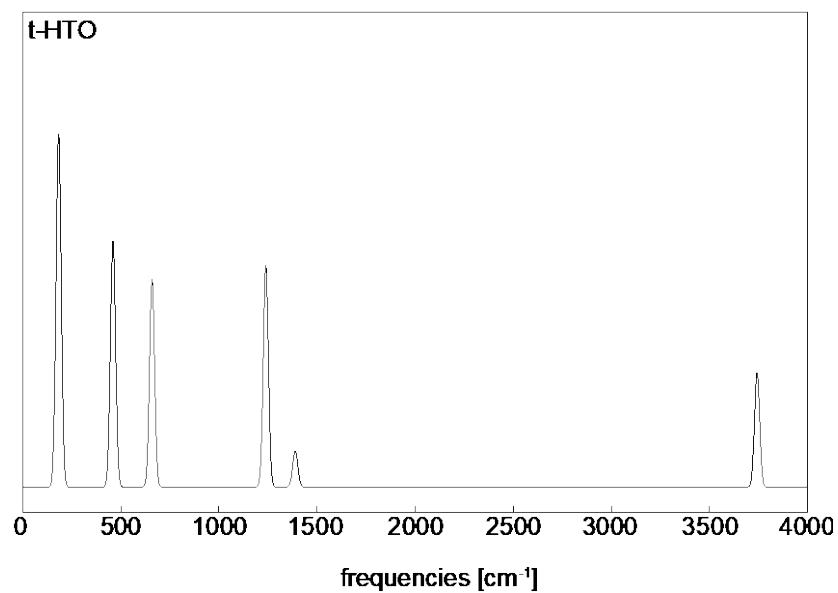

Figure S2: Harmonic IR absorption spectra of *trans*-HOOO[·] radical calculated on B3LYP/6-311++G(3df,3pd) level of theory.

Table S1: B3LYP/6-311++G(3df,3pd) calculated harmonic and anharmonic frequencies (ν) in cm⁻¹ and IR absorption intensities (I) in km mol⁻¹ of c-HTO and T-HTO radicals and precursors (water, methylamine, formic acid and sulphuric acid). Available experimental values are given.
