## METODOLOŠKA POJASNILA

### NAMEN STATISTIČNEGA RAZISKOVANJA

Namen kvalitativne Ankete o poslovnih tendencah v trgovini na drobno (vprašalnik PA-TRG) je mesečno pridobivanje informacij o trenutnih stanjih glavnih ekonomskeh kazalcev ter ocenitev njihovega gibanja v naslednjih mesecih. Rezultati anket so osnova za izračun kazalca zaupanja v trgovini na drobno.

Panelno anketo o poslovnih tendencah v trgovini na drobno izvajamo v Sloveniji od januarja 1999 s poenotenim vprašalnikom, na podlagi poenotene metodologije in z enako periodiko, kakor jo izvajajo v državah članicah Evropske unije že več desetletij, kar omogoča neposredno primerljivost podatkov.

### ENOTA OPАЗOVANJA

Opazujemo podjetja, ki so po Standardni klasifikaciji dejavnosti razvrščena v trgovino na drobno, in sicer v naslednja oddelka:

- 50 - Prodaja, vzdrževanje in popravila motornih vozil; trgovina na drobno z motornimi gorivi,
- 52 - Trgovina na drobno, razen z motornimi vozili; popravila izdelkov široke porabe.

Vzorec podjetij je oblikovan na podlagi dveh meril:

- razvrstitev trgovskega podjetja po SKD in
- velikosti trgovskega podjetja (prihodek, skladno z zakonom o gospodarskih družbah).

### VIRI

Na vprašalnik PA - TRG odgovarjajo direktorji podjetij ali drugi vodilni delavci med 1. in 10. v mesecu.

### ZAJETJE

V panelni vzorec smo zajeli vsa velika in srednje velika podjetja ter 26 % malih podjetij (ali 37 % prihodka malih podjetij), ki so razvrščena v dejavnost trgovine na drobno ali trgovine z motornimi vozili. Opisani panelni vzorec pokriva 36 % podjetij vzorčnega okvira ali 93 % prihodka v trgovini na drobno in trgovine z motornimi vozili.

### NAČIN ZBIRANJA PODATKOV

Anketo izvajamo mesečno po pošti.

### UTEŽEVANJE ODGOVOROV

Odgovori so uteženi tako, da odražajo relativno pomembnost posameznega podjetja v vzorcu. Znotraj razredov SKD so odgovori uteženi s prihodom.

### NEODGOVORI

Neodgovore vsak mesec obdelamo skladno s poenoteno metodologijo.

### DEFINICIJE IN POJASNILA

Ravnotežje je razlika med pozitivnimi in negativnimi odgovori, izraženimi v odstotkih. Ravnotežja prikazujejo gibanje opazovanih ekonomskeh kazalcev (stanj in pričakovanj), ne pa dejanskih velikosti ekonomskeh kazalcev. Grafikoni prikazujejo ravnotežja po posameznih vprašanjih.

## METHODOLOGICAL EXPLANATIONS

### PURPOSE OF THE STATISTICAL SURVEY

The purpose of the qualitative Survey on Business Tendency (questionnaire PA-TRG) is to get monthly information about current situations of major economic indicators and to evaluate their movement in the following months. The results of the survey are the basis for evaluation of the confidence indicator in retail trade.

We have been carrying out the Panel Survey on Business Tendency in Retail Trade in Slovenia since January 1999 with the harmonised questionnaire, methodology and periodicity, which have been used in EU Member States for several decades. Therefore, all data are directly comparable.

### OBSERVATION UNITS

We are monitoring units that are registered in retail trade or sale of motor vehicles in the following divisions:

- 50 - Sale, maintenance and repair of motor vehicles, retail sale of fuels
- 52 - Retail trade, except of motor vehicles, repair of personal and household goods

They were selected into the panel by two criteria:

- the classification of the enterprise according to the Standard Classification of Activities (SCA) and
- the size of the enterprises (turnover in accordance with the Law on Business Companies).

### SOURCES

Persons responding to the monthly PA-TRG questionnaire are managers of enterprises or other executives. They respond between the 1st and the 10th of the month.

### COVERAGE

The panel includes all large and medium-sized enterprises and 26% of small enterprises (or 37% of their turnover), the principal activity of which is classified into retail trade and sale of motor vehicles. The panel covers 36% of enterprises of the studied population or 93% of turnover in retail trade and sale of motor vehicles.

### METHOD OF DATA COLLECTING

The survey is carried out monthly by mail.

### WEIGHTS FOR RESPONSES

Responses to individual questions are weighted so that they reflect relative importance of an individual enterprise in the panel. Inside the SKD classes responses are weighted with the turnover.

### NON-RESPONSES

Non-responses are processed every month in accordance with the harmonized methodology.

### DEFINITIONS AND EXPLANATIONS

The **balance** is the difference between positive and negative answers, expressed in percent. The balance shows the movement of observed economic indicators (present situation and future expectations), and not the real size of economic indicators. The charts show the balance by individual questions.

Na grafih so prikazane desezonirane vrednosti. To so vrednosti, pri katerih je izključen vpliv sezone, vsebujejo pa trend-cikel in naključno komponento. Podatki za EU so desezonirani z metodo DAIINTIES, za Slovenijo pa z metodo TRAMO/SEATS, ki temelji na ARIMA modelih. Pri oblikovanju modelov smo upoštevali obdobje od januarja 1999 do januarja 2004. Pri prodajnih cehah, pričakovanih prodajnih cehah in ravnih prodajih sezonska komponenta ni prisotna.

**Kazalec zaupanja** je povprečje odgovorov (ravnotežij) na vprašanja o sedanjem in pričakovanim poslovni položaju in sedanjem obsegu zalog (obrnjen predznak).
