METODOLOŠKA POJASNILA

Namen statističnega raziskovanja

Zbrani podatki o cenah izdelkov in storitev služijo kot podlaga za izračun indeksov cen življenjskih potrebščin in indeksov cen na drobno, povprečnih nacionalnih cen ter še v nekatere druge namene.

Zajetje

Listo izdelkov in storitev sestavlja 631 predmetov (reprezentantov), ki so glede na svoje lastnosti in opise razvrščeni v 4 skupine: kmetijski pridelki, industrijski živilski in neživilski izdelki, storitve. V opazovanje so izbrani tisti izdelki oz. storitve, katerih deleži v skupni potrošnji so največji in katerih cene lahko najbolje odražajo gibanje cen sorodnih artiklov oz. splošno gibanje cen.

Način zbiranja podatkov

Cene zbira opazovalci cen v Kopru, Ljubljani, Mariboru in Novem mestu, in sicer za natančno določeno obdobje enkrat oz. dvakrat (kmetijski pridelki) mesečno na okoli 900 izbranih opazovalnih mestih. V vsakem kraju zberejo povprečno 4 cene na izdelek oz. storitev, kar mesečno znese skupaj okrog 11000 cen.

Primerljivost povprečnih cen v času

Primerljivost izdelkov ali storitev z enakim opisom v času, zlasti v daljšem časovnem obdobju, ni popolna. Zaradi tega je omejena tudi primerljivost povprečnih cen v času.

Definicije

Lista izdelkov in storitev je podroben seznam proizvodov, z opisi le-teh in merskimi enotami za količino izdelkov oz. storitev, na katero se nanaša navedena cena.

Opazovalno mesto je lahko vsako mesto, kjer poteka prodaja izdelkov in storitev potencialnim kupcem. To so lahko trgovine, tržnice, obrtne delavnice, storitvene in druge organizacije.

Drobnoprodajna cena je končna prodajna cena, ki jo plačajo potrošniki za nakup izdelkov ali storitev široke porabe. Vsebuje torej tudi predpisan davek in preostale dajatve.

Povprečno ceno izdelka oz. storitve v kraju izračunamo z navadno aritmetično sredino iz cen, zbranih za ta izdelek oz. to storitev na izbranih opazovalnih mestih v posameznem kraju.

Povprečno nacionalno ceno izdelka oz. storitve izračunamo s tehtano aritmetično sredino iz povprečnih krajevni cen. Kot uteži vzamemo količine teh izdelkov oz. storitev, ki so bile prodane v posameznem kraju.

METHODOLOGICAL EXPLANATIONS

Purpose of statistical survey

Collected data on prices of goods and services serve as a basis for calculating consumer price indices and retail price indices, for calculating average national prices and for some other purposes

Coverage

The list of goods and services is composed of 631 representative products, which are according to their characteristics and descriptions divided into four groups: agricultural products, manufactured foodstuffs, manufactured non-food products, and services. Selected are products and services with the biggest shares in total consumption and whose prices best reflect changes of prices of similar articles and the general change of prices.

Method of data collection

Prices are collected by price collectors in Koper, Ljubljana, Maribor and Novo mesto for exactly defined period of time once or twice (agricultural products) a month at about 900 collection points. In each town on average four prices per product or service are collected, which is about 11,000 prices per month.

Comparability of average prices in time

Comparability of goods and services with the same description in time, especially over a longer period, is not complete. Therefore, comparability of average prices in time is also limited.

Definitions

List of goods and services is a detailed list of products, together with their descriptions and units of measure, for which prices are collected.

Collection point can be any place where goods and services are sold to potential customers. It can be a store, a market place, a crafts workshop, a service organisation, etc.

Retail price is the final selling price which customers pay to purchase a product or a service. It includes the prescribed tax as well as all other duties.

Average price of a product or service in the town is calculated with simple arithmetic mean from prices collected for the product or service at the collection point in an individual town.

Average national price of a product or service is calculated with weighted arithmetic mean from average local prices. Weights are sold quantities of products or services in individual towns.
