JOURNEY

THROUGH

THE ASTURIAS.

VIEDO, the capital of the Asturias, I flands near the conflux of two little rivers, which pour their water into the Bay of Bifcay, at Villaviciofa. It was built by Froila, or Fruela, the fon of Alfonso I. furnamed El Catolico, and made the feat of his dominion. This city contains one thoufand five hundred and fixty families, and has five thousand eight hundred and ninetyfive communicants, besides children under ten years of age, who are computed to be about one thousand fix hundred; fo that the whole population being feven thousand four hundred and ninety-five, they are not five to a family. It has four parish churches, eight chapels, fix convents, and a sufficient number of priests, with a bishop, his auxiliary, and thirty-fix canons. The VOL. II. bishopric B

bishopric is worth fixty thousand ducats, and the chapter is reckoned eighty thousand; the former being equal to £.6,591.

15s. 11 \frac{1}{4}d. and the latter £.8,789. 1s. 3d.

per annum.

The family where I took up my abode, was that of the auxiliary bishop. He is more than fix feet two inches high, very stout, remarkably well made, handsome, youthful in his appearance, cheerful, active, and considerably more than threescore years of age. His manner is easy, and his conversation lively. The title given to him is, Most Illustrious; and upon the first approach to him, you bend the knee, and kiss his ring, having previously received his benediction, signified by crossing with his right hand.

His palace is far from elegant, yet by no means uncomfortable. You enter by the coach-house, and from thence pass through a door into the stable, or up the stair-case to the dwelling, which is over these. When ascended, you go through a kind of gallery, or lobby, to the bishop's apartments, confisting of a drawing-room of about thirty by eighteen, a little study, and a corresponding

[3]

fponding bed-room. The dining-room is about twenty-four by twenty-two, and not far from it is the little kitchen, with a few bed-rooms in the intermediate space. The whole has white walls, and ill-jointed floors. The chairs and the long table are of oak.

If the palace itself is plain; the stile of living is still more remarkable for its simplicity: enough for comfort, although little for luxury, and less for oftentation. Our dinner commonly consisted of a sopa, or bread stewed in broth, followed by an olla, composed of beef and mutton, a bit of bacon, and some sausages, with garvanzos, or large Spanish peas (cicer arietinum). At other tables they add veal and sowls. This was succeeded by some kind of roast meat, or game; and fish, in some shape or other, brought up the rear. Every morning and evening, instead of tea, chocolate, with Naples biscuits, was handed round.

The good bishop filled up his mornings with the duties and functions of his office, after dinner he took his siesta, then either rode or walked, and in the evenings conversed with his friends, who assembled round him. His family consisted of his B 2 chaplain,

chaplain, his fecretary, and two pages; besides these, his nephew, who is one of the canons, lived with him, and his great nephew, my travelling companion, was occafionally there. The pages wait at his table, and attend him when he goes from home. The remainder of their time is occupied with studies, and when qualified, they rife into the priesthood, and, admitted to the table, become companions, till a living offers to which the bishop can present them. The padre cura, that is, the rector of S. Andres de Aguera, had been one of these, and whilst I was at Oviedo, an amiable young page was ordained prieft, faid his first mass, and sat down with us at table.

Having been recommended by count Campomanes to the intendant, I fometimes, with the canon, frequented his tertulla, or evening affembly, where I never failed to meet the count de Penalba, a friend of Campomanes. Here I found two apartments, one for cards, the other for converfation, both neat, the former spacious and well proportioned. The company affembled in the card room was numerous; their game was lottery, a game requiring neither judg-

[5]

judgment nor memory; but the room for conversation was deserted. The count indeed was so polite as to quit the card-table; but as I selt that I had no right to expect such a facrifice, I staid only a short time, and then either tormented the bishop, who was no Frenchman, with my miserable Spanish, or, when I thought that I had sufficiently trespassed on his goodness, I retired to my room.

A few days after my arrival, I was prefent at a grand procession of the bishop, with his canons, attended by the principal inhabitants, carrying torches, and preceded by the ashes of Santa Eululia, to implore rain from heaven. But this patroness of the diocese, deaf to their petitions, would not intercede for one refreshing shower, and in consequence the maize was scorched up, and produced but little grain; being at the time in blossom, it required daily showers to prevent the blight.

From the frequency of processions, the consumption of wax becomes considerable in every part of Spain, more especially where the country is not watered, either by rivers or by the noria. But I am inclined

B 3

to think, that the same expence, if properly applied, would in most places secure a never failing supply of water, and pay good interest for the capital employed. Government is sensible of this, and with a view to watering, as well as to navigation, encourages the canals, not as with us, by leaving this most important work to private adventurers, but as a national concern, at the national expence.

After the procession, I went to visit the Hospicio, or general work-house, and found the numbers confined to be, men, fixtyfive; boys, fifty-five; women, ninety; girls, feventy; not including infants out at nurse. The house is large and commodious, confifting of four spacious quadrangles, three stories high, and perfectly well fitted up, with comfortable work-rooms and dormitories; some of these I found two hundred and fifty feet in length, lofty and wide. To fupport this establishment, the funds are thirty thousand ducats annually, arising from licences to fell brandy in the Asturias; three thousand from rents of land; and some other emoluments; being together equal to four thousand pounds sterling, besides the produce of their labour, which is stated at three thousand reales, or thirty pounds per annum, including what they make for their own consumption. Among the two hundred and eighty persons shut up in this hospicio, I saw no cripples, so that their labour may be fairly reckoned at two shillings and three halfpence each per annum. The expence of every pauper to the public is not so easily calculated, because they receive all deserted children. Here the mother has nothing to do but to put the child into the cradle, ring the bell, and then retire.

Besides this refuge for the poor, and for their children, the bishop causes seventy reales to be distributed every morning at his gates, giving either a quarto or an ochavo to all who come, and weekly pensions both to widows and to orphans. In addition to all this, the canons scatter their alms plentifully as they walk the streets; and the fix convents administer bread and broth at noon, more especially the Benedictines, who, as the most wealthy, are most liberal in their donations. When sick, the poor have a commodious hospital always ready to receive them.

B 4 Notwith-

Notwithstanding all that has been done, and what more, in the way of charity, can be devised? beggars, clothed in rags, and covered with vermin, swarm in every street. Is it not therefore evident, that they have done too much, increasing both the numbers and the distresses of the poor by the very means which have been employed to relieve their wants.

What incitement can we here find to industry? for, who will dig a well when he may draw water from the fountain? Is he hungry? the monasteries will feed him. Is he sick? an hospital stands open to receive him. Has he children? he need not labour to support them; they are well provided for without his care. Is he too lazy to go in search of food? he need only retire to the hospicio.

Dry up the fountain, and every man will instantly begin to dig a well; burn the hospicio, or dissipate its funds; give no relief but as a reward, that it may prove a stimulus to industry, and although at first the distress will be increased, and the population will be diminished, yet, as the fruit of that industry, which can spring only from

from diftress, the population will afterwards advance in a constant and regular progression, wealth will be diffused, and diffress will be confined to the cottage of the slothful.

I was exceedingly pleased with the anfwer of the bishop, when I one day took the liberty to ask him, if he did not think he was doing harm by the distribution of alms. "Most undoubtedly," said he; "but "then it is the part of the magistrate to "clear the streets of beggars; it is my "duty to give alms to all that ask."

Among the widows penfioned by the bishop, were many who had lived in affluence whilst they had husbands. These were the widows of lawyers, who are numerous, and spend all their gains.

I went afterwards with don Antonio Durand, and don Francisco Roca, to visit the hospital, of which the former is physician, the latter surgeon. The most remarkable cases were, tertians, dropsies, and a disease peculiar to this province, called Mal de la Rosa.

The tertians were only remarkable, as yielding to the lancet, followed by emetics, cathartics,

cathartics, and the bark. Perhaps the latter were the really efficacious remedies, and all the merit of the former might be merely negative. The dropfies were foon cured by cathartics, and abstinence from drink, allowing no liquid but half a pint of wine in twenty-four hours.

The Mal de Rosa has been considered as a species of the leprosy; but to me it appears to have no affinity with that difeafe. It attacks the back of the hands, the insteps, and the neck, where it descends the sternum, almost to the cartilago ziphoides, but the rest of the body is free. At first it appears red, accompanied with pain and heat, but ends in fourf. In the progress of this difease, vertigo and delirium succeed, with foul tongue, laffitude, chilliness, tears, and, according to the testimony of Dr. Durand, a peculiar propenfity to drown themfelves; it goes away in fummer, and returns in fpring. The disease may be cured by nitre and gentle cathartics; but, if neglected, it terminates in scrophula, marasma, melancholy, and madness.

At Oviedo, as in most of the great towns in Spain, an hospital for the lues is opened three

as the hospital will hold; but the surgeons all over the peninsula complain that patients are tardy in their application. This may arise either from the violence of their treatment, or from the mildness of the symptoms; but whatever cause may be assigned, the consequence is, the universal prevalence of that complaint.

The diseases which seem to be endemical in the Asturias, are, intermittents, drop-sies, hysteria, hypochondriasis, scrophula, bronchocele, glandular obstructions, cachexies, scurvy, leprosy, madness, epilepsy, attended with worms, apoplexy, and palsy, rheumatism, phthisis, and erisipelas, with the mal de rosa, and the saana, or the itch.

For the leprofy they have in the Afturias twenty hospitals, called Lazaros. It appears in various forms: some patients are covered over with a white dry scurf, and look like millers; in others the skin is almost black, very thick, full of wrinkles, unctuous, and covered with a loathsome crust; others have one leg and thigh enormously swelled, and full of varices, pustules,

and

and ulcers, sending forth a most abominable smell. All complain of heat, with most intolerable itching. Some patients, instead of the great leg, have a most enormous swelling of one hand, more especially the female subjects, or else have the features of the face swoln to such a degree, as hardly to retain the human form; others again have carbuncles, big as hazle nuts, all over the surface of their body.

The common itch (scabies) is little less disgusting than the leprosy thus transiently described. It usually attacks the heads of children, and is attended with ulcers of the soulest nature, itching intolerable, and lice innumerable. It is commonly preceded by horripilation and a frebricula, which terminate in the expulsion of numerous little pimples like the small pox; these, in healthy subjects, are large, pointed, red, quickly suppurating; but at the end of nine or ten months they go away. Bad subjects have this disease for life. The semales are more exposed to it than males.

Agues, fevers, and even pleurifies, are faid often to terminate in feabies, and this frequently gives place to them, returning however

however when the fever ceases. In adults it takes possession of the hands and arms, with the legs and thighs, covering them with a filthy crust. In wet weather the itching becomes more troublesome, and towards midnight is insupportable. The patients, who labour under this disease, breed sirones, a kind of vermin exceedingly minute, yet visible without the affistance of a lens, which form channels between the cuticle and the skin.

The predifpoling cause of all these difeases may be sought for in humidity, arising from the peculiar fituation of this province. This hilly country, bounded on the north by the Bay of Biscay, and to the south by fnowy mountains, is always temperate, and generally moift. The N. E. wind indeed is dry, attended with a bright sky, and with a bracing air, but with every other wind the fun is obscured by clouds. The north wind always produces the most dreadful tempests, and the N. W. is little better; both bring rain in fummer, and the west wind comes loaded at all times with moifture from the Atlantic Ocean. In May, June, and July, they feldom fee the fun; but but then, to balance this, in August and September they as seldom see a cloud. The coast is here not only temperate, but most free from rain; but such is the mossture of the hills, that no care is sufficient to preserve their fruits, their grain, their instruments of iron, from mould, from rot, from rust. Both the acetous and the putrid fermentation here make a rapid progress.

Besides the relaxing humidity of the climate, the common food of the inhabitants contributes much to the prevalence of most diseases which infest this principality. They eat little sless, they drink little wine: their usual diet is Indian corn, with beans, peas, chesnuts, apples, pears, melons, and cucumbers; and even their bread, made of Indian corn, has neither barm nor leaven, but is unfermented, and in the state of dough. Their drink is water.

This account, collected from gentlemen of the profession, is confirmed in the valuable work of don Gaspar Cassal, an old physician, of more than common observation and experience, who has given to the public a natural history of the Asturias.

[15]

Although subject to such a variety of endemical diseases, few countries can produce more examples of longevity: many live to the age of a hundred, fome to a hundred and ten, and others much longer. The fame observation may be extended to Gallicia, where, in the parish of S. Juan de Poyo, A. D. 1724, the curate administered the facrament to thirteen persons, whose ages together made one thousand four hundred and ninety-nine, the youngest of these being one hundred and ten, and the oldest one hundred and twenty-feven. But in Villa de Fofinanes, one Juan de Outeyro, a poor labourer, died in the year 1726, aged more than one hundred and forty-fix years.

When we consider the temperature of the climate, arising from its humidity, together with the cooling winds from the Atlantic and the snowy mountains, we must naturally expect to find instances of protracted age, with the prevalence of chronical complaints, such maladies as are seldom mortal. Whereas in warmer and in drier climates, nature comes sooner to maturity,

6

is subject to more acute diseases, and, like combustibles when burning with a vivid flame, is rapidly confumed.

The physician reported a case too fingular to be eafily forgotten: a young man, aged twenty-eight, complaining of a fever, was bled twice without relief; and having fome fymptoms which indicated a different treatment, they gave him a bitter purge, which brought from him, in one day, one hundred and feventy - three large worms, (the teretes). Five days after this he paffed one hundred twenty-four, and the next day feventy-three, and died.

From the general hospital, I went with don Nicolas Trelles to vifit an hospital for pilgrims, of which he is chaplain and confessor. It is a miserable building, with a wretched hall, and numerous cells, by way of bed-rooms. Here pilgrims from every quarter of the globe, who are going to prostrate themselves before the altar of S. Jago, in Gallicia, are received and lodged for three nights. When they arrive in Oviedo, they prefent themselves before one particular altar, and receive every man ten quartos.

[17]

quartos. Should he chance to die here, he is buried with more pomp than the first nobleman of the province, and is attended by all the canons to the grave.

The rage for pilgrimage is much abated; but there are people living, who remember when it was the fashion for all young men of spirit, both in Italy and France, before they married, to go as pilgrims to S. Jago; and even now it is not uncommon to see straggling some few old men, and many companies of young ones, pursuing the same route. We met twelve fine made fellows, who came from Navarre, singing the rosary, and hastening towards the next convent, where they expected to lodge, and receive more money for the journey.

S. Jago, if I am not mistaken, was the first who preached the gospel to the Spaniards; but however this may be, their devotion springs from gratitude; and the reverence of all surrounding nations, who are acquainted with his military same, is the just reward of his undaunted prowess, when, mounted on a white horse, he appeared in the air sighting against the insidels, and putting them to slight before Vol. II.

Ramiro, at the battle of Simancas. (A. D.

927.)

The fight of pilgrims naturally reminded me of relics, and excited a curiofity to vifit those of the cathedral; and for that purpose I made application to the bishop, who the next morning fent his nephew, the canon, to shew me every thing most curious among their treasures. Tradition says, but I do not undertake to vindicate the truth of its report, nor indeed would our good bishop; tradition fays, and our good bishop, with becoming modefty, confiders it as poffible, that when Cofroes, king of Persia, pillaged Jerusalem, God, by his omnipotence, transported a cheft of incorruptible wood, made by the immediate followers of the apostles. and filled with relics, from Jerusalem, by way of Africa, to Carthagena, Seville, and Toledo, and from thence, with the infant don Pelayo, to the facred mountain near to Oviedo, and finally to the cathedral church of San Salvador. Upon its being opened, in the presence of affembled prelates, by the command of the fovereign, Alonzo the Great, were found portions of all the following articles: the Rod of Moses; the Manna

Manna which fell from heaven; the Mantle of Elias; the Bones of the Holy Innocents; the Branch of Olive which Christ bore in his hand when he entered Jerusalem; great part of the true Cross; eight Thorns of his Crown; the Sanctissimo Sudario, or napkin stained with his blood; the Reed, which he bore by way of sceptre; his Garment; his Sepulchre; the Milk of the Blessed Virgin; the Hood, which she gave to S. Ildesonso, archbishop of Toledo; one of the three Crucifixes carved by Nicodemus; and a Cross of the purest gold, made by angels in the cathedral.

"Whosoever, called of God, shall visit these precious relics, shall obtain remission of one-third of the punishment due to his sins, with indulgence for a thous fand and four years, and six quarentines, &c. &c." Thus at least runs the promise, in the name of the pope, and by authority of the bishop; yet I doubt much, if thus worded, the promise be agreeable to the faith of catholics. All their bishops and men of learning, with whom I have

had the honour to converse, have solemnly affured me, that without repentance, and a firm belief in the atonement, no power upon earth can absolve the guilty; and that the church claims no prerogative respecting indulgences, but that of remitting the punishment which would otherwise be endured in purgatory, by those who shall not have performed the penance appointed by the church for each particular offence. When they promife forty days indulgence, or as many forty days as shall make one thousand and four years, they do not mean abfolutely days and years, as if endless duration could be divided into portions, to be measured by the rotation of the earth, for they hold fuccession to be inconsistent with the idea of eternity; but they mean, if I understand them right, the remission of such a portion or quantity of punishment as shall be equal to forty days, or one thousand and four years penance, should their lives be protracted to fuch a period as would allow them to perform the whole. When the points of difference between protestants and papifts shall be fairly and distinctly stated, the

[21]

the subjects of dispute will vanish, or at least they will have the better chance of

coming to agreement.

Some days after I had examined all thefe relics, the Sanctissimo Sudario, or facred napkin, on which the Redeemer, during his passion, impressed his image, was exposed in the cathedral, to eight or ten thousand peafants collected from all the furrounding villages, most of whom had baskets full of cakes and bread, which they elevated as high as possible the instant the curtain was withdrawn, in the full perfuafion that thefe cakes, thus exposed, would acquire virtue to cure or to alleviate all diseases. lifted up their beads, and every one had fomething or other to receive the divine energy, which he conceived to be constantly proceeding from the facred image of his Lord. After a few minutes, one of the canons drew the curtain, and the multitude retired.

The monasteries in Oviedo are not highly interesting; yet two of them excited my curiosity; both of them belonging to the Benedictine order: the first was of monks, whom I visited for the fake of father Feyjoo,

C 3

whofe

whose fame has extended to the most diftant nations. I went into his cell, and conversed with those who had reverenced him living. I examined the features of his bust, but this having been taken when the clay was no longer animated, it was from his works alone that I could form any judgment of his mind. All who are conversant with these, will agree with me in thinking him, for general literature, the first writer of the Spanish nation.

The convent of the Benedictine nuns I visited chiefly on account of their great wealth. They are only fifty, and their revenue is allowed to be twenty thousand ducats, or £.2,197 5s. 34d. a year. They invited us to tea. I went with the canon and my young friend to their parlour; and they affembled with the lady abbefs at the grate. Their conversation was lively, and their behaviour perfectly easy. I ventured to folicit one of them to fing; she was young and handsome, genteel and delicate, and her countenance was highly interesting; but when she began to chaunt a portion of the litany, she made me start; for having long fince forgotten all the fongs of infancy,

infancy, and being accustomed to sing only in the choir, her voice was become harsh and grating on the ear. When we took our leave, they invited us to repeat our visit; but my curiosity was satisfied, and my time was short.

The building itself is worthy of attention for its vast extent, and for its elegance.

The person to whom I was chiefly recommended was the count of Penalba, a man of good abilities, of gentle manners, and of uncommon information, for a no-

bleman of Spain.

200stn

I went with him to fee the hot fprings of Rivera de Abajo, at the distance of some miles from Oviedo. The situation is most enchanting, in a little valley every where shut in by losty mountains, excepting only a small outlet for the stream. The rock is limestone, and the waters resemble those of Bath, both in temperature and in taste. The principal spring rises from the rock, and is near two inches in diameter. The baths are ill contrived, and separated by a cold passage from the dressing rooms.

The virtues of these waters have not been ascertained, nor have they been analised;

but the cases in which they have been chiefly recommended are, rheumatism, palsy, jaundice, and sterility; and for these they are in the highest estimation.

In the centre of the valley, on a little eminence, is a castle with round towers, called San Juan de Priorio; and near to it a church, most romantically placed, with a beautiful back ground of oaks and chefnuts.

As we returned, we visited a new manufacture of petroleum, established near the city, according to a plan fent from Paris by count d'Aranda, and which I understand to be the same with that invented by lord Dundonald. This will certainly become an object of importance, because coal every where abounds in the Asturias, although it has never yet been turned to profit, on account of its abominable fmell, arifing perhaps from the rock, between which it lies, and the fulphur, with which it is impregnated. It is well known that alcali and fulphur form the liver of fulphur, than which nothing is more offensive to the nostrils. Now the whole province abounds with marle, chalk, gypfum, pifolite, or calcareous

careous freestone, limestone, marble; and the rock, which confines the coal, is wholly calcareous. But should they ever penetrate this stratum, and find the coal in schift, I have no doubt that their coal would cease to be offensive. At present they have not sufficient encouragement to work these mines, because the country abounds with wood, and the prejudice against coal is so strong, that men to whom the multitude look up, have not scrupled to attribute all the consumptive diseases of our island to the prevailing use of coal.

The limestone of this province every

where abounds with fosfil shells.

To the west of Oviedo the soil is gypfeous, but they make no saltpetre, nor is there any sign of nitrous earth.

The trees are, elm, ash, poplars, and a species of the oak, called robles, an appellation perhaps derived from robur. In the low lands they get two crops in the year, taking after barley either maize or flax. Their wheat is very fine.

The ploughs about Oviedo are, without exception, the worst I ever saw, and perhaps the worst which the imagination can

conceive,

by itself, with two oxen and one man to work it; this goes first, then follows the plough in the same tract, with no iron excepting at the point of the share. The handle is curved, to serve the purpose of sheets, and has a mortice to receive the tenon of the beam, and itself is morticed into the tail of the share. It has a retch to raise and to depress it. The whole is made in the most clumsy manner, and at best can only scratch the ground, which, being mostly strong land, requires to be well ploughed.

The harrows have no iron, and are only used for maize; the wheat and barley be-

ing always left unharrowed.

The cart wheel has no spokes, but confists of a wooden ring or felloe, composed of four quadrants, and is bisected by a plank of about eight or ten inches wide, to receive the axis, which, being fastened to the wheel, turns round with it, making what is called an axis in peritrocheo. Some of these, for heavy work, are bound with iron, and have spike nails with enormous heads. I had the curiosity to measure the axis, and found

found it commonly more than eight inches diameter, but sometimes ten; yet, I must confess, that I was not surprised at finding this quantity of friction overlooked in the Asturias, having observed so little attention paid to it even in England, where, till within these sew years, the large wooden axis was universal; and where, even in the present day, sew farmers have adopted iron.

To fet any matter in a proper light, it is often necessary to view it in the two oppofite extremes. Now it must be evident. that were it possible to have the axis, of the fame diameter with the circumference of the wheel, the friction would not be in the least abated, but would, as may be proved, and has been proved by the most accurate experiments, be equal to onethird of the whole weight moving on a fmooth furface. Were it possible to reduce the axis to a mathematical line, friction would altogether vanish. Having found the two extremes, the imagination readily seizes a general idea of the proportions which lie between them. Let us however examine these proportions with a more minute nute attention. It is evident, that in the former case, always supposing the plain to be horizontal, a power more than equal to one ton would be necessary to move three tons; whereas in the latter case, a sly would

give motion to ten thousand tons.

Stating the diameter of the wheels to be four feet, and that of the axis to be eight inches, which are the usual dimensions in the Asturias, something more than one ton would move eighteen tons; but, fuppofing the wheels to be five feet high, and the diameter of the axis to be two inches and an half, then fomething more than one ton would fet in motion feventy-two tons, the friction being always directly as the diameter of the axis, and inverfely as the diameter of the wheel. Here I must take occasion to observe, that in point of friction, to diminish the axis will be found more adviseable than to increase the diameter of the wheel, because the friction will be diminished only in the simple proportion of the diameter; whereas, the degree of strength being given, the weight of the wheel will be nearly as the fquare of the diameter. Whilst the motion is horizontal on a plain which which is perfectly hard, wheels which are high, and confequently heavy, will have no other disadvantage than the superior cost, but on foft roads, and in moving either up hill or down, the weight of the wheels must not be overlooked, nor must the diameter be difregarded. The weight in both cases tells against the horse; but, as to the diameter, a distinction must be made. Going up hill, in proportion as you elevate the axis above the horses breast, so as for the line of draft to make an angle with the hill, in the fame proportion you lofe power. The truth of this proposition may be caught by moving in imagination the line of draft up and down in two opposite extremes. Elevate or depress it till it becomes perpendicular; the whole force of the horse will tell for nothing, and he will act only like a log of wood equal to him in weight. Let the line of draft make an angle of 45° with the plain, on which the waggon is afcending, and one half of the force will be loft. In like manner by the composition and resolution of forces, the exact proportion of lossmay be afcertained. In going down hill, the diminution of friction, which is directly

as the diameter of the wheels makes it needful to create new friction by chaining the wheels, or by a fliding piece to prevent their rotation.

In the Asturias, not satisfied with the quantity of friction arising from a wooden axis of eight inches diameter revolving without greafe, they fix two wooden pins. which confine the axis in its place, fo near together, that they bind hard against it; and this they do only for the fake of the noise arising from the friction, and which, whilst it appears to lull the oxen, and to incline both them and the driver to fleep, as they move flowly on, is confidered as exciting them to labour, and thereby precluding the necessity of either speaking to them or pricking them with goads. This mufic, refembling the found of a post-boy's horn, is heard from morning to night in every part of the Asturias, and, when at a great distance, is not unpleasant even to a stranger, but to the native peafant it appears to supply the place of all other, and to be the never-failing fource of calm enjoyment.

In this country oxen supply the place of

horfes,

horses, and consequently beef is cheap, being fold for ten quarts the pound of twentyfour ounces, which is 17 penny for a pound of fixteen ounces; mutton is fourteen quarts for the Asturian pound, or 25 penny for fixteen ounces, including the alcavala, millones, and arbitrio. The bishop tells me, that within his memory provisions were exactly half the present prices. Barley is twenty reales; maize or Indian corn, thirty; French beans, forty; wheat, from forty to fifty the fanega, which in the Afturias differs little, as I apprehend, from one English bushel and an half; wheat therefore is from 5s. 4d. to 6s. 8d. a bushel, or about 6s. on the average.

Monday, August 21, I went with my young friend to pay a visit for a few days to his father at Aviles, on the sea coast, about five leagues from Oviedo.

The occasion of this visit was to be prefent at the feria, or church feast, which in catholic countries all over the world, and even among protestants in a degree, gives occasion to much traffic, and is considered as a licentious season.

The road was over the mountains. This they

they are making at a vast expence, and in a most substantial manner, without the least attention to economy, or to any thing but their own ideas of utility and beauty. For fome miles near to Oviedo, and likewife near to Aviles, the road is made perfectly straight, very wide, and rounded in The foundation is laid with the middle. large masses of limestone rock, covered with stones broken to a smaller size; and, to fupport the arch, which they apprehend would spread like the arches of an edifice, fuppofing them to have no lateral fupport, they absolutely build two walls the whole extent of way. This certainly contributes much to beauty, but not in the least to the principal purpose for which it is designed. The fides of the road being planted with trees, makes it a delightful walk for the inhabitants.

The ambition of Spaniards, in aiming at perfection, is no where more visible than near Aviles. The ancient road turned about two hundred yards, in order to avoid a low and swampy meadow; but now, at a vast expence, they are determined to have a straight and spacious avenue of near three miles,

miles, like those of other cities. From Oviedo to Gijon, a little fea-port to the east of Aviles, they are making another road in the same style, and at similar expence.

Aviles contains eight hundred families, with two parish churches, three convents, and two hospitals, of which one is for old women, the other for pilgrims going to San Jago. They have no manufactures, except of copper and brass pans for the furrounding villages, and of fome thread for their own confumption.

Aviles is fituated on the bank of a little river, about one league from the fea, but within reach of the tide. It is every where furrounded by hills, which, for the most part, are fertile to their fummits, and are either covered with flocks or shaded by the roble and the chefnut; whilft the low lands are loaded with luxuriant crops of wheat and maize.

The house of my young friend is one of the most commodious I have seen. After the fashion of the country, it is built round a court, but with only half the usual corridor; for commonly this runs all round the VOL. II.

court,

court, like that still seen in some of our great old inns. In this house the gallery is wide, and open to the fouth, and to the morning fun. The ground floor is given up wholly to the fervants, except one corner occupied by a chapel. The apartments are, a dining-room, a drawing-room; both spacious and lofty; one to the west, looking to the street, the other to the east, commanding a lovely prospect, which is bounded by the fea; four principal bed-chambers, and others inferior. Of these, two only were fingle bedded, the rest contained, two, three, or upon occasion, four beds; for in Spain, even in respectable families, three or four gentlemen will occasionally occupy one room.

Custom reconciles to this; and, by the practice of Scotland, France, and Spain, I fee clearly that other nations can be reconciled to that which is most disgusting to an Englishman; and certain it is, by what we fee daily in our cottages of the poor peafants, that our olfactory nerves may be reduced to such a degree of torpid insensibility, as to be happy and contented in the midst of filth and nastiness.

In this respect, no nation can surpass the Spaniards; who, without disgust, without regard to decency, when lodging thus together in one room, conceal only by a napkin that which the French shut up in boxes, and hide in the little closet where

they keep their clothes.

Upon occasion of this church feast or feria, which, by the by, marks the origin of our word Fair, the concourse of strangers to Aviles is confiderable, and every gentleman opens his house for the reception of his friends. At this feafon the morning is fpent in lounging about to view the shops, the cattle, and the people affembled in the fair; and the evening is closed by dancing. The balls are given by the principal perfon in the city, and fuch is the fimplicity which reigns in this distant province, that the fervants and peafants are allowed to crowd about the entrance of the room to fee the dance. The most favourite dances are the English, the minuet and the country dance; but fometimes they dance the cotillion, and, towards the close of the evening, the fandango.

Sunday, August 27, being the fourth day
of

of the fair, and remarkably fine, the concourse of people, with the multitude of cattle, was furprifing, and the market was brisk. As protestants, we must be allowed to wonder at this practice. Beef here is fold for feven quarts and an half the pound of twenty-four ounces, and mutton eleven; bread, five quarts for the pound of twenty ounces; wheat, thirty-two reales the fanega, which weighs a quintal, and which, if supposed equal to the quintal of Catalonia, will be ninety-two pounds English; barley and maize, twenty-eight reales; beans, thirty-fix.

It is firiking to observe how corn finds its level all over Europe, whilst butchers meat, which is not of fuch eafy transport, varies exceedingly in price. Thus, at Aviles, beef is under three halfpence; mutton is 2 pence for a pound of fixteen ounces, whilst bread is 1 penny for the same weight.

No distinction in price is made between the prime pieces and the coarfe, nor between fat meat and lean, because the prices are fixed by the magistrate, without respect to quality. The confequence of this ar-

rangement

rangement is, that the meat is never fo good as it might be, were the market free.

The government of this city is in two corregidors, four regidors, and a fyndic, who is annually chosen by the people to inspect the meat, to vindicate their rights, and take care upon all occasions, that justice shall be done to them.

Whilst I continued at Aviles, I discovered, for the first time, that the visit is always to the lady; that the master of the family is perfectly at liberty to come or go; that there is no necessity to take notice of him; and that, if the daughter is handsomer than her mother, she may, without offence, occupy the whole attention. This idea I found afterwards confirmed in the great metropolis, by seeing gentlemen introduced to ladies of the first fashion, and visiting them on the most familiar footing, without the least acquaintance, or even personal knowledge, of their husbands.

The science and practice of medicine are at the lowest ebb in Spain, but more especially in the Asturias. Fiat venesectio is still the favourite prescription, notwithstanding

D 3

the ridicule of Le Sage, and the ferious reafoning of Feyjoo. When the fond husband meets the physician in the street, and urges him to step in to see his wife, Sangrado pulls out at once his lift of patients and his watch, tells him that he can not stop one moment, orders him instantly to fetch the furgeon, and to have her blooded, promifing faithfully to see her in the space of half an hour. Palfies most undoubtedly are frequent, but it is by no means clear, that these are always caused by plethora, although in many cases they certainly originate from fulness. Sangrado however has fuch a dread of palfy, that he bleeds his patient into a dropfy, or leaves him to languish between life and death, a prey to the most gloomy of all diseases to which humanity is subject.

At the request of the bishop, I visited a friend of his, an old canon, who was threatened with a palfy by his physicians. He had been twice blooded, and the question was, whether he should lose more blood. I went to him immediately, and found him surrounded by his friends, who all stood looking on, expecting every moment to see the fatal stroke, whilst he, sitting in his great

great arm chair, apparently in perfect health, yet with a gloomy and dejected countenance, feemed to be waiting for the awful moment, without one ray of hope to cheer his mind. Those of his friends, who could be spared from business, continued with him; his neighbours dropped in to look upon him; but all continued filent, excepting fuch of them as thought it needful to ask him from time to time how he felt. No one entered into conversation with him, nor would they fuffer him to look into a book. Notwithstanding this repeated venefection, his pulse was remarkably full and strong. He was of a certain age, lived well, and took no exercise. I could not hefitate what advice to give. At my request the room was cleared; he adopted the vegetable diet, and took exercise. Thus by degrees his fears were diffipated, and he returned once more to join the little circle of his friends in their innocent amusements.

At the defire of my friend at Aviles, I went to visit a monk, who was related to the family, and found the good old man crying with agony of pain, arifing from the stone. The physician ordered nothing but

D 4

Madame

Madame Stevens Solvent: but this was too flow in its operation, and could give no present ease from pain. I ordered the Enema Moliens, by way of warm fomentation, to be used immediately, and to be repeated, if occasion should require; but the first application gave relief, and all the monks crowded round me to confult, each for himself, what would be proper for his complaint. Among all those who came to me, I did not find one who was not afflicted either with the stone, the gravel, or with the hypochondriacal difease. For this I could affign no other cause, but their inactive life, and the want of animating hope, both common to the cloistered tribe.

From the monks I was fent for to a convent of nuns, where I was confirmed in my idea, that man is formed not only for focial life, for that is found in convents, but for domestic cares. Without a pursuit the mind must languish, and the health will suffer. The two nuns, whose friends had requested my advice, were hectic, and I am satisfied that others who consulted me were running the same course; nature certainly never intended them for nuns. Other considerations

[41]

tions apart, the feverity of their discipline, their rising at midnight from a warm bed to go into a cold chapel, is ill suited to the delicacy of the semale sex, and must be inevitable ruin to the tender constitution.

I was much pleased with the good sense, and slattered by the considence of the lady abbess. When she was describing a diseased breast, and I had said, "If this young "lady were my sister, I should desire to see "the breast;" she answered, "Every lady is sister to the physician who attends "her;" and immediately desired the nun to go with me to a parlour. On examination I sound it was a cancerous case, and recommended them to make application to a surgeon,

After having passed ten days very pleafantly at Aviles, I went with the count Penalba to stay as many at Luanjo, or, as we should pronounce it, Luanco.

Luanjo has three hundred and feventy houses, and one thousand eight hundred fouls, of which one thousand three hundred go to confession and communion, the other five hundred are infants. It is a little sea port, and carries on a coasting trade.

The

The ride from Aviles to Luanjo is chiefly on the sea coast. When we arrived, the sun was fet, and the evening was shut in.

The habitation of the count is massive, chiefly calculated for strength, and to refist the waves, which always wash its folid base, and occasionally breaking against the house, send their foaming spray over the lofty roof into the street. Whilst I was there I was fo fortunate as to be witness to this fight. To enter the dwelling, you pass through the coach-house, and find the ground floor given up to stables.

When we arrived, the great hall was already occupied, as usual, by the neighbours, who were amufing themselves with cards: but, as we were under no obligation to join the party, which was not of the genteelest cast, we went up stairs, and took possession of a room which occasionally

ferves for eating.

The family confifted of the count and countefs, with their children, his two fifters, and her mother. His brother, a genteel young officer, was there upon a vifit. The family being thus numerous, and the greatest portion of the house being occupied pied with offices, little remained for bedrooms. These were sew in number, and
upon a contracted scale. The room, in
which I slept, was about eleven seet by
fourteen, yet contained two beds, one for
me, the other for the brother of the
count. The walls are white limed, the
floors are smoothed with the addice, but
not one is plained, and I do not recollect
one ceiling. The beds have no curtains.
The great hall where we dined is a double
cube of about fifty by five and twenty;
with these dimensions, if well sitted up, it
would be elegant.

The stile of living resembled the old British hospitality; and the long oak table, surrounded by strong oak benches,

was every day well covered.

I was at first surprised, and much disgusted, with a ragged and half naked visitor, who came up at dinner time, walked round the table, spoke freely to all the family, but in a manner to me quite unintelligible, sat down occasionally at the bottom of the table, and sometimes seized a bone, then laughed and chattered like a baboon; yet, with

with all this, appeared to give no offence. Upon enquiry, I found that this miferable object was the idiot of the village; and, as fuch, enjoyed the privilege of going where he pleafed, and of doing what he pleafed, without restraint.

Nothing can exceed their fimplicity of manners in this diftant province. Polished nations would be offended at their freedom, and the plainness with which they speak of things, which in the more advanced state of fociety must not be even hinted at; yet fuch language neither gives difgust, nor tends to excite the passions. But at the fame time familiarities, fuch as in other countries are esteemed innocent, and, being rightly understood, neither imply nor lead to guilt, would here, and all over Spain, be highly offensive; would, if practised in public, excite universal horror, if in private, level every fence which virtue is engaged to maintain.

They use no paint, no powder, no curls, no cap; nothing but a bit of riband bound round the head. In this simplicity of dress, youth and beauty may enjoy their triumph;

but the old women, for want of borrowed charms, have nothing which can please the eye. Yet gentlemen are not altogether void of attention to them, nor are they infensible to these attentions. A tradesman of Luanjo had cut his little portion of tobacco, and had rolled it up carefully in a strip of paper, making a cigar about the fize of a goofe quill; he had doubled back, and pinched carefully the ends, then with mature deliberation, taking up his fteel, his flint, and his little bit of amadou (boletus igniarius) he struck a light, kindled his cigar, began to smoke, and finding it work well, he presented it to the counters. She bowed and took it, fmoked it half out, and restored it to him again.

After the countess had done with the cigar, and had joined the conversation, in a few minutes she opened her mouth, and sent out a cloud of smoke. She saw my surprise, and asked the cause of it. I told her; and immediately the person who was smoking drew in some hearty whists, then opened his mouth to convince me that nothing continued there, and after many minutes he breathed out volumes of smoke.

fmoke. This I find is their common mode of fmoking; and without making it pass through their lungs they think it use-less.

The government of Luanjo is in a corregidor, affifted by eight or ten regidors and two fyndics, who are to protect the people from oppression. These magistrates once a year make a contract with the butcher who will supply the market cheapest. In consequence of this agreement, beef sells for seven quarts; mutton, ten; bread, six per pound of twenty-sour ounces. According to this, supposing the pound to be sixteen ounces, beef will be 1.5 penny; mutton, 1.7; bread, 1.1; per pound.

Labour is from three to five reales a day, or, without fractions, from feven pence to a shilling.

The land in all this province is estimated by the dia de buyes, or quantity which a yoke of oxen is supposed to plough in one day: but this differs in every district. About Oviedo they reckon the dia de buyes at sixty varas by thirty, or eighteen hundred square varas; at Luanjo it is sixtyfour by forty-eight, or three thousand and

fixty-

fixty-two; and about Gijon they call it feventy by thirty-five, or two thousand four hundred and fifty varas square; but in general the dia de buyes may be taken for about half an acre.

Near Luanjo the land produces, of wheat, ten for one upon the feed, and as it pays one fanega, or about ninety-two pound of wheat for every dia de buyes, we may reckon the rent at about fixteen shillings the acre.

After spending a few days at Luanjo, we went to Carrio, another country-house belonging to the count, or rather to the countefs, because in Spain the property of the husband, and of the wife are perfectly distinct. As long as she lives no one can take it from her, and when she dies, it passes to her children; or, supposing it to be entailed, it devolves immediately to her eldest fon, who, at the age of twenty-one, or fooner if he marries, takes possession, even though his father should be living. If the has titles of honour, the carries them with her to her husband, and transmits them to her heir. Upon marriage, the hufband makes a declaration of the effects belonging

belonging severally to himself and to his wife; and her property is fo much vefted in her, that, in case of her husband's bankruptcy, his creditors have no power to touch it; but if at his death it is found that he has prospered in the world, she may claim her proportion of all the favings. The latter provision is unquestionably wife, but it may be imagined that the former must give much scope to fraud, and certainly it does; but then there are not wanting confiderations to make men honest. A tradefman of Oviedo, at marriage, gave in a false specification, with a view to defraud his creditors, should he unfortunately break. The wife died foon after, and her relations claimed all the effects of which he had delivered in his declaration, as her property; and he, who had been well to pass previous to marriage, was left destitute, and could find no redrefs.

Carrio is a commodious habitation, neat and comfortable, but without higher pretenfions, fituated in the midst of a fertile country, near to a little river, and not far distant from the fea. In the domestic chapel, the count tions of the country thewed

fhewed me an altar, which is one folid block of marble, with the following infcription:

Imp. Cæfari Augusto Divi F.
Cos. 13. Imp. 20. Pont. M. 10.
Patr. Patriæ Trib. Pot. 32.
Sacrum.

This block was found at Cape Tauris, near the entrance into Gijon (Jixa of the Romans) and is mentioned, together with two others, discovered near to the same spot, by Mariana and Morales.

From Carrio we rode into Gijon, a confiderable port, to which the English resort for filberts and chesnuts. It contains about eight hundred samilies. This harbour, made and maintained at a vast expence, is not reckoned safe; but there is no other in the vicinity, which can stand in competition with it.

We were entertained with great hospitality by Don Francisco Paular Jove Llanos, a captain in the marine, who is retired from service. An old officer in every country is a pleasant companion, and in no country more so than in Spain. In this gentleman Vol. II.

I found all that a foreigner can wish for, good sense, politeness, and great information.

The next morning, we returned by Carrio to Luanjo; and, in the way, stopped in a beautiful meadow near *Candace*, to partake of a little fête champêtre.

At Peran, in this vicinity, in the limestone rock, I met with a rich variety of extraneous fossils, of corals, corallines, and coralloides, with cockles, exposed by the fretting of the waves; and, upon examination, I traced this stratum running up into the country much above the level of the sea.

During my residence at Luanjo, the count shewed me a royal ordinance, dated 22d October 1785, stating, That the principal cause of the decay in agriculture was the unlimited power of the landlord to eject his tenants at the expiration of their leases; and appointing, that, from henceforth, in the Asturias, the sarmer, provided he cultivated well, and was not considerably behind hand with his payments, should neither be ejected at the expiration of his term, nor have the rent raised; reserving both to

the landlord and the tenant, an appeal to skilful persons, who should regulate the value of the farm, and make compensation to the occupier, on his quitting it, for any improvements made either by himself or by his ancestors. This provision, most undoubtedly, is both wife and just; because it not only stimulates the industry of the farmer, but encourages his parfimony, by shewing him where he can immediately make all his gains productive, and thereby promotes the highest improvement of the foil. But, as for wisdom or justice in the former provision, I must freely confess, I can discover neither. Every thing is worth what it will fetch; and if men, who wish to find employment for their capitals, are willing to advance the rent, why should not the landlord avail himself of this? In most countries, the ruling powers are too bufy, and will be meddling, when things would naturally, and without their interference, much better regulate themselves.

September 11, I returned to Aviles, and the count went to spend a few days at another country-house, whither he pressed me much to bear him company; but I had neither health nor spirits for this excursion.

The refemblance between the Asturias and many parts of England is very striking. The same is the aspect of the country, as to verdure, inclosures, live hedges, hedgerows, and woods; the same mixture of woodlands, arable and rich pasture; the same kind of trees and crops of fruit, and cattle.

Both fuffer by humidity in winter, yet, from the fame fource, find an ample recompense in summer; and both enjoy a temperate climate, yet with this difference, that as to humidity and heat, the scale preponderates on the side of the Asturias. In sheltered spots, and not far distant from the fea, they have olives, vines, and oranges.

The cycler of this country is not so good as ours; but I am not able to determine, whether the fault is wholly in the making, or whether there is not likewise some natural imperfection in the fruit. Certain it is, that they pay little attention to this article, neither suffering the apples to hang the proper time upon the trees, nor select-

ing

ing the best kinds, nor leaving them to fweat, nor picking out bad fruit, nor racking off the cyder when it is fine. The opposite of all this, both as to the liquor and the fruit, is the practice of our best cyder counties. Not contented with racking once, we draw it off three or four times, if needful, always observing to do this when the cyder is become fine. For this purpose, they, who are most curious, will even sit up with it, when the time draws nigh, that they may feize the proper moment. If the Asturians paid attention to this, their cyder would become a confiderable article of export, and, together with their nuts, and other fruits, would bring great wealth into the country.—Yet, with the best information and the most minute attention, it is by no means certain, that they would ever be able to produce a liquor equal in strength to that of our best counties, because of the prevailing humidity; on account of which, every thing this principality produces is inferior in its quality to the productions of a warmer climate. The herbs here dry away to nothing; and the wood burnt upon the hearth, makes little or no ashes, yet produces E 3

duces fo much foot, that the chimneys are perpetually choked. Such is the humidity of this province, that the misletoe grows not only on the oak, but on apples, pears, and thorns.

All the way from Aviles to Oviedo, we found the harvest over, and the people, men, women, and children, in the field threshing out the grain with sails; because, in this moist and temperate province, they cannot use the trillo.

Their flail is very heavy, and extravagantly long, not less than five feet in common, and the handstaff is nearly of the same length. In consequence of this, the motion of the flail is flow, and the exertions of the thresher turn to little account. To understand this subject, we must recollect the laws of motion. Now, when quick motion is communicated to the grain, whilft the straw remains unmoved, or when the straw receives the stroke, whilst the grain continues in a state of rest, a separation is the consequence. When either moves flowly, the other follows, and no separation is effected; but the greater the velocity of either, the more certain and speedy is the **feparation**

feparation of the grain. The fame effect will follow, supposing the straw and grain to be moved with different velocities, in proportion to that difference. We must always remember, that the weight of impinging bodies being given, the magnitude of the stroke is directly as the velocity. This principle rightly understood and applied, would not only long since have banished heavy stails for threshing the lighter grains, but would, from the beginning, have led to the machine for coining now recently introduced at Birmingham.

Threshing is by no people better understood than by the Wiltshire peasants, who for wheat prefer a stail of three feet, weighing about twenty-four ounces, with a handstaff of the same length.

In the Asturias, they depend upon the wind for winnowing, and have no idea of a machine for performing that operation in a barn. Were they to see the fan, formed after the model of a machine, first invented by Reiselius of Wurtemberg, called rotatilis suctor et pressor, but discovered by Dr. Papin, and from Holland introduced into this island, it is to be hoped, that, without either prejudice

judice or fcruples, they would immediately adopt it; and that no fanatic priest, as in North Britain, would condemn the use of it as impious, under the idea of not depending upon providence for a favourable breeze.

When I returned to Oviedo, a gentleman gave me a collection of amber and of jet, of which there is great abundance in this province; but the two most considerable mines of it are in the territory of Beloncia, one in a valley called Las Guerrias, the other on the fide of a high mountain in the village of Arenas, in the parish of Val de Soto. The former is found in flate, and looks like wood; but when broke, the nodules discover a white crust, inclosing vellow amber, bright and transparent. Jet, and a species of kennel coal, abounding with marcafites, univerfally accompany the amber. The natural history of this curious fubstance is so little understood, that every fact relating to it should be treasured up., Till of late years, it was found only on the fea-shore, cast up by the waves; but even then the various infects inclosed in it, fuch as ants and flies, proved it to be a production

of the land. But now we find it fossil, and hence trace a connection between bitumens and resins. We see it likewise as one link in a vast chain, the origin of which all philosophers are labouring to discover. We find it in a country, where the inclosing strata, and all the surrounding rocks, charged with marine shells and plants, shew clearly, that both it and they are the deposit of the ocean.—This subject will be frequently resumed, and, from its vast importance, merits the most minute attention.

When every one began to talk of winter, I thought it expedient to prepare for my return towards the fouth, before the mountains should be covered by the snow, which usually falls at the beginning of November, and sometimes even in the middle of October. I was not indeed in a condition to undertake the journey; but the fear of being shut up in the Asturias, till the return of spring, prevailed over all other considerations, and made me resolve to venture.

As the account of my indisposition may ferve towards the natural history of the country, I shall briefly give it. The 21st of August, riding from Oviedo to Aviles,

on a rainy day, I was wet through; and at the end of our journey, as I had nothing at hand to change, I fuffered my clothes to dry upon my back. I had, however, no reason to think that I had taken cold. till I perceived that I was gradually lofing the use of all my limbs, without either pain or fever. The physician, at the end of one month, confined me to my bed, and forbade me the use of wine, allowing me only water and vegetables, till he had reduced me to the lowest state of debility. I submitted; but, feeling evidently that I was going fast from bad to worse, I took my leave of him. and, by the use of the bark, with a generous diet, I regained some degree of strength, and, getting myself placed upon a mule, I ventured to fet forwards on my way towards the fouth.

The bishop and his family expressed their concern at my departure; yet, considering the humidity of their climate, and the near approach of winter, they were kind enough to consent that I should undertake the journey, in hope that a warmer and a drier air might restore my health.

JOURNEY

FROM THE

ASTURIAS TO THE ESCURIAL,

OCTOBER 2, I left Oviedo, and paffing through feveral little villages, came to *Mieres* in the middle of the day. At night I found a comfortable bed at *Campomanes*, having travelled ten leagues and an half over delightful hills, all either covered thick with wood, or highly cultivated.

In both these places I was much surprised at the moderation of their charges. At Mieres, for a dish of eggs, for dressing my fowl, and for the ruido de la casa, that is, for the noise of the house, or rather for attendance, the good woman required only a real, or something more than two pence farthing. At Campomanes, for the same and for my bed, the demand was two reales.

As we approached the confines of the principality, the scene greatly changed; for, instead of foft and swelling hills, covered with grafs or clothed with woods; fcarcely any thing was to be feen but stupendous rocks of limestone, some in long ridges rising perpendicular to the height of two or three hundred feet, others cragged and broken into a thousand forms. In this route, the way winds chiefly by the fide of little rivers, brooks, or torrents, till it has paffed the fummit of that vast chain of mountains. which separates the Asturias from the Old Castille: yet in the midst of these stupendous mountains, a few rich vallies intervene, each with its little village, in fize proportioned to the extent of land fusceptible of cultivation.

In the ravins through which we passed, I observed that all the mills have horizontal water wheels. These grind the corn very slowly, being fed by single grains; but then to compensate for this defect, they place many near together, and the same little stream having communicated motion to one wheel, passes in succession to the rest. These are well suited to a country abounding

abounding with stone for building, where water runs with rapidity down a steep descent, and where dispatch is not required.

October 4, as we descended towards Leon, we overtook a Merino flock, belonging to the monastery of Guadalupe, in Estramadura. These monks have sufficient land near home to keep their flock during the winter months; but in the summer, when their own mountains are scorched, they send their sheep into the north, where, having no lands, they are obliged to pay for pasturage. They were on their return towards the south.

The great lords, and the religious houses, to whom belong these trashumantes, or travelling slocks, have peculiar privileges secured to them by a special code, called laws of the Mesta; privileges, by many considered as inconsistent with the general good.

This institution has been traced back to the year 1350, when the plague, which ravaged Europe for several years, had desolated Spain, leaving only one-third of its former inhabitants to cultivate the soil.

vigo

But perhaps we ought to look for its origin in more remote and distant ages, when the whole country was occupied by shepherd nations, and when agriculture was but little known. These certainly were the first inhabitants, or if not the first, at least, as the votaries of Pan, that venerable protector of the fleecy tribe, they may claim precedency before the more modern worshippers of Ceres. Occupying the hills with their numerous flocks and herds, it was natural for them in winter to quit a country then covered deep with fnow, and to feek the more temperate regions of the fouth; till thefe, burnt up by the returning fun, refused them pasture, and drove them back again to the mountains of the north, which, during the fummer months, are covered with perpetual verdure by the gradual melting of the fnow.

The numbers of the Merino sheep are continually varying. Cajaleruela, who wrote A. D. 1627, complained that they were reduced from seven millions to two millions and an half. Ustariz reckoned in his time four millions; but now they are near five. The proprietors are numerous, some having

only three or four thousand, while others have ten times that number. The Duke of Infantado has forty thousand. Each proprietor has a mayoral or chief shepherd, to whom he allows annually one hundred doblons, or £.75, and a horse; and for every slock of two hundred sheep, a separate shepherd, who is paid according to his merit, from eight shillings a month to thirty, besides two pounds of bread a day for himself, and as much for his dog, with the privilege of keeping a few goats on his own account.

The produce of wool is reckoned to be about five pounds from every ewe, and eight from the wethers; and to shear eight of the former, or five of the latter, is reckoned a good day's work. Some, indeed, allow twelve sheep to every shearer; but even this comes short of what we do in England, where a common hand will dispatch fixty in a day, and a good workman has been known to finish half as many more.

The wool of the Merino sheep is worth little less than twelve pence a pound, whilst that of the stationary slocks sells for only six pence; and every sheep is reckoned to

yield a clear profit of ten pence to the proprietor, after all expences are discharged.

When the sheep are travelling, they may feed freely on all the wastes and commons; but, in paffing through a cultivated country, they must be confined within their proper limits in a way which is ninety varas wide. Hence it comes to pass, that, in fuch inhospitable districts, they are made to travel at the rate of fix or feven leagues a day; but where pasture is to be had, they are fuffered to move very flow. When they are to remove, either in the fpring or autumn, if the lord has no lands, where his flocks are to be stationed, the chief shepherd goes before, and engages agiftment, either of those proprietors who have more than fufficient for themselves, or of the corporations, who, in Spain, have usually extensive wastes and commons round their cities.

It is to these claims of the Merino flock that fome political writers have attributed the want of cultivation in the interior provinces of Spain.

On descending once more into the plains

of Old Castille, an observation, confirmed by all with whom I had any communication on the subject, occurred to me, that the wine on the south side of the mountains, being transported to the north, improves greatly in its slavour, precisely as other wines improve by being removed to warmer climates.

At the end of three days, when I arrived at Leon, I was fo well fatisfied with the attention of my guide, that we made a fresh agreement, and he accompanied me to Salamanca. For himself, and for his mule, I was to allow him a hard dollar, or about four shillings a day, both in going and returning, he being to pay all his own expences on the road, which, for a stranger, is the best plan, although the natives find it more advantageous to maintain their guides.

Having settled all preliminaries, and made provision for the journey, on the 6th of October, we turned our backs on Leon; and, being by this time tolerably acquainted with each others dialect, we began a conversation by the way. The honest fellow, taking a hearty swig at the borracho, or leathern bottle, which contained our wine,

broke the filence, by telling me, that this was the skin of his most favourite cat; and then, continuing his discourse, gave me the history, both of the cat and of the countries through which he had travelled with her spoil.—This was to him, in all his journeys, a constant companion, a never-failing source of consolation; and he appeared to be as fond of her now dead, as it was possible for him to have been whilst she was sensible of his caresses. The skin contained about a gallon, and usually served us, when filled, for more than half a day.

The way was over an extensive plain of fand and gravel, evidently brought from distant hills, all smooth, and rounded by the action of water. The crops are chiefly rye, with some wheat and barley. The trees are the ilex, the poplar, and the elm.

I was struck with the construction of their ploughs, not merely as having neither sheet, coulter, mould-board, fin (for to this defect I was become familiar), but as having the share morticed into the curved beam at least three inches above its heel, creating thereby a degree of friction, which must greatly increase the labour of the oxen.

Women

Women hold the plough. The cart-wheels are of plank, fixed upon the axis, like those in the Asturias, only they are better made.

The numerous villages contain from fifty to five or fix hundred mud-wall cottages, but feem in general to be going to decay. The inns are more wretched than those of the Asturias, and are thought to be considerable, if they make up more than one bed.

At Toral, where we flept the first night from Leon, as foon as we arrived, I furveyed the premises, and made out my inventory of the furniture; finding in the chamber (for they had only one) two beds, two broken benches, one crippled table, and a little lamp dripping its oil, and fmoking in the middle of the room. This circumstance is not uncommon, because they have no candles, and their lamps are of the most rude construction. I was, however, too much of a traveller to feel difgust, and was preparing to fettle myfelf comfortably, when an old canon of Oviedo, with two school-boys, and a young friar, entering, told me, that they had bespoken this room fome days before. I bowed submission, but F 2 Ropped stopped one moment to enquire the age of this young friar. He informed me, that he was now in his feventeenth year; and that, two years before, at Aviles, in the Asturias, having accomplished his noviciate, he had bound himself by the irrevocable vows.

When I had retired, my faithful guide informed me, that he had procured a bed for me at the house of the curate, who was a friend of his, whither he instantly conducted me. Here I met with such a reception, that I had no reason to lament my disappointment at the posada.

The next morning we arrived at Benavente, and in the way had occasion to obferve a change of dress. In this respect, every province has something peculiar to itself. The peasants, who attracted my attention, were from Astorga. They had round hats, leather jackets without sleeves, and trowfers somewhat resembling those of Dutchmen, perfectly corresponding with what were formerly worn by the Brachati.

Benavente is at present remarkable only for the palace of the dutchess, a vast and shapeless pile, possessing the marks of great antiquity, antiquity, and commanding a most extenfive property. This city seems to be going to decay, yet includes six convents. It is divided into nine parishes, and reckons two thousand two hundred and thirty-four souls.

Bread is here three quarts, or \$\frac{2}{3}\$ penny a pound of fixteen ounces; beef is feven quarts, or a fmall fraction under two pence; and mutton is two pence farthing a pound. The best wine is about five pence a gallon. These are the stated prices, when beef and mutton are to be had; but my guide having neglected to make provision for himself, must have been contented to pick the bones of my miserable fowl, had it not been for the bounty of a traveller who had more than he could eat.

The road from Leon to Zamora is about eighteen Spanish leagues, all the way near the Esla, a little river whose water runs into the Duero below Zamora. From this circumstance the way is mostly level; the soil, to a great depth, is either granite sand, or clay of a weak contexture; and the villages are composed of mud-wall cottages.

At Santa Ovena, having the curiofity to F 3 measure

measure the room, which, like most in Spain, served the double purpose of bed-chamber and parlour, I found it to be twelve feet by ten; yet, in these contracted limits were contained, a bed, the tressels for another, a chair, a table, with two large chests for the king's tobacco, for barley, linen, and all the treasures of the samily. The kitchen is nearly of the same dimensions: yet in this posada I counted thirty-five horses, mules, and asses, with their riders and drivers, who all found lodging for the night.

Whilst I was at supper, an old beggar entered; when I had given him bread he kissed it, bowed his head, and left the room. Struck with his behaviour, I sollowed him instantly, and gave him money; he bowed, kissed it in silence, and left the inn.

Zamora, a city of great antiquity, is at present reduced very low, but formerly it must have been considerable, and will, I have no doubt, soon regain its consequence. Situated in a fertile country, on the confines of Portugal, watered by the Duero, and near the conflux of the Esla, it must always have invited plenty, and when the communi-

communication shall be opened by the canal, for the transport of its productions, it will daily grow in wealth. The extent of its fortifications, twenty-three parish churches, and fixteen convents, inclosed within the walls; in some measure serve to shew what it was; and the recent decorations of the cathedral give a good specimen of what it may hereafter be. This building is old, but the altar is modern, and is much to be admired for the variety of its marbles, chiefly from the Afturias, for the elegance of its composition, and for the beauty of its hangings, which are made of crimfon velvet, richly embroidered with gold.

The chief manufactures are, of hats, ferges, coarse cloth, and nitre; but for the latter the climate is by no means favourable.

Beef is cheaper than at Benevente, being here only fix quarts, or fomething more than three halfpence a pound; but pork is

nearly three times as much.

From Zamora we travelled only three leagues, and rested for the night at Corrales, a village of three hundred and fixty cottages. It was not till next morning that I fully

F 4

fully comprehended for what reason we had made so short a journey the preceding day; but, upon our entering an extensive forest, my provident conductor told me, that he always chose to meet the morning, rather than to be overtaken by the night, whenever he was to pass through a forest, and that, by such precautions, he had frequently escaped unmolested where others had been robbed.

From Corrales we ascended gently for three leagues, and then descending as many, at the end of feven hours we reached Calzada de Valdeunciel, having travelled for at least five hours through a forest, in which, as we proceeded, my guide told me the names of the eminences to be paffed, all distinguished by one generic term Confesfionarios; implying, that on these the traveller would stand in need of a confessor to prepare him for his fate. Confidering the vast extent of this forest, and its vicinity to Portugal, no fituation can be more favourable to robbers, or to the fmuggler who, when he has been plundered himself. is apt to plunder others.

The foil here is most evidently decom-

[73]

posed granite, with its quartz, feld spat, and mica. The trees are chiefly ilex, roble, and the cork tree.

All the way from Leon to Salamanca, for three and thirty leagues, or about one hundred and fifty miles, the country is so flat and open, that the Moorish horse, when they invaded Spain, must have met with nothing to impede their progress; because, in such extensive plains, an oppressed people, dispirited and disarmed, could have little inclination to make resistance; and had it not been for a more hardy race inhabiting the mountains of the north, the whole peninsula might at this moment have been numbered among the followers of Mahomet.

When I directed my course towards Salamanca, it was with a view of paying a visit, by appointment, to the marquis of Oviedo; but, unfortunately for me, on my arrival, I found that he was detained by illness at Madrid. This disappointment was the more vexatious, because I had no letters, nor any prospect of being introduced. I ventured, however, to present myself to Dr. Curtis, president of the Irish college, who

who received me with politeness, took me under his protection, and, during my ten days abode at Salamanca, considered me as

part of his family.

His fituation is respectable, and the convent, part of which he occupies, is one of the best in Spain. It was built A. D. 1614, by the jesuits, but, upon their expulsion, being found much too extensive for any one society, it was divided; the south side being given to the Irish, and the north to the bishop of the diocese for his students.

The wing, in the occupation of the former, is three stories high, and more than two hundred feet long. In the middle of each, through the whole extent, there runs a wide gallery to form a communication between a double range of bed-rooms. These long galleries having no light excepting at the ends, are well adapted to the climate: for even at noon, and during the most dissolving heats of summer, they afford a cool retreat. The whole building is covered with a terrace walk, commanding all the country; and here the young men take the air.

The wing devoted to the bishop's col-

lege is nearly fimilar to this, with the addition of a cloiffer, and an elegant apartment of fixty feet by thirty, defigned for conference and disputations.

The church is in common to both establishments, and is built upon such a plan as must do credit to the taste as well as to the wealth of the disgraced community.

In the Irish college, threescore students are received at a time, and when these are fent back to Ireland, the fame number from thence are admitted, to be like them trained up for the ministry. Their course of education requires eight years. They are expected to come well founded in the languages; and of the time allotted to them in Spain, four years are given up to the fludy of philosophy, the remainder to divinity. The fystem of philosophy includes logic, metaphyfics, mathematics, phyfic, and ethics: for these they read Jacquier; and for theology they follow P. Collet. They rife every morning at half past four, and have no vacations.

The mode of giving lectures is perhaps peculiar to themselves, but worthy to be followed in our universities. The students

have questions proposed for their discussion twice every day, and on these they are informed what books to read; then, supposing the subject to admit of a dispute, it is carried on by two of them under the direction of a moderator, who gives affistance when it is wanted, and guides them to the truth. Where this mode of proceeding is not admissible, the tutors, instead of giving formal lectures, employ themselves in the examination of their pupils, and the business of instruction is thus greatly expedited.

Doctor Curtis lives with his pupils like a father with his children; and, although in a ftate of banishment, seems happy in the discharge of his important functions. It is, however, much to be lamented, that he and they should be reduced to the necessity of seeking that protection in a foreign and distant country, to which they are entitled in their own. This kind of persecution is neither just nor politic. It is certain that ignorance and bigotry have a strong connection. Would you overcome inveterate prejudices, and are you anxious to banish superstition? let in the light. Would you conciliate the affections

affections of those who differ from you in their religious creed? no longer persecute; embrace them, and from enemies they will become your friends; let in the light, and difference of opinion dies away. Catholies, in the more enlightened countries, are no longer papists; their whole system is going to decay; and, without claiming more than common sagacity, we may venture to foretel, that in proportion as the limits of toleration shall be extended, all that cannot bear the light will gradually vanish, till the distinction between catholics and protestants shall cease.

To hasten this event, the education of catholics in Ireland, for the purpose of the ministry, should not only be connived at, but should meet with all possible encouragement.

The university of Salamanca was founded in the year 1200, by Alfonso IX, king of Leon, and regulated by Alfonso, surnamed the Wise, (A. D. 1254) under whose protection flourished the greatest astronomers of Europe. This seminary soon rose into importance, and became eminent in Europe by acquaintance with the Arabian authors.

thors, and, through them, with the Greek. Its professors translated Avicena, who took the lead in medicine, and Averroes, who had bestowed much time in studying Ariftotle; but not fatisfied with copying from the Arabs, they laboured much themselves, and became justly famous in their day for their knowledge in jurifprudence, and for their progress in all the sciences then cultivated in Europe. The reverence of the first professors of this university for Aristotle and for Thomas Aquinas, continues to the present day. The court indeed has long declared war against them both, and repeatedly commanded that they should be abandoned; but, not having adopted fuch methods as are practicable, to fecure obedience, the old profesfors walk in the same path in which their fathers walked before them.

We are not however to imagine that Salamanca produces no men of liberal ideas; far be it from us to entertain fuch a thought; because we know that even in the darkest ages, some men of science were hid in convents, who, had they lived in more favourable times, would have diffused light,

and have been admired in the world. One fuch, and I doubt not there may be many, I met with in D. Joseph Diaz, a father of the Augustines; who, for learning, good sense, and liberality of sentiment, would be an ornament to any country.

The students were formerly reckoned about fixteen thousand, but they are now much reduced; and, in 1785, the number matriculated was nineteen hundred and nine.

The library is fpacious, and tolerably well furnished with modern books; yet the bulk is trash, consisting principally of scholastic divinity.

Of all the public edifices, the cathedral is the most worthy of attention. The soundation of this ancient structure was laid A. D. 1513, but it was not finished till 1734. It is three hundred and seventy-eight feet long, one hundred and eighty-one wide in the clear, one hundred and thirty high in the nave, and eighty in the ailes. The whole is beautiful, but the most striking part of this church, and of many public buildings in this city, is the sculpture, which merits admiration, not only for

the taste therein displayed, but for its excellent preservation. Over the principal door is represented, in bold relief, the adoration of the sages; and over another, the public entrance of Christ into Jerusalem; all appearing as fresh and sharp as if they

were but recently put up.

The church of the Dominicans comes little short of the cathedral in point of sculpture. It has a representation of St. Stephen stoned, with a crucifix above it. all as large as life, and not apparently injured by the weather. Indeed in both these edifices the carvings are in fome measure protected, not from a driving rain, but from its perpendicular descent, because they fink back as much as the thickness of the wall will permit, which is at least fix feet, and are furrounded by mouldings projecting confiderably beyond the wall. The precaution, without doubt, was prudent; vet I was not a little struck when I observed the ornaments of bass-relief preserving their sharpest angles, even when exposed to the full force of the destructive elements. This circumstance may be readily accounted for, when we consider that the stone is a grit, which

which when first taken from the quarry, is soft; but, upon being exposed to the air, acquires hardness. Hence it is peculiarly valuable both to the architect and the sculptor; and to these properties we may attribute the beautiful monuments of art which abound in Salamanca.

It would be tedious to describe the convents and public seminaries of this once famous city; yet, to pass them all in silence, would be inexcusable. I therefore briefly mention such as are most worthy of attention.

Among these may certainly be reckoned the old college: here the quadrangle is small, yet elegant; and the cloister, with its four and twenty columns, one of the prettiest in Salamanca: the apartments are commodious, and those of the regent are in a superior stile.

The college of the archbishop is built upon a larger scale, more light and airy, and having four galleries of one hundred and thirty feet, with two and thirty columns supported by as many, which form the cloister, it may be called magnificent. The date of this building is 1550.

Vol. II. G Cuenca

Cuenca college is remarkable at present for its neatness and simplicity; but the portico, when finished, will place it among the most elegant buildings of this city.

The college of Oviedo, with the churches of the Augustinos Calzados and of the Car-

melitas Descalzos, deserve attention.

Of all these colleges and convents, it were endless to enumerate the treasures and rich jewels defigned for the fervice of the altar. Whatever is most valuable, the produce of Europe, Afia, Africa, and America, is here collected; and the best workmen, in every country, have exerted all their tafte and skill, each in his several branch, to shew the perfection of his art. The ornaments and dresses of the priests are both rich and beautiful; but the most costly piece of furniture, in most convents, is the Custodia. that is, the depository of the host, or, according to the ideas of a catholic, the throne of the Most High, when, upon solemn festivals, he appears to command the adoration of mankind. It is not uncommon to expend fix thousand ounces of filver upon one of these, besides gold and precious stones; yet, in most of them, the workworkmanship surpasses the value of the materials.

The great square, although last mentioned, is not least worthy of attention. I had almost hourly occasion to pass through it, and never saw it without pleasure. It is spacious, regular, built upon arches, and surrounded with piazzas. Such a square would be admired even in London, or in Paris; but in a city like Salamanca, where all the streets are narrow, it gives peculiar expansion to the lungs, when you find yourself at liberty to breathe, when light bursts upon you by surprise, and when symmetry unites with greatness in all the objects by which you are encompassed.

The portico is not more to be admired for its beauty in the day, than for the protection it affords by night; because in this city they have an execrable custom, both offensive to the nostrils, and destructive of good clothes, similar to that for which the inhabitants of the Old Town in Edinburgh have been deservedly reproached.

In the year 1030, there was not a fingle convent in Salamanca; and in 1480 they had only fix for men, and three for women; but now there are thirty-nine. In 1518,

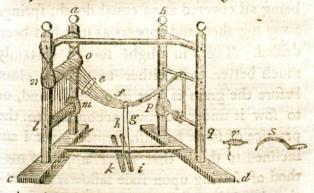

they counted eleven thousand virgins; at present the persons under vows are happily reduced to one thousand five hundred and nineteen.

The houses are no more than three thoufand, yet they have twenty-seven parish a churches, with fifteen chapels, and the clergy are, of those that are parochial, three hundred and ninety-nine; of the cathedral, one hundred thirty-two; besides the royal clergy of S. Mark, forty-nine; amounting in the whole to sive hundred and eighty.

In a city where the convents and clergy are so numerous, it may be well expected that beggars will abound, and agreeably to this idea it is feen, that by the ample provision here made for laziness, every street fwarms with vagabonds, not merely with those who are proper objects of compasfion, but with wretches, who, if compelled to work, would be found abundantly able to maintain themselves. There is indeed an hospicio, or general work-house, for their reception; but as the funds are limited, and do not amount to fixteen hundred pounds a year, it can support only four hundred and fifty paupers. Should, however, the government be inclined to increase

difference, because the numbers both in the work-house and the streets will always bear proportion to the food distributed. This truth can scarcely be inculcated too often; but I shall defer my observations upon it, till I come to treat of Cadiz.

Among the various implements in this hospicio, I was much pleased with one for weaving tape, both cheap and simple in its construction, and so expeditious in its work, that a little child weaves near fifty yards, and a woman more than one hundred and twenty, in a day. I shall describe it by the assistance of a drawing.

a. b. c. d. Is the frame,

e. f. The warp, or chain.

g. b. The two harnesses.

i. k. Treadles to work the harnefs,

to wind the warp.

n. o. The lantern to firain the warp.

p. q. The roller and ratchetwheel to wind the tape.

m. The roller and ratchet r. The bobbin. s. The flaie.

The bobbin is worked by the left hand alone, the fingers being kept under the chain, and the thumb above it. The slaie is held in the right hand to beat up the work.

I was much pleased with the husbandry in the vicinity of this city, as being fuited to the foil. The plough has neither coulter, fin, nor mould-board; but near the tail of the share it has two pins, so disposed as to lay the furrow in high rafters or ridges, like the roof of a house. In this condition the land is left till feed time, when the ploughman first fows the grain, then flits the furrow; and thus the feed, being all covered at an equal depth, fprings away together, and appears as if it had been drilled. This, in a light foil, is certainly much better than either to plough clean before the grain is put into the ground, or to fow it under furrow, according to the practice of some English farmers; yet I am inclined to think that the Hampshire method of fowing upon stale fallows, and letting in the feed by drags, would be found more profitable.

It is well known, that by this modern improvement, the value of land has been more

more than doubled upon all the Hampshire hills. When they were accustomed to plough often for their wheat, as in the low countries, and upon strong land, it has frequently happened, that after fowing four bushels to an acre, they have reaped only eight, and fometimes not more than half as much. But now, by fuffering the land to fettle, by fcattering their feed upon the ground, when the whole perhaps is covered with thiftles, and by passing their heavy drags twice over the field, moving each time the length-way of the furrow, they make a faving on the quantity of feed, and more than double the produce they were accuftomed to receive. By improving on this practice, that is, by pushing the principle fo far as to fold his sheep upon the land as fast as he had sown it, a judicious farmer, who lives at Cholterton in Wiltshire, a few years fince reaped forty bushels from an acre, on land which, with different management, would probably never have yielded back the feed he fowed.

When I express myself satisfied with the husbandry in the neighbourhood of Salamanca, it is only so far as it relates to G 4 ploughing;

ploughing; for, in no other respect has it any claim to approbation. The ploughman and the grazier, instead of being united in the same person, are here eternally at variance; and as the latter is the best tenant, the great proprietors give him the preference. Hence the country has been depopulated, and the lands, which are in tillage, for want of cattle to manure and tread them, produce light crops of corn. This bishopric formerly contained feven hundred and fortyeight corporation towns; but now it has only three hundred and thirty-three, the other four hundred and fifteen being deferted, and their arable lands reduced to pasture. To such an extent is the depopulation spread, that, in a space of seven leagues in length, and five in breadth, which formerly contained one hundred and twentyfeven towns, each with its corregidor and council, only thirteen remain. These have forty-seven churches.

The foil, I have faid, is light. It is a fand, and evidently a decomposed granite, because, upon examination, it is seen to be plentifully charged with a fine white mica. The rock is chiefly granite, covered in some

places

places with schist, but in others with filicious grit, which, as it appears to me, is nothing but the fine fand or broken quarts of the granite, united by a cement.

All men are fond of fystem: they affemble facts, and are never happier than when from these they can deduce some general conclusion. The facts I wish to have recorded, are fuch as may trace out the origin of grit; and I am at present much inclined to think, that hereafter it will be given to the granite. The connection, as it relates to vicinity, stands confessed, and may be fo far ufeful in making out the hiftory of that great revolution which once happened to our earth; but, from my own observations, I am ready to infer a more intimate connection, and that they stand related to each other as effect and cause, or as the parent and his offspring.

I have already fuggested this idea, and have ventured to draw one conclusion from it in respect to Monjouy, near Barcelona. If well founded, this will affift us to account for the aftonishing number of large grit stones, or grey whethers, as they are called, on the Wiltshire Downs, and will

confirm

confirm the diluvian fystem first suggested by Mr. King, in the Philosophical Transactions of 1767. I must, however, reserve what I have to say upon this subject, till I come to the description of the Alps, on my return from Spain.

The government of the city is in a corregidor, one alcalde mayor, and forty-eight

regidores.

When I had fatisfied my curiofity at Salamanca, and found my strength so far restored that I could with safety prosecute my journey, I made an agreement with a Mozo del Camino, for himself and mule, to go with me to the Escurial, not by the direct road, but by a small detour, in order to see, at Piedrahita, a samous country-seat built by the Duke of Alba. The next day, after dinner, October 22, I took leave of Dr. Curtis with a cordial regret at parting, and set forward on my way, proceeding towards Alba.

For the first two leagues we ascended gradually; then entered a forest of ilex, which, as my guide informed me, stretches east and west near forty leagues. The acorns here are of the kind described by Horace, as the origin of war among the rude inhabitants of an infant world, "glandem "atque cubilia propter." Not auftere, like those of the oak, or of the common ilex, but sweet and palatable, like the chefnut, they are food, not merely for the swine, but for the peasants, and yield considerable profit. Beyond the limits of this forest, we began to descend through a fine cultivated country, abounding with corn and wine; and, at the distance of four short leagues from Salamanca, we reached Alba.

This city contains at prefent only three hundred houses, and has seven convents. One of them, that of the Carmelites, merits attention for its pictures, and for its treafures; but the greatest curiosity is the castle, with its round tower, supported by four square ones, in which is deposited the armour of all the dukes of Alba. To this ancient edifice they have added, at successive periods, more modern habitations, forming a considerable quadrangle; but unfortunately all the rooms are small.

About three leagues from hence, we entered another vaft forest of the ilex, where we saw many droves of swine, a village with a church,

a church, and only four cottages, including the habitation of the curate. Here we took up our quarters in the middle of the day; and having left it, were proceeding towards Piedrahita, when a fall of heavy and inceffant rain compelled us to stop short of it, and to have recourse for shelter to a miserable village called Malpartido. The posada had only one bed for the use of the whole family; and as that was occupied by a lad, fon to the good woman of the house, then dying of a putrid fever, we had a most uncomfortable prospect for the night. Befides the bed-chamber, they had, as usual, a kitchen, a room of about ten feet square, with an elevated hearth in the centre of it, over which a little opening in the roof afforded a vent for the fmoke. Around the hearth was a wide bench, which by day fupplied the place of chairs, and by night ferved the purpose of a bed. Upon this they defigned to scatter straw for me, leaving my guide to measure his length on the bare board at the other end of this magnificent apartment. Happily, however, I had a pass from count Campomanes in my pocket. This I fent, with my humble duty

to the alcalde, requesting that he would be pleafed to procure me a lodging for the night. In a few minutes the messenger returned, and foon after the alcalde was announced. I rose up instantly, prepared to meet him with profound respect; but, instead of a haughty magistrate, such as my imagination had conceived him, behold a little infignificant man, humble in his appearance, dreffed in a coleto, or leathern jacket destitute of sleeves, and bound close round him with a girdle of the same materials. He informed me, that he had made all arrangements, and that the best bed in the village was preparing for me. He had scarcely finished, when the young man, whose place I was to occupy, entered to expostulate; but the alcalde cut him short with no bay remedio; and therefore, finding that it was to no purpose to complain, he quitted possession with a good grace, and took up his lodging in the house of some relation. Having thus fecured a bed, I left my guide to take good care of the alcalde, as a token of gratitude for his attention, and retired to my quarters for the night.

In my new habitation I met with a comfortable bed, clean sheets, and a kind reception from the family; and when I was to
quit them in the morning, they could not
be prevailed upon to accept a recompense.
I was much surprised at finding such generous sentiments in a cottage; but I have
since had frequent opportunities of admiring the high spirit of the Spaniards, and, in
many instances, their contempt for money.

The putrid fever was not confined to the posada; it raged without restraint; and, not only in this village, but in those of the vicinity, there was fcarcely a house from which they had not lately buried one of the family. It is much to be lamented, that the curates in Spain are not taught the management of fevers. As they must attend the dying, to administer the sacraments, it would be a deed of mercy well fuited to their character, and by no means inconfiftent with their facred functions, should they learn to prescribe the medicines, which, in England, when properly applied, generally fucceed in checking the disease, and rescuing from death. This knowledge may be eafily acquired; and whenever it shall be univerfally

univerfally diffused, fevers will cease to be so destructive as at present, and will be seared in many cases no more than fire, which, well regulated, is not only safe, but salutary; yet, if suffered to spread, is fatal to the house. It is not my intention to infinuate, that the two professions of physic and divinity should be united, but only that in every place there should be some one at hand who might endeavour to extinguish this destructive slame the moment it appears; and, considering how small and thinly scattered are the villages in Spain, and how wretched their inhabitants, the curate is the only person from whom they may naturally expect relief.

The country beyond Malpartido is exceedingly broken; and the granite rocks, exposing their rugged fronts without a covering, shew clearly, that the summit of this great chain of mountains is not remote. We had been ascending all the way from Salamanca; but when we left the Tormes, as we draw nigh to Piedrahita, the waters take another course, and run into the Adaja.

Piedrabita is a village of one hundred and fifty houses, with three convents and a beaterio, belonging to the dutches of Alba, and

famous

famous only on account of a country-feat erected here by the late duke, in imitation of the English. Instead of being built round a court, with a corridor, like the Spanish houses, it presents a front of one hundred feet, with two projecting wings of fixty feet; and the ground floor, instead of being abandoned to coach-house and stables, is occupied by the kitchen, the offices, and the principal apartments; and over thefe, are bed-chambers for fervants. Contrary to the Spanish custom, every room is ceiled, and the walls are papered. Altogether, it is a comfortable refidence; but, to an Englishman, it has no great pretentions. Had not the fairest part of its furniture been removed, it would have feemed more beautiful; for the dutchess, who had been there with her friends for a few weeks during the greatest heats of summer, was lately returned to court, and her presence would have made a more humble habitation appear enchanting.

In leaving Piedrahita, we continued along the valley, shut in between high mountains, all covered with the ilex and gumcistus. These, mixed with the grey granite rocks,

[97]

make a beautiful appearance. As we advanced, we overtook feveral Merino flocks returning to the fouth. Near the Cafas del Puerto, we entered another valley, running east and west near ten leagues, and never much more than a mile in breadth. At the end of it, stands Avila.

The foil is fand; the plough is like that last described; the fields are divided into small portions; and the pasture is common. Their sheep are folded, and the shepherd remains all night with his dogs near his slock, sheltered only by a straw cabin, just large enough to stretch himself at length. They have no iron about their carts, either on the wheels or axle-tree; the whole is wood. The oxen are yoked in pairs, and draw heavy burdens by their horns. The dress of the peasant is the coleto.

As foon as we arrived in Avila, I visited the market, to make, as usual, provision for the day; and having purchased a kid, which, when the Merino flocks are passing, sells for about ten reales, or two shillings, I sent it to the cook's shop, and then began my rambles. Whilst I was making some enquiries, a gentleman accosted me, gave

Vol. II. H

me the informations I required, undertook himfelf to be my guide, and, before we parted, made me engage to dine with him. This was D. Baltafar Lezaeta, a prebendary of the cathedral; from whom I received as much attention as if I had been recommended by a friend.

Avila has at prefent only a thousand houses, or one-fixth part of its former population; yet the convents are not diminished, being sixteen in number, nine for men, seven for women. Besides these, it maintains eight parish churches, a cathedral with forty canons, sive hospitals, and a university. No wonder, then, that it should swarm, as it does, with sturdy beggars.

This city, built upon a granite rock, and inclosed by a wall, with eighty-eight projecting towers, has every where the appearance of great antiquity, but more especially

in the cathedral.

In this are many things worthy of attention, but principally the cloister, for its exquisite neatness, and elegant simplicity. The facristy is a good building, and the treasure contained in it, both in plate and jewels,

jewels, would in England be called ineftimable. The custodia, as usual, of solid silver, is four feet high, adorned with Ionic,
Composite, and Corinthian columns, and
displays much taste both in its design and
execution. Among their jewels they have
the pectoral of the late archbishop of Toledo, the infant don Luis, valuable chiefly
for its gems, all large and of the finest water. The choir has beautiful carvings.

Of the convents, the most remarkable are those of the Carmelites; one for nuns, the other for friars; the latter built upon the fpot where S. Terefa was born, the former. where she took the veil. In this, the principal thing at prefent worthy to be noticed, is a picture by Morales, reprefenting a dead Christ in his mother's arms; of which, nothing need be faid after having named the painter, because all his works have such peculiar foftness and expression, that men have univerfally agreed in calling him, divine. The Carmelites of Avila once poffessed a treasure infinitely more valuable to them than all the pictures ever painted by Morales: this was the body of S. Terefa. It was originally interred at Alba, A. D.

H 2

1582,

1582, but three years afterwards it was fecretly taken up, and conveyed to Avila, where it was not fuffered long to rest; for the duke of Alba finding all other expedients vain, made application to the pope, and obtained an order for its return.

The life of S. Terefa, lately published among those of other faints, by the Rev. A. Butler, is peculiarly interesting. Her frame was naturally delicate, her imagination lively, and her mind, incapable of being fixed by trivial objects, turned with avidity to those which religion offered, the moment they were presented to her view. But unfortunately meeting with the writings of S. Jerom, she became enamoured of the monastic life, and quitting the line for which nature defigned her, she renounced the most endearing ties, and bound herself by the irrevocable vow. Deep melancholy then feized on her, and increased to such a degree, that for many days she lay both motionless and fenseless, like one who is in a trance. Her tender frame, thus shaken, prepared her for extafies and visions, such as it might appear invidious to repeat, were they not related by herfelf, and by her greatest

greatest admirers. She tells us, that in the fervour of her devotion, the not only became insensible to every thing around her, but that her body was often lifted up from the earth, although she endeavoured to refift the motion; and bishop Yepez relates in particular, that when she was going to receive the eucharift at Avila, she was raised in a rapture higher than the grate, through which, as usual in nunneries, it was presented to her. She often heard the voice of God when the was recovered from a trance, but fometimes the devil, by imitation, endeavoured to deceive her; yet she was always able to detect the fraud. She frequently faw S. Peter and S. Paul standing on her left hand, whilst our Lord prefented himself before her eyes in such a manner, that it was impossible for her to think it was the devil; yet, in obedience to the church, and by the advice of her confessor, she insulted the vision, as she had been used to do the evil spirits, by crossing herself, and making figns of fcorn. Once, when the held in her hand the crofs which was at the end of her beads, our Lord took it from her, and when he restored it, she

faw

faw it composed of four large gems incomparably more precious than diamonds. These had his five wounds engraved upon them after a most curious manner; and he told her that she should always see that fame appearance: and fo she did; for from that time she no longer saw the matter of which the cross was made, but only these precious stones, although no one faw them but herfelf. Whenever devils appeared to her in hideous forms, she soon made them keep their distance, by sprinkling the ground with holy water. She had often the happiness of seeing souls freed from purgatory, and carried up to heaven; but the never faw more than three which escaped the purifying flame, and these were F. Peter of Alcantara, F. Ivagnez, and a Carmelite friar.

It is acknowledged, that many of her friends, distinguished for their good sense and piety, after examination, were of opinion, that she was deluded by the devil; yet such was the complexion of the times, that she was at last universally regarded as a faint. She had indeed every thing needful to conciliate the good opinion of her friends, and the admiration

admiration of the multitude. The grace-fulness and dignity of her appearance, the softness of her manners, and the loveliness of her disposition, the quickness of her wit, the strength of her understanding, and the sire of her imagination, all her natural accomplishments receiving lustre from her exalted piety and zeal, from the sanctity of her life, and the severity of her discipline, all conspired to establish her reputation, as one that had immediate intercourse with heaven.

It is curious, yet most humiliating, to fee a person of this description, amiable and respectable as S. Teresa, deceived, and, with the best intentions, deceiving others. In this instance, we can readily account for the delufion from the delicacy and weakness of her frame, the strength of a difturbed imagination, and the prevalence of fuperstition. But when we see men of the finest understandings, in perfect health, of different and distant nations, in all ages, treading upon the fame inchanted ground, we can only wonder; for who can give any rational account of the aberrations of our reason? The history of mysticism, if well written. H 4

written, would be highly interesting, as embracing some of the finest characters that were ever admired in the world. Should any able writer be engaged to undertake this work, he will explain to us the principles upon which Bossuet, that prodigy of learning, persecuted Fenelon, the most amiable of men, whilst S. Francis of Sales was the object of his adoration; and why he poured contempt upon Madame Guion, whilst he had the highest reverence for S. Teresa.

This extraordinary woman, cherished by sovereign princes, universally admired whilst living, and worshipped when dead, had the happiness of leaving behind her sixteen nunneries, and sourteen convents of friars, sounded by herself, and subject to the order of Carmelites, which she had reformed.

Avila, although it no longer possesses her remains, yet, as the place of her nativity and chief residence, is much resorted to at the season of her session. It has no manusactures. Some years since they began making cloth, but the situation not being favourable, the project was abandoned, and their dependence at present is on the produce

of the foil. The country abounds with faffron, and this for a feafon finds employment for the women and the children. Were it not for the cathedral and the convents, the city would be deferted, because not one proprietor of land resides here; the whole being either rented, or held in administration, as they express it; that is, cultivated by stewards on the proprietors account.

No country can fuffer more than Spain for want of a rich tenantry; and, perhaps, none in this respect can rival England. We find univerfally that wealth produces wealth; but then, to produce it from the earth, a due proportion of it must be in the pocket of the farmer. Many gentlemen among us, either for amusement, or with a view to gain, have given attention to agriculture, and have occupied much land; they have produced luxuriant crops, and have introduced good husbandry; but, I apprehend, few can boast of having made much profit, and most are ready to confess that they have fuffered lofs. If, then, refiding on their own estates, with all their attention, they are confiderable lofers, how great would be the loss, if in distant provinces vinces they employed only stewards, to plough, to sow, to sell, and to eat up all the produce of their lands? In France they are so sensible of this, that for want of wealthy farmers, the proprietor finds stock, and takes his proportion of the produce; but in Spain, excepting a few provinces, the lands are commonly in administration; and hence, extensive districts yield only a contemptible revenue to their lord.

From Avila we proceeded about a league, through a rich valley, and then began to climb those mountains, which, dividing the two Castilles, formed for many ages the strong barrier between the Christians and the Moors; till Ferdinand I. descending with the united forces of Castille and Leon into the plain, drove the infidels before him, and displayed his victorious banners in Guadalajara, Alcala, and Madrid.

On these high mountains we travelled near five leagues without seeing a human face, or habitation, and scarcely a beaten track.

At a lower level we found the ilex. As we ascended, these were succeeded by the roble oak; but near the summit we saw only

only pines, with the juniperus europeus, the daphne mezereum, the matricaria fuavis, the genista, and a variety of aromatic herbs, but chiefly thyme. At almost every level, the ciftus tribes abound upon the granite mountains, excepting where, like these, the summits are covered with an eternal snow.

The first little village we passed through, is called Naval Peral; the next, at the distance of a league, Navas del Marqués: this, although it has only fifty cottages, has a church, a chapel, and a convent. From hence we proceeded about three leagues, and then began descending into the plains of New Castille.

All the way from Salamanca I observed faffron growing wild, which, if collected, would help to employ the poor in their villages, and yield considerable profit.

As we approached the Escurial, we entered upon the king's hunting road, made like those of England, rather for use than beauty. Had the Spaniards been every where satisfied with such, where they have finished one league, they might have completed twenty. Their ambition aims in

every thing at perfection, and by feeking too much, they often obtain too little. The idea they have formed to themselves of a perfect road, in point of utility, is most undoubtedly well founded; but in attempting to reduce this to practice, they are forced to lofe much time, and to expend more money than the benefit to be derived from it is worth. Had their ambition been less aspiring, ere now a communication would have been opened between all their great cities, and much of their produce, now loft, would have found a market. This hunting road should convince the theorists among them, that a high-way may be firm without fide walls, and support any given weight without fuch a foundation of huge rocks as would be needful for a caftle. And although, for the mere purpose of expedition, to be perfectly both straight and level would be defireable, yet the traveller is better pleased where he finds variety, and is charmed, as he proceeds, with a constant fuccession of new prospects.

On my arrival at my journey's end, I found a letter from our minister, Mr. Liston, to inform me, that when the court

left S. Ildefonso, where he had been for some time expecting me, he had visited Madrid, and that he should not come to the Escurial till the beginning of the week.

Having therefore fome time to spare for the excursion, I immediately proceeded to repass the mountains, not returning by the fame road, but going eastward by Guadarrama, and croffing by the Puerto de Fuenfria, a pass so called from the coldness of its waters. This puerto is elevated, and the prospect from it is delightful; but with the fcorching fun, the afcent to it is fcarcely bearable. In looking down towards Segovia, the whole country appears level, like the furface of a lake, and extended like the ocean; but, as we descend into this plain, we fee the mountains rife before us. The country immediately around us, near this fummit, is majestically wild, with deep ravins and projecting rocks, covered with pines wherever pines can grow, and torn by raging torrents.

In a deep recess, open and exposed only to the north wind, stands S. Ildefonso, enjoying freshness, and gathering the fruits of spring,

110 7

fpring, when all to the fouth of these high mountains, fainting with heat, are engaged in reaping, and collecting the autumnal crops. This change of climate, in the space of eight leagues, for that is the distance from the Escurial to S. Ildefonso, induced

Philip V. to build a palace here.

S. Ildefonfo occupies three fides of a fquare, the two wings of which being joined, each by a long range of buildings, defigned for the king's retinue, and closed in at bottom by iron gates and rails, the whole forms a beautiful and spacious area. The principal front, of five hundred and thirty feet in length, is to the fouth, looking to the garden, and through its whole extent the apartments communicate with all the doors on the fame line.

To give fome idea of the pictures, it may be fufficient to name the masters, whose works have been here collected by Philip, and by fucceeding princes. The principal are, Leonardo de Vinci, Michael Angelo, Raphael, Hannibal Caraci, Guercino, Guido, Carlo Maratti, Correggio, Rubens, Poufin. Paul Veronefe, Woverman, Teniers, Martin de Vos, Andrea del Sarto, Vandyke,

[111]

Vandyke, Dominicini, Tintoret, Albert Durer, Jordano, Velazquez Ribera, Ribalta, Valdez, Murillo, Mengs. In the church, the fresco paintings are by Bayen, Mariano, and Maella.

In the lower apartments is a collection of antique statues, made by Christina, queen of Sweden, and considered as inestimable.

The church is dark, but elegant; and, with respect to treasures, has sew to rival it in Spain. Among the vast variety of gold and silver ornaments, the most striking is one of the *custodias*, valued originally at seventy thousand ducats, or £.7,690. 8s. 6d. sterling.

The garden occupies a ridge, rifing to the fouth, and falling both to the east and to the west. Near the palace it is laid out in the old taste, with clipped hedges and straight walks, adorned with numerous fountains; but in proportion to the distance, it becomes more wild, and terminates in the uncultivated and pathless forest, where the cragged rocks appearing among oaks and pines, present a striking contrast with the works of art.

[112]

This garden, delightful for its walks, which, although shady, are neither damp nor gloomy, is most to be admired for its fountains. Of these, the most remarkable are eight, dedicated to the principal heathen deities, and adorned each with its proper emblems. In one, Diana appears attended by her nymphs, who are hiding her In another is feen Latona from Acteon. with Apollo and Diana, furrounded by fixty-four jets of water. The most surprising is Fame feated on Pegafus, with a trumpet to her mouth, throwing up a stream of more than two inches in diameter to the height of one hundred and thirty-two feet. But the most pleasing fight is the Plazuela de las Ocho Calles, where eight walks unite. each with its fountain in the centre, and where eight other fountains, under lofty arches, supported by Ionic pillars of white Italian marble, form an octagon, adorned with the images of Saturn, Minerva, Vesta, Neptune, Ceres, Mars, Hercules, and Peace, standing round it; and Apollo, with Pandora, in the middle. The statues are all of lead, varnished in imitation of brass, and were made by Fermin and Tierri. Befides Besides sountains innumerable, here are vast reservoirs and falls of water, so disposed as to contribute much to the beauty of the place. When we consider, that the whole of the garden was a barren rock, that the soil is brought from a great distance, and that water is conveyed to every tree; when we reslect upon the quantity of lead used for the images, and of cast iron for the pipes, with the expence of workmanship for both, we shall not be surprised to hear that this place cost forty-sive millions of piastres, or, in English money, near fix millions and an half.

Nothing is more whimfical than tafte; but, if it be true that beauty is founded in utility, this place will always deferve to be admired. In the prefent day, it is not uncommon to build the manfion in the middle of a field; open and exposed to every wind, without shelter, without a fence, and wholly unconnected with the garden. Near the habitation all is wild, and art, if any where, appears only at a distance. In all this we can trace no utility, nor will succeeding generations discover beauty. On the contrary, in the garden of S. Ildesonso, Vol. II.

we find every thing which in a fultry feafon is defirable; a free circulation of air, a deep shade, and refreshing vapours to abforb the heat; whilst from its contiguity to the mansion, the access to it is easy, and at any time these comforts may be instantly enjoyed; yet, without these numerous sountains, the clipped hedges, and the narrow walks, the circulation would be less rapid, the shade less deep, and the refreshing vapour would be wanting.

The glass manufacture is here carried to a degree of perfection unknown in England. The largest mirrors are made in a brass frame, one hundred and sixty-two inches long, ninety-three wide, and six deep, weighing near nine tons. These are designed wholly for the royal palaces, and for presents from the king. Yet, even for such purposes it is ill placed, and proves a devouring monster in a country where provisions are dear, sewel scarce, and carriage exceedingly expensive.

Here is also a royal manufacture of linen, employing about fifteen looms; by which, as it is said, the king is a considerable

lofer.

Being now within the distance of two short leagues from Segovia, I could not return without paying a visit to that interesting city. In the way to it, there is little appearance of cultivation, and the obvious reason is the continual depredations occafioned by the royal deer. As we passed through the woods, before we came into the open field, we saw vast herds of them, unconfined, and free to range unmolested over all the country.

In Segovia, the first object to attract the eye, is the aqueduct. It contains one hundred and fifty-nine arches, extends about seven hundred and forty yards, and, where it crosses the valley, it is something more

than ninety-four feet high.

The cathedral has no great pretensions; yet in one of the chapels there is a good altar, with the Descent from the Cross well executed in mezzo relievo, by a disciple of Michael Angelo, and finished A. D. 1571. The church is nearly upon the model of the great church at Salamanca, but it is not so highly finished.

The Alcazar, or ancient palace of the Moors, has been so often described, that I

should pass it over in silence, did not the attentions I received there deferve a particular remembrance. I had no letters, and count Lacy, the inspector, was absent; but, upon prefenting myself to his lieutenant, as a stranger, he received me with politeness, and conducted me to every apartment. This strong tower is no longer, as formerly, a state prison: it serves a more honourable purpose, and is devoted to one hundred cavaliers, who are here instructed in the military science. The fight of this building gave me pleasure, more especially the great hall, with the images of all their monarchs; but the highest satisfaction was, to see the Spanish character strongly marked in the countenances of many among the young gentlemen who are educated here. A Spaniard may possibly grow rich in trade, he may make a progress in the sciences, but, were he left to follow his natural inclination, he would certainly betake himself to a military life; and for that, if generofity, if patience and fortitude, if a spirit of enterprize, are requisite, in all these the true Spaniard will excel.

Segovia was once famous for its cloth,

made on the king's account; but other nations have fince become rivals in this branch, and the manufacture in this city has been gradually declining. When the king gave it up to a private company, he left about three thousand pounds in trade; but now he is no longer a partner in the bufinefs, In the year 1612, were made here, twentyfive thousand five hundred pieces of cloth, which confumed forty-four thousand fix hundred and twenty-five quintals of wool, employed thirty-four thousand one hundred and eighty-nine persons; but at present they make only about four thousand pieces. The principal imperfections of this cloth are, that the thread is not even, and that much greafe remains in it, when it is delivered to the dyer; in confequence of which, the colour is apt to fail.

In the year 1525, the city contained five thousand families, but now they do not surpass two thousand; a scanty population this for twenty-five parishes: yet, besides the twenty-five churches, together with the cathedral, they have one and twenty convents. When the canal is finished, and the communication opened to the Bay of Biscay

I 3

at S. Ander, the trade and manufactures of Segovia will revive; but, previous to that event, there can be nothing to inspire them

with hope.

As we returned (October 28,) towards New Castille, my intention was to have travelled at our leisure; but, observing some degree of impatience in my guide to repass the mountains before night, I was happy to indulge him; and the next morning, when I looked back and saw the losty summits covered deep with snow, I comprehended the reason of his solicitude. The ways behind us were rendered thus for the time impassable, whilst all before us had been only watered by soft and refreshing showers.

In the Old Castille, the usual price demanded by a muleteer is four reals a day for himself, as many for his mule, and six for barley, altogether equal to 2s. 9d.; but, should you omit to make a bargain, you must depend upon his mercy. The whole expence of travelling may be reckoned at ten shillings a day, if you go straight forwards; but if you make a circle, or return with the same mule, it comes to about

musication opened to the

7s. 6d.

The convent of S. Lorenzo is feated in a deep recess, at the foot of those high mountains which separate the two Castilles, and protected from every wind except the foutheast; it looks down upon a wide extended plain, with all the neighbouring hills covered by thick woods, whilst the mountains to the north are bare, or covered almost perpetually with fnow. It was built by Philip II. in obedience to his father Charles V, to accomplish his vow made after the battle of S. Quintin, which he gained by the interceffion of S. Lorenzo. In honour of that faint, the architect, Juan Bautista de Toledo, took his idea from a gridiron, the instrument on which he fuffered, making the royal refidence project by way of handle, and representing, not only the bars by multiplied divisions, but the legs, by four high towers placed in the angles of this edifice. The dimensions of the convent are seven hundred and forty Spanish feet by five hundred and eighty, and the height is fixty; but the dome of the church is three hundred and thirty. The whole was finished under the inspection of Juan de Herrera, who was pupil to Bautista.

The friars of this convent are one hun-I 4 dred dred and fixty, and their annual revenue is five millions of reals, or about fifty thousand pounds, arising partly from land, and partly from their flock of thirty-fix thousand Merino sheep, besides one thousand kept constantly near home, for the consumption of the family.

Their library confifts of thirty thousand volumes, contained in two magnificent apartments, each, one hundred and ninety-four Spanish, or something more than one hundred and eighty-two English seet in length. In the lower room, are chiefly printed books; yet in it is deposited the famous manuscript of the Four Gospels, written in gold letters, a work of the eleventh century. Over these are collected four thousand three hundred manuscripts, of which five hundred and fixty-seven are Greek, sixty-seven Hebrew, and one thousand eight hundred Arabic, the latter well described in a catalogue lately published by Casiri.

In the middle of the lower room is a temple, with a great variety of figures, containing one thousand four hundred and forty-eight ounces of filver, and forty-three of gold, beside rich gems.

To a connoisseur in paintings, no place

can afford higher entertainment than the convent of the Escurial. In every part of it are feen the works of the best masters, and fome of their most capital performances, It were endless to enumerate particulars, Suffice it to fay, that during the residence of a month, I never failed a fingle day vifiting the convent, and never left it without regret; always giving a more minute attention to the productions of those artists who are the least known in England. I had peculiar pleasure in finding here, so many monuments of Titian, who, during a refidence of five years in Spain, constantly exercifed his pencil to enrich this nation, and to immortalize his name. The pictures which most rivetted my attention, were the famous Supper of Christ with the disciples, by Titian; and a Holy Family, by Raphael; the latter once in the possession of our Charles, but fold by Cromwell, and purchafed by the Spanish ambassador, for two thoufand pounds: it is called La Perla. The best of the pictures are collected in five principal apartments: in the facrifty, a room of one hundred and eight by thirty-three; in the iglesia vieja, which is one hundred and five by thirty-four; and in two halls

of eighty by twenty, with their antichamber. These last are called Las Salas de los Capitulos, and, whilst the court is here, are occupied by count Florida Blanca, on his public days. The great stair-case is beautiful, adorned with fresco paintings of the battle of S. Quintin, by Luca Jordano.

The pantheon, or catacomb, where the royal family, beginning with Charles V. are buried, is a fubterranean vault of beautiful marble, highly finished, capable of receiving twenty-fix bodies, each in its own recess.

As for the treasures of the church, they are inestimable. The image of S. Lorenzo alone contains four hundred and fifty pounds of filver, with eighteen pounds of gold; yet this bears a small proportion to the rest.

At a little distance from the convent, the prince of Asturias, and one of his brothers, the infant Don Gabriel, have each a little box, fitted up with exquisite taste, and hung with the best pictures, to which they often retire with their friends. That of the prince is the most elegant, and, as far as can be warranted by one specimen, forms a happy presage for the arts, whenever he shall mount the throne.

The Escurial, as a residence, is far from pleasant.

pleafant. Were it low, and sheltered, like Aranjuez, it would be agreeable in spring; or, were it clevated, hanging to the north, and covered by thick woods, like S. Ildefonzo, it might be delightful as a retreat in fummer; but exposed, as it is, to the full stroke of the meridian fun, and raised up near to regions covered with eternal fnow, without shelter, and destitute of shade, it has no local charms at any feafon of the year. The ministers, foreign and domestic, give good dinners, and do every thing they can to make this folitude supportable; but, as few ladies can be accommodated here, the affemblies want that gaiety which is peculiar to the fex.

The king spends most of his time in shooting. In the middle of the day, after a short excursion, he returns to dinner, converses with the foreign ministers, retires for a few minutes with his confessor, and, generally before three, sometimes much sooner, leaves the palace, and goes to the distance of twenty or thirty-miles before he begins to hunt. When the light sails, he gets into his carriage, and returns. No weather deters him, because he is not afraid of either thunder,

thunder, lightning, hail, rain, or fnow, but when one cloak is wet, he puts on another; and as for his attendants, he tells them coolly, "Rain breaks no bones." No holidays detain him from his fport, except two in the passion-week; and then, although he is naturally of a most placid temper, he is faid to be fo cross that no one chooses to come near him. Even when one of his fons was thought to be at the point of death, he went out as usual, always infisting that he would certainly recover; and when informed that his fon was dead, he replied, with his accustomed calmness, "Well, then, since " nothing can be done, we must make the " best of it." His usual attendants are the prince of Asturias, the captain of the guard, his mafter of the horse, his groom of the stole. his physician, and his furgeon. All these occupy five carriages; befides which, there is one for medicines, guns, ammunition, dry clothes, &c. Each carriage has fix mules; and as, upon the road, there are feveral relays for them and for the guards, the number required for daily use is about two hundred. Their rate of travelling is twelve miles an hour; in consequence of which, accidents

[125]

accidents happen frequently to the men, and to the mules.

In hunting, the king does not depend altogether on his dogs: he has commonly about two hundred men employed to beat up the game, and drive it towards him at convenient places, where he and the prince are ready, with fervants attending to charge the guns, and to hand them forwards as fast as they are fired. No game comes amiss to him; but he is peculiarly flattered with the idea of delivering the country from wolves, of which he keeps an exact account; and, when I was at the Efcurial, the number he had shot was eight hundred and eighteen. Whenever one is heard of within a reasonable distance, a multitude of people, from fixteen hundred to two thousand, according to the extent of the mountain, are fent out to watch, furround, and drive it into fome fpot, where the king may have the best chance for killing it. To these he gives fix reals each; but if he kills the wolf, the watchmen have double pay. This expence, it must be confessed, is needless; because a few peasants would often be sufficient, either to destroy the enemy, or make him

him quit the country; but where a good fovereign has pleasure in a pursuit, his subjects will be the last to think that he can purchase it too dearly. It were happy, however, for Spain, were this the whole expence; but it certainly bears a small proportion to the fum total of what the nation loses by the king's rage for hunting. All round the fities, or royal mansions, the wastes are of vast extent. I am informed. that the forest of the Pardo is thirty leagues in circumference; and if to this be added. all the uncultivated land near Aranjuez, S. Ildefonfo, and the Escurial; if, moreover, we confider that the deer, being unconfined, range freely over the intermediate country, how high will be the estimate! It is true, the king pays the farmers to the utmost for the damages they fuffer; but then, the injury fustained by the community cannot be fo eafily compensated, because the country, wanting food, is depopulated, and the villages are gone to ruin.

I have been told by those who are best acquainted with the king, that in his youth he had acquired a taste for letters, but being checked in that pursuit, he had given

4

fcope

fcope to the family propenfity, a propenfity not only now confirmed by inveterate habits, but encouraged in himself with a view to avoid entanglements. He is certainly a man of principle, and is universally allowed to be one of the most virtuous men in his dominions; but this purity of morals he himself attributes to his mind being constantly amused, and not to his natural constitution.

I prolonged my stay at the Escurial, chiefly for the purpose of being present at the *Batida*, or royal hunt, of which there are four every year. This was ordered for the 28th of November, previous to the departure of the court.

On the day appointed, Mr. Liston had the goodness to place me with the Neapolitan ambassador, who, as representing one of the family, gave a sumptuous repast upon the occasion; and in his carriage I proceeded to the scene of action. It was an extensive plain, with a rising ground commanding it, and, at the distance of about half a mile from this eminence, rose a little wood, in which the king, with his three sons, were hid, attended by their servants.

For many days previous to this, two thous fand men had been dispersed in parties over the whole country to diffurb the game, and to drive it towards the common centre, by patroling night and day, and conftantly, yet flowly, drawing nearer to each other. Soon after we had occupied our station on a rifing ground, we began to fee the deer at a vast distance bounding over the plain from every quarter, and making towards the fatal spot. As they approached, we heard, faintly at first, then more distinctly, the found of guns, and faw the confusion of the game: moving quick in all directions, but changing their course at every instant, as if uncertain where to look for fafety. When the fcouring parties came first in fight, they appeared to be separated by intervals, and to confine the game merely by their shouts and by the firing of their arms; but as they advanced upon the plain, they formed a wall. and as they drew nearer, they strengthened this by the doubling of their ranks, compelling thus the game to pass in vast droves before the royal markimen. Then began the carnage; and for more than a quarter of an hour the firing was inceffant. Some of the

the deer, who had either more discernment than the rest, or a better memory; who were actuated by stronger fears, or, perhaps, by more exalted courage, abfolutely refused to proceed, when they approached the ambuscade; and, making a quick turn, notwithstanding the shouts, the motions, and the firing of the guards, they leaped clean over their redoubled ranks, and escaped into the woods.

When the firing ceased, the carriages all advanced towards the wood, and the company alighted to pay their compliments, and to view the game. We found part of it spread in two rows upon the field of battle, and the king, with his fons, furveying it. The game-keepers were returning loaded with fuch as had been mortally wounded, but had yet escaped to a considerable diftance; and, as fast as they arrived, they deposited the spoil at the sovereign's feet. Having the curiofity to count the numbers, I found one hundred and forty-five deer, with one wild boar. Whilft thus engaged, I heard a murmur, and faw every one in motion. Directing my attention to the fpot VOL. II.

K

to which all were preffing, I faw at a diftance a little company coming with a boar tied neck and heels together, and flung upon a pole. As they approached, the monarch and his fons, arming themselves afresh, drew up in a line; and when they were at a convenient distance, the burthen was deposited, the cords, one after another, were cut, and the poor crippled animal was assaying to move, when a well directed volley freed him from his fears.

The expence of that day's fport was reckoned at three hundred thousand reals, or, in sterling, three thousand pounds.

In the evening, the game, as usual, was all deposited in the room where the king took his supper, and there the family ambassadors attended to pay their compliments. By family ambassadors are understood those of Naples, Portugal, and France, who having more free access, and being expected to pay more minute attention, think it incumbent upon them to express their interest in every thing which gives him pleasure, and not only congratulate him upon these great occasions, but every night, whilst he is at supper,

fupper, make enquiries, and afterwards inform their friends, what the king has killed.

Mr. Liston, desirous of quitting the Escurial previous to the departure of the court, ordered a Coche de Colleras to be ready the day after the Batida. This precaution is taken by the foreign ministers to secure mules, because, when the court is in motion, no less than twenty thousand being required for their use, the whole country is laid under an arrest, and neither horse nor mule can be obtained for any other purpose.

In this little journey I was exceedingly diverted and furprifed with the docility of the mules and the agility of their drivers. I had travelled all the way from Barcelona to Madrid in a Coche de Colleras, with seven mules, and both at that time, and on subsequent occasions, had been struck with the quickness of understanding in the mule, and of motion in the driver; but till this expedition, I had no idea to what extent it might be carried. The two coachmen sit upon the box, and, of the six mules, none but the two nearest have reins to guide K 2

them; the four leaders being perfectly at liberty, and governed only by the voice. Thus harneffed, they go upon the gallop the whole way, and when they come to any short turning, whether to the right or to the left, they inflantly obey the word, and move altogether, bending to it like a fpring. As all must undergo tuition, and require frequently fome correction, should any one refuse the collar, or not keep up exactly with the rest, whether it be, for example, Coronela or Capitana; the name pronounced with a degree of vehemence, rapidly in the three first fyllables and slowly in the last, being sufficient to awaken their attention, and to fecure their obedience, the ears are raifed, and the mule instantly exerts her strength. But, should there be any failure in obedience, one of the men springs furious from the box, quickly overtakes the offending mule, and thrashes her without mercy; then, in the twinkling of an eye, leaps upon the box again, and calmly finishes the tale he had been telling his companion. In this journey I thought I had learnt the names of all the mules, yet one which frequently occurred created fome

fome confusion, because I could not find to which individual it belonged, nor could I. distinctly make out the name itself. It founded like Cagliostra, and led me to imagine that the animal was fo named after the famous impostor Cagliostro, only suiting the termination to the fex, because the mules in harness are usually females. In a subsequent journey the whole difficulty vanished, and my high estimation of the mule, in point of fagacity, was confirmed. word in question, when distinctly spoken, was aquella otra; that is, you other alfo; and then, fuppofing Coronela and Capitana to be pairs, if the coachman had been calling to the former by name, aquella otra became applicable to the latter, and was equally efficacious as the fmartest stroke of a long whip; but if he had been chiding Capitana, in that case, aquella otra acted as a flimulus to Coronela, and produced in her the most prompt obedience.

We did not leave the Efcurial till four in the afternoon, and at half after seven arrived at the duke of Berwick's, where we had been engaged to spend the evening, having travelled feven leagues in about three hours and an half.

MADRID.

BEING thus returned to the capital of Spain, where I spent the subsequent winter, it may not be improper to give some idea of the life a stranger leads here, with a few observations on the manners of the age.

Having been once introduced at court, you are at liberty to go as often as you please. I availed myself frequently of this privilege, both for the sake of viewing the paintings at my leisure, and for conversation, because at court is the general rendezvous, where men of distinction assemble every morning to pay their compliments to the several branches of the royal family, whilst they are at dinner, and to talk of what is passing in the world.

When the king gets into his coach, to go out, as usual, to his favourite amusement, the the company retires; and, as the corps diplomatique is here remarkable for hospitality, a person well recommended is never at a loss for the most genteel society at all hours of the day. Gratitude requires that I should express my obligations, in this place, to those, not only of the foreign ministers, but others, who honoured me with their friendship and protection. I shall therefore take the liberty of describing briefly the kind of life I led whilst I was near the court.

Count Florida Blanca must certainly claim the first place in my remembrance; for although at Madrid he gave no entertainments, yet in the sitios he had always the goodness to admit me into the number of his guests when he gave his weekly dinners. From our own minister I every where experienced, not merely that general protection which he gives to all, and those minute attentions for which he is universally admired, but the kindness, hospitality, and friendship of a brother. His house was at all times open to me, and when he gave a dinner to his friends, I never was forgotten.

K 4

My

My invitation to the duke de Vauguion's was both general and special. Here the dinners were magnificent, the company numerous, and the conversation interesting; and here I dined more frequently than at any other table in Madrid, attracted, however, neither by the magnificence of the entertainment, nor by the company which resorted to the house, so much as by the ease and elegance of the duke and dutchess, and the lovely simplicity of their children.

With the American, Russian, and Prussian ministers, I selt persectly at home; and not much less so with those of Genoa and Venice. The other foreign ministers often honoured me with invitations, and I was

always happy in accepting them.

Whenever I wished to cultivate the sciences, or to converse with men of letters, I frequented the more humble, but not less hospitable, tables of some native Spaniards, where I never failed to meet with a kind reception. With Izquierdo and Angulo, I increased my knowledge in mineralogy; and on whatever subject I was desirous of gaining information, I was sure to meet with satisfaction, either from them or from their

their friends. Ortega has been already mentioned as a botanist; D. Fro. Bayer will always be remembered as a polite scholar; and D. Juan Bautista Munoz will be celebrated as an historian, whenever he shall favour the public with his work on the conquest of America; Clavijo deferves the highest commendation, as a faithful and elegant translator, and as a man of general information. Befides thefe, I met with two brothers Fernandez, who have distinguished themselves in chemistry, and the Abbé Guevara, who excels in his knowledge of Spanish history, and political œconomy. With all thefe gentlemen I was upon a most friendly footing.

I dined frequently with the marquis Imperiali, a grandee of Spain, most deservedly admired for the goodness of his heart, and the softness of his manners; and once I had the honour to dine with the marquis de Ovieco, who is likewise a grandee.

This gentleman is pointed out as an example of an old Spaniard; and, if from one individual we might venture to form a general idea of a community, the politeness, probity,

probity, and true dignity, conspicuous in his whole deportment, must fill us with the highest reverence and esteem for the Spanish nation.

Like the French, the Spaniards drink their wine at dinner; but as soon as they have finished their desert, and taken coffee,

they retire to their couch.

When they rife from the fiefta, they get into their carriages to parade up and down the prado, never going fafter than a walk. As they move flowly on in one direction, they look into the coaches which are returning in the other, and bow to their acquaintance every time they pass. On some high days I have counted four hundred coaches, and, on such occasions it requires more than two hours to proceed one mile.

At the close of day, people say the usual prayer, then wish each other a good evening, and begin retiring to their houses, where they take their refresco of chocolate, with biscuits and a glass of water.

When you are properly introduced into a Spanish family, you are told at parting, "Now, Sir, you are master of this house;"

but the extent of the grant must be judged of by your own natural sagacity; because, such is the politeness of a Spaniard, that he makes use of this expression when nothing more is meant than that you are at liberty to call upon him; accordingly you see many retire before each meal, or drop in after it: but when it is taken in its full extent, the grant means dinner, refresco, supper, any or all, whenever it may suit you to partake of them.

Most families, especially the great, have their tertulla, or evening society for cards and conversation, after which, they, who are upon a footing of intimacy, stay and partake of a little supper. At these evening meetings you see the same faces from day to day. The society I chiefly frequented was at the dutchess of Berwick's; but I went often to the dutchess de Vauguion's, sometimes to the countess del Carpios, and too feldom I visited count Campomanes. Now and then, with a view to get an insight into the nature of society, I wandered away to other families, but not meeting any one with whom I had been previously acquaint-

[140]

ed, befides the lady of the family, I was foon weary, and could feldom prevail upon myfelf to prolong my stay.

Without any disparagement to the rest, I may venture to fay, that the fociety at the dutchess of Berwick's was the most pleasing; it was frequented by the foreign minifters, and, not only were the dutchess and her fifter, the princefs of Stolberg, most engaging in their manners, but the ease and freedom which every one enjoyed made the time pass delightfully. The dutchess herfelf, and three of her friends, occupied a whist table, some separated themselves for conversation, and the princess commonly, for a part of the evening, amufed herfelf with drawing, under the inspection and tuition of the Prussian minister, who, for tafte and execution, is one of the first masters in that line; others were engaged at the piano forte. For my part, I commonly took up my pencil, and profited by the leffons given to the princefs. At eleven o'clock we fat down to an elegant supper, and about one in the morning I retired, having nearly two miles to walk. The duke generally came home to supper, but he

he feldom fat long before he retired to his bed.

At the dutchess de Vauguion's the society was chiefly French. The amusements were cards, tricktrac, and chess, concluding with a supper.

At the countess del Carpio's all were Spaniards, excepting one Italian, and the amusement was some game at cards. The evening closed with a light supper. The count was commonly at home before ten, and, except when at the play-house, he spent his evenings in his family. He is a sensible man, and well informed; and the countess must give life to every society, where she is found. She is far from handsome; yet, from the sprightliness of her wit, and the softness of her manners, she is highly interesting, and the more so from her delicacy of constitution, and the weak-ness of her health.

Count Campomanes gives no suppers, and cards are seldom seen; but his conversation fills up the time, and renders all other species of amusement needless. The society is chiefly from the Asturias, where he was born.

[142]

Beside these quiet tertullas, all through the winter the dutchesses of Berwick and Vauguion gave balls once a week, and the countesses of Cogulludo and Penasiel gave concerts and balls, attended with splendid side-boards of ices, cakes, and jellies. After the ball, every one retired to supper with his own society.

When you pay a vifit to a lady, (for, wherever there is a lady in the family, the visit is to her) you neither knock at the door, nor ask any questions of the porter, but go straight forwards to the room where the usually receives her company, and there you feldom fail to find her, morning, noon, and night; in winter, fitting near the brafier, furrounded by her friends, unless when she is gone out to mass. The friends are mostly gentlemen, because ladies seldom vifit in a familiar way; and, of the gentlemen thus affembled, one is commonly the Cortejo; I fay commonly, because it is not univerfally the cafe. During the whole of my refidence in Spain, I never heard of jealoufy in a husband, nor could I ever learn, for certain, that fuch a thing existed; yet, in the conduct of many ladies, whether it proceeds proceeds from the remains of delicacy, from a fense of propriety, or from fear, you may evidently fee caution, circumfpection, and referve, when their hufbands are in fight. Some have address enough to keep the cortejo in concealment; and this, in Spain, is attended with no great difficulty, because, when the ladies go to mass, they are so disguised, as not to be eafily diftinguished. Their dress upon that occasion is peculiar to the country. They all put on the bafquina, or black filk petticoat, and the mantilla, which ferves the double purpose of a cloak and veil, so as completely, if required, to hide the face. Thus difguifed, they are at perfect liberty to go where they pleafe. But should they be attended by a fervant, he is to be gained, and therefore he becomes little or no restraint. Befides this, every part of the house is so acceffible by day, and the husband is so completely nobody at home, fo feldom visible, or, if visible, so perfectly a stranger to all who visit in his family, that the lover may eafily escape unnoticed. This, however, will not always fatisfy the Spanish ladies, who, being quick of fenfibility, and remarkable

able for strong attachment, are miserable, when their cortejo is out of fight. He must be present every moment in the day, whether in private or public, in health or fickness, and must be every where invited to attend them. There have been recent examples of women, even of high fashion, who have shut themselves up for months, during the absence of their cortejos; and this, not merely from difgust, but to avoid giving them offence. If the lady is at home, he is at her fide; when the walks out, she leans upon his arm; when the takes her feat at an affembly, an empty chair is always left for him; and if she joins in the country dances, it is with him. As every lady dances two minuets at a ball, the first is with her cortejo, the second with a stranger; with the former, if she has any vivacity, she makes it visible, and if she can move with grace, it then appears; but with the latter she evidently shews, not indifference, but difgust; and seems to look upon her partner with difdain.

As foon as any lady marries, she is teased by numerous competitors for this distinguished favour, till she is fixed in her choice;

when

when the unfuccessful candidates either retire, or submit to become, in future, what may be called cortejos of the brafier, without any pretensions beyond that of fitting round the embers to warm themselves in winter.

It is reckoned difgraceful to be fickle; yet innumerable instances are seen of ladies who often change their lovers. In this there is a natural progress; for it cannot be imagined, that women of fuperior understandings, early in life distinguished for delicacy of fentiment, for prudence, and for the elevation of their minds, should hastily arrive at the extreme, where passion triumphs, and where all regard to decency is loft; as for others, they foon finish the career. It is, however, humiliating to fee fome who appear to have been defigned by nature to command the reverence of mankind, at last degraded, and funk so low in the opinion of the world, as to be never mentioned but with contempt. These have changed so often, and have been so unfaithful to every engagement, that, univerfally despised, they end with having no cortejo.

Vol. II.

I have

I have observed, that jealousy is seldom, if ever, to be discovered in a husband; but this cannot be faid in favour of the new connection, because both parties are tormented by fuspicion. This, it must be confessed, is natural; for, as both are confcious that there is no other bond between them but the precarious tie of mutual affection, each must tremble at the approach of any one who might interrupt their union. Hence they are constantly engaged in watching each other's looks, and, for want of confidence, renounce, in a great measure, the charms of focial intercourfe. Even in public, they live as if they were alone, abstracted and absorbed, attentive only to each other. He must not take notice of any other lady; and if any gentleman would converse with her, in a few minutes she appears confused, and filled with fear that the may have given offence. In all probability she has; and should she be the first dutchess in the kingdom, and he only a noncommissioned officer in the army, she may be treated with perfonal indignity; and we have heard of one who was dragged by the

hair about the room. But if, instead of giving, the should happen to have taken the offence, even the more delicate will fly like a tygress at his eyes, and beat him in the face till he is black and blue. It fometimes happens, that a lady becomes weary of her first choice, her fancy has fixed upon some new object, and she wishes to change; but the former, whose vanity is flattered by the connection, is not willing to diffolve it. In lower life, this moment gives occasion to many of those affaffinations which abound in Spain; but, in the higher classes, among whom the dagger is profcribed, the first possessor, if a man of spirit, maintains posfession, and the lady dares not discard him, left an equal combat should prove fatal to the man of her affections. In this contest the husband is out of fight, and tells for nothing.

In a catholic country, with fuch depravity of morals, it may be naturally enquired, what becomes of confcience, and where is discipline? It is well known, that all are under obligation to confess, at least once a year, before they receive the eucharist. Every one is at liberty to choose his con-

L 2

feffor

fessor and priest; but before he leaves the altar, he takes a certificate that he has been there, and this he delivers to the curate of his own parish, under pain of excommunication, should he fail to do fo. When, therefore, a married woman appears, year after year, before her confessor, to acknowledge that the has been, and still continues to be, living in adultery, how can he grant her absolution, or how can he be moderate in the penance he enjoins. Without penance, and unless the priest is satisfied that there is contrition, with full purpose of amendment, there can be no absolution; without absolution, no participation of the eucharift; and, in the neglect of this, excommunication follows. Yet, from the universal prevalence of this offence, we may be certain, that there must be some way of evading the rigour of the law. Nothing is more eafy. As for the penance, it is imposed by those who can have compassion on the frailties of mankind, and is therefore scarcely worthy to be mentioned. In many instances, it is ridiculous. Were any confessor severe, he would have few at his confessional. The absolution is commonly a more

more serious business; because the penitent must not only testify contrition, but must give fome token of amendment, by abstaining, at least for a season, from the commisfion of the crime which is the subjectmatter of confession. The first absolution may be eafily obtained; but when the offender comes, year after year, with the same confession, if he will obtain absolution, he must change his confessor; and this practice is not only difgraceful, but fometimes ineffectual. Here, then, it is needful to adopt fome new expedient. Two naturally prefent themselves: for, either some priest, destitute of principle, may be found, who, for certain confiderations, will furnish billets; or elfe, which is a prevailing practice at Madrid, the common proftitutes, confeffing and receiving the holy facrament in many churches, and collecting a multitude of billets, either fell, or give them to their friends. I have certificates before me. As these carry neither name nor fignature, they are easily transferred. They are simply thus: Comulgò en la Iglesia parroquial de San Martin de Madrid. Ano de mil setecientos ochenta y feis.

The

The principal cortejos in the great cities are the canons of the cathedrals; but where the military refide, they take their choice, and leave the refuse for the church. In the country villages, the monks bear rule; at least within their limits, and even in the cities, they fet up their pretentions. As for the parochial clergy, one thing is certain, that many of them have families, and all are involved in the common censure. Even in the Asturias, my friend, the good bishop auxiliary of Oviedo, a man of high principle, yet of great humanity, fevere only to himself, but compassionate to others, made it a rule, that none of his curates should have children in their families. This facrifice, at least, he infifted they should make to decency. Beyond this he did not think it right to be too rigid in his enquiries. In fhort, during my refidence in Spain, I never found one person inclined to vindicate the curates from the common charge; but, at the fame time, all, with united voices, bore testimony to the superior virtue of the bi-Indeed, these venerable men, from all that I could hear, and from what I faw in the near approach to which they gracioufly

[151]

outly admitted me, for purity, for piety, for zeal, can never be furficiently admired; but too few of the clergy, either fecular or regular, till they begin to look towards the mitre, feem to think it necessary, that they should imitate these bright examples, or aspire after such high perfections.

This universal depravity of morals, if I am not much mistaken, may be traced up to the celibacy of the clergy. It is true, the example of the court, fince the acceffion of the prefent monarch, has given prevalence to practices which were before restrained, and made that honourable which had been attended with difgrace; but the effect must always, in a measure, have been coeval with its cause. Nay, should we be inclined to blame, in the first instance, the Italians, who are faid to have brought this practice into Spain, we should be obliged at last to trace it up to this mistaken principle, that conjugal affection is inconfistent with the due discharge of the ministerial functions. In conversing freely with the clergy on this subject, I never met any one, besides the archbishop of Toledo, who attempted to vindicate this principle; and where-L 4

wherever I was, I had no difficulty in declaring war against it, because they do not confider it as an article of faith. The principle is abfurd; yet upon it is founded the celibacy of the clergy, and from that, in my opinion, is derived the corruption of their morals. It has been common for protestants, who travel in a catholic country, to inveigh against the clergy, and to laugh at the people, as priest-ridden: fuch abuse is exceedingly illiberal. The priests themselves are to be pitied, but the law which binds them, the cruel law which requires that they should offer violence to nature, or, more properly, the power which can abrogate that law, should bear the

The purpose of the law is however frustrated; for nature is like a rapid river, which, checked in its progress, scorns restraint, and, when diverted from its proper course, either overflows the country, or forms new channels for itself. What then is gained? The parochial clergy, and these are the only clergy who should be suffered in a state, have their connections and their children, but not as they ought, in the most

most honourable way. They are disgraced in the eyes of the people, who are taught by their example to live in the violation of the laws; and their children, for want of a proper education, are fitted only for the vilest employments in the community. How different is the picture, where marriage is allowed. The minister is like the father of his parish, and his wife performs the office of a mother; both fet an example of virtue, and in every village teach the peafants how to value their domestic comfort. In the street, their children, commonly a numerous offspring, are diffinguished by their look of health, by their cleanliness, and by the decency of their conduct; and, when fent out into the world, they form the most valuable members of fociety.

Should the Spanish government resolve to set the clergy free, more ample provision must be made for their maintenance, because at present it is scarcely sufficient for their own support; and this might be easily accomplished out of the vast revenues of the bishops, or by the suppression of some useless convents.

[154]

The play-houses in Madrid are not much frequented: the genius of the people does not affimilate with this fort of amusement. This will evidently appear by the receipts at the two theatres; for, taking the average between them in December, they each produce fifty pounds a night, but some nights less than twenty pounds; and, even in the Christmas week, not more than seventy-fix. They have lately introduced the opera, but with little prospect of success; because most of the genteel people keep to their own societies, except when they attend the balls.

Few people here discover any love for the sciences. The cabinet of natural history is open to all the world, but it is not frequented; and although D. Ant°. Fern. Solano, the royal professor of experimental philosophy, in point of clearness, elegance, and precision, may be reckoned among the first in Europe, and delivers his lectures gratis, yet nobody attends him. Books are little read; all who are not engaged in business, are occupied in their attendance on the ladies, with whom nothing of this kind is heard of.

[155]

In confequence of proper introductions, I had an opportunity of feeing most of the principal mansions in Madrid. The first, without exception, in point of magnificence, is the duke of Alba's: the principal front is to the fouth, and is two hundred feet in length, with eighty-five windows. The eastern and western fronts will be fix hundred feet when finished; yet in this vast pile there is not one room suitable to the rank and fortune of its lord. The upper stories will be occupied by four hundred bed-chambers, which are scarcely sufficient for the family, confidering that all the fuperannuated fervants, with their wives and children, are to be lodged and penfioned there. The duke informed me, that he paid one hundred thousand reals, that is, one thousand pounds, a month, in wages only at Madrid.

For commodiousness and elegance, no house in Madrid is equal to the duke of Berwick's. Built on a declivity, with the principal front towards the west, it occupies, like other Spanish houses, the four sides of a square, yet is perfectly modern, both in style and furniture. You en-

ter a spacious hall, then, ascending a wide staircase, you find a suit of magnificent apartments, communicating all round, and, upon the fame level with the garden to the fouth and to the east. From this circumstance, all the ground floor is kept exceedingly cool for a fummer's refidence, and the principal apartments are warm and comfortable in winter. Such an habitation would be ill fuited for the accommodation of numerous domestics, with their widows and their children, descending by tradition from his ancestors; and therefore the duke, very wifely, is fatisfied with giving them finall penfions, and leaves them to provide a lodging for themselves.

He was so obliging as to let me see his accomptant's offices, in which he has introduced a system of economy little known in Spain. They consist, as usual, of sour departments, but then in these he has only one accomptant general, with three clerks; one principal secretary, with three under him; one treasurer, and one keeper of archives, with an affistant. On all his estates he has similar establishments, but upon a smaller scale. His whole property produces,

duces, gross, one million eight hundred and eighty-eight thousand six hundred and eighty-three reals, and from this deducting three hundred and forty-one thousand nine hundred and eight, for the charge of management, it netts one million sive hundred and forty-six thousand seven hundred and seventy-sive reals, or £.15,467 sterling.

The late duke of Arcos had more than three hundred people in his establishment at Madrid. The marquis of Penasiel, who is married to the young dutchess of Benevente, and is at once duke of Ossuna, of Arcos, of Vejar, of Candia, &c. &c. with an income of about fifty thousand pounds sterling, employed, when I was at Madrid, twenty - nine accomptants, including his two secretaries, and I understand that he has since increased their number; besides these, he has an advocate, and a family physician, for whom, with his principal secretary and his treasurer, he keeps four carriages.

The duke of Medina Cœli has thirty accomptants in Madrid, besides vast establishments on his estates, more especially in Catalonia, most of which belongs to him,

and in the province of Andalusia, where he has extensive property. His son, the marquis de Cogolludo, who has a separate establishment, informed me, that he himself paid, only at Madrid, thirty thousand reals a month, or near sour thousand pounds a year in stipends to his servants.

It is difficult to estimate what, with good management, would be the revenue of these great lords. Such a property as the duke of Alba's, producing under administration eighty thousand pounds a year; what would it not yield, if let out to fubstantial farmers? If, whilst they plough, and fow, and reap, and thrash, and sell, and eat, and drink, upon the duke's account, he receives fuch an income, what would it be if every inch of land were made productive, and if that produce were expended with economy? With fuch vaft possessions, well managed, he might live in folendor little inferior to the greatest fovereigns of Europe. But, instead of this, devoured by their fervants, they are most of them in debt; and, under the feeling of poverty, live exceedingly retired, fcarcely venturing

[159]

venturing at any time to give a dinner to

In many of their houses you find good pictures, collected by their ancestors; but, as for the present generation, they seem to have little tafte for the polite arts: their time and attention appear to be loft in trifles. Among the houses where the works of the best masters are to be seen, the principal are those of Alba, Medina Cœli, Santiago, Infantado, and Santestevan. In the former is a very numerous and inestimable collection; and, among them, the portrait of the present duke, by Mengs; and the great duke of Alba, by Titian; a Venus, by Velazquez; a Holy Family, by Raphael; and the famous School of Love, by Correggio. In this beautiful picture, Venus and Mercury are teaching Cupid to read: it was fold in London, with other valuable pictures of Charles I. All these pictures were, when I faw them, crowded in the old manfion of the family, and therefore appeared to difadvantage; but, whenever they shall be cleaned and properly disposed, this will be evidently a most capital collection. All the other collections are in the highest prefervation. vation, except those of the late duke of Santestevan, now the property of his son-in-law, the marquis of Cogolludo, which, although inestimable, as being the works of the most ancient artists, are wholly neglected, and suffered to decay. The marquis was so polite as to attend me and the Prussian minister to see them, and witnessed our lamentations over them.

During my winter's residence at Madrid, I endeavoured to get some insight into the revenue, and, I trust, it will be sound that my labour was not in vain: yet, after all my enquiries, I am inclined to think, that till some great financier, like Mr. Necker, shall arise in Spain, the confusion which reigns at present will continue to prevail in this department of the state.

Whilft the taxes were collected by farmers general, it was easy to know the rent they paid; but now that all is in administration, to come exactly at the produce and expenditure will be attended with some difficulty. Were the whole peninsula on the same footing, were all punctual in their payments, and were the disbursements from one common treasury, this research would

be expedited; but, as not one of these circumstances exists, we must take the materials as we find them, and do the best we can. I shall endeavour to give some idea both of the revenue and its expenditure, founded on authentic documents, procured from the foreign ministers, and compared with an official paper, with which I was favoured from the treasury. But first, it will be necessary to point out the various articles which yield revenue, and to explain the terms relating to sinance, briefly premising such an historical relation as can be collected from Spanish writers on the subject.

The principal resources of the crown for supporting its dignity, were anciently sound in the demesses of the sovereign; but when, during a minority, or a disputed succession, these had been plundered by the great nobility, he was obliged to solicit grants from the national assemblies. Thus it was with Alonzo II. who, after he had compelled some of his barons to restore the lands taken from himself and from his immediate predecessor during their infancy, finding these unequal to his wants, in the year Vol. II.

1342, he obtained from the cortes, then affembled at Burgos, an alcavala, or tax upon all property transferred, to defray his expences at the fiege of Algeciras. Many cities had given him a fifth on the value of all commodities disposed of by sale or barter, but when granted by the states, the tax was fixed at ten per cent, and made univerfal over Castille. Whilst Peter, furnamed, but perhaps improperly, the Cruel, driven from his kingdom, was a fugitive in France, Henry, his natural brother, having been proclaimed king (A. D. 1361.) the cortes granted the alcavala, without any limitation with respect to time, as a mark of their ftrong attachment to the fovereign of their choice. But neither was this grant, nor the aid of France, sufficient to establish the usurper on the throne; for Peter, powerfully supported by Edward, prince of Wales, at the head of thirty thousand men, gave him battle, and compelled him to retire. When Peter had thus regained his sceptre, he began to meditate revenge against the pope, Urban V. who had excommunicated him. His holinefs, however, readily found means to appeale the indignation indignation of the offended monarch, by granting him the royal thirds, or two-ninths of all the tythes collected in Castille, under pretence of a croisade. Peter took the money, and increased his army, but not with the least intention of strengthening himself against the insidels. He had more formidable enemies at home, and to them he bent his whole attention, but in vain. The prince of Wales having retired in difgust, his father, Edward III. was not inclined to continue his support; when, therefore, Henry appeared in the field once more, attended by most of the principal nobility, Peter fell. This was in the year 1369.

At the commencement of the succeeding century, Henry III. obliged to assume the reins of government, when he was aged fourteen, with a view to prevent a civil war, found his treasury exhausted, and whilst his great barons were rioting over the spoils which they had seized during his minority, he himself was reduced to the last extremity of want. It is related of him, that returning one day from hunting, and asking for something to eat, his stew-

M 2 ard

ard told him plainly, that he had neither money nor credit to procure a joint of meat; "Then," faid he, "take my cloak, and pawn it." He was not, however, fatisfied with venting his indignation in empty words; but, roused by hunger, he compelled his nobles to restore the castles, and to remounce the pensions which the regent had been compelled to grant them.

A. D. 1500, when the wealth of America began to flow into Spain, the internal revenue of the country ceased to be an object of attention, and the ministers of finance looked chiefly to the mines of Peru and Mexico for their fupplies. But before one century had elapfed, the phantom vanished: the treasury, exhausted by incessant wars, had contracted a load of debt, fuch as the country was unable to support; and, to fit out the invincible armada, new taxes were invented, under the denomination of Millones, fo called, because the grant was for eight millions of ducats, (f. 878,906. 5s.) To this the cortes, some years after, added twenty-four millions, to be collected in fix years; of which, four and an half was

[165]

was imposed on falt, the other nineteen and an half on wine, oil, vinegar, and butcher's meat.

The country was not in a condition to be taxed. Rich in mines, but poor in money; exhausted by continued wars in Italy, in Flanders, and by emigrations to America; wanting, at the same time, every encouragement to industry at home; wretchedness so universally prevailed, that Dr. Moncada, in the year 1660, reckoned more than three millions in Spain who wore no shirts, because they could not afford to purchase linen. Money was at that period lent commonly for twenty, and even thirty, per cent. Such was the state of their finance in the reign of Philip IV. His fucceffor, Charles II. who died at the end of the feventeenth century, was once reduced to fuch distress, that, as appears by a letter to be feen in his own hand writing, he folicited money from the council of Castille to pay the expences of his removal with his court to Aranjuez, where he was going for his health: the council answered, that, if upon examination, there was no other

M 3

way to restore his health, they would grant the money.

We may readily imagine that the receipts at the treasury were inconsiderable, when we cast our eye upon their accounts, and, so late as 1714, see them kept in maravedis, of which four are nearly equal to a farthing.

At the beginning of the present century, Philip V. succeeding to the crown of Spain, found only a revenue of ten million livres, or £.416,666, and no money in the treafury; but, in the superior abilities of the president Orry, he had inexhaustible refources. This great man, who accompanied the young prince from France, and became his minister, raised the revenue nearly to two millions sterling; and, at the end of an expensive war, left the treasury not only free from debt, but with considerable sums in bank. In the year 1714 he retired.

Previous to this period, the taxes were farmed, and the people were grievously oppressed, not merely by the farmers general and by their judges, but by others who rented

rented under them. The poor peafants were robbed and plundered with impunity, and when, unable to fatisfy these harpies, they took refuge in a convent, the province was obliged to make up the deficiency. To remedy these abuses, the new monarch thought it expedient to reunite many of the leffer farms; and, to prevent the vexation of his fubjects, he recommended moderation to the farmers. His recommendation remained without effect. The farmers continued to nominate and to pay the judges, the judges continued to opprefs the people, and the people continued to utter their complaints. When, however, the minister reflected that, whilst the taxes continued to be farmed, the people must be fubject to oppression, in the year 1714, he put the whole revenue in administration; but, at the end of two years, he reluctantly confented to renew the farms.

After this short respite, when the galling yoke was laid upon their necks again, and the farmers were once more armed with power to oppress them, the people became impatient, and their clamours reached the throne; yet to little purpose for a season,

M 4 because

because the necessities of the state were pleaded, and whilst Philip lived, the evil complained of was only palliated, but not removed.

A. D. 1746, on the accession of Ferdinand VI. D. Martin de Loynaz undertook to plead with him the cause of a much injured people, as D. Michael de Zavala had done with his father Philip, but with more effect; for his minister, the marquis de la Ensenada, wholly abolished the farms; and from that period they have never been restored. In consequence of this new regulation, the magistrates of all the cities and districts in the twenty-two provinces of Castille, administer the provincial rents, and remit the produce to Madrid, receiving six per cent. for their trouble in collecting.

To reduce the subject of taxation to a system, we might divide and subdivide, till our attention should be lost in classes, orders, genera, species, and varieties, but as this, in the present case, would not in the least contribute to clearness and precision, I choose rather to adopt an alphabetical arrangement.

Annats, called Medias Annatas, is a tax

of half a year's revenue from the grandees and titular nobility on coming to their estates, or fucceeding to any office. The marquis de Squilace was fond of this refource, and, fince his time, near one thoufand titles have been given. From the clergy, the fovereigns of Spain received no annats, excepting only in America, and in the conquered provinces, till the concordat, A. D. 1753, between Lambertini and Ferdinand VI; but fince that time they are no longer fent to Rome. With these are included the ecclefiaftical months, being onetwelfth of all benefices under three hundred ducats, or f. 33 nearly, and this rated according to the ancient valuation. Since these grants, the pope, A. D. 1783, gave to the king one-third of all fimple benefices, which are worth more than two hundred ducats per annum.

Aposento, or Casa de Aposento. When Philip V. succeeded to the throne, his intention was to have made Seville the seat of his dominion; but the citizens of Madrid prevailed upon him to change this resolution, by offering him a sum of money, on condition that he should continue with them.

[170]

This was afterwards changed for a rentcharge on all the houses, with liberty of one-third redemption at twenty-five years purchase.

Brandy is one of the royal monopolies. The king takes one-eighth of all the spirits as a tax, the rest he claims a right to purchase, paying for brandy twenty-two reals the arroba of twenty-eight pounds, and for spirit of wine, twenty-eight reals; the some he sells at sixty-four reals, the latter at one hundred. At this rate Madrid consumes ninety thousand arrobas, or about sive thousand hogsheads of brandy, besides eighteen thousand arrobas of spirit of wine. The cities agree upon a composition for these duties.

Cards are another of the royal mono-

Catalonia and Arragon. Under this article is comprehended the catastro of Catalonia with the equivalent for Arragon, Valencia, and Majorca.

Grusades. The bull of the crusades grants the same indulgences as were usually dispensed by the popes to those who went to make a conquest of the Holy Land, extending these in the first instance to those

[171]

who should personally make war upon the infidels; in the second, to those who should send a deputy; and, in the last place, to such as should aid, by liberal contributions, the soldiers engaged in this holy war.

The indulgences are,

1°, To eat flesh on fast-days, with the confent of their physician and confessor, and, even without their consent, to

take eggs and milk.

2°, That, for every day they fast voluntarily, and pray for union among christian princes, with victory against the infidels, they shall be excused fifteen years and fifteen forty hours of penance imposed upon, or in any manner due from them; and moreover, shall partake of all the prayers, alms, pilgrimages, even to Jerusalem, which shall be performed by the church-militant, or by any of its members.

3°, That, vifiting five altars, or five times one altar, and praying as above, they shall obtain plenary indulgences for themselves, or for any of their departed friends, in whose favour they

shall perform this.

4°. That, once in life, and once at the time of their decease, they may obtain from their confessor remission, even of those fins referved for the pope, excepting herefy, and of other fins, as often as they confess.

5°, That, dying fuddenly without confession, they shall obtain the same plenary indulgence as if they died under con-

trition.

6°. That, vifiting five altars, and praying as above, on the days specified in the calendar, of which there are eleven, they may, by their prayers, for each day, deliver a foul from purgatory.

7°, That, paying for two copies of the bull, a person may twice in one year enjoy all the indulgences, favours, and privileges mentioned above, and gain double the benefit he might claim

on having purchased one.

For this bull the nobles pay about fix shillings and four pence, the commons about two shillings and two pence in Arragon, but fomething less in the kingdom of Castille. Even the servants purchase these; and fuch is the demand, that they are reck-

[173]

per annum. No confessor will grant absolution to any one who has not this bull.

The effects of the camera arise from vacant benefices. By the concordat, A. D. 1753, the kings of Spain enjoy not only the nomination to all ecclefiastical preferments, which formerly was in the popes, but they take the benefit of vacancies, and seize the spoils of the prelates, that is, their moveables, together with the effects of all clergymen dying intestate. These are called espolios y vacantes.

ehoofes the best farm, whether for olives, corn, or vines, of which he takes the tythes both in Castille and Arragon. The clergy formerly agreed with him for this, but afterwards it was farmed by the gremios, or five united companies of Madrid, at twelve millions of reals; but, in the year 1778, the clergy had the grant at one third less. Most of them accepted the offer; but they, who thought themselves too poor to venture, refused, and these farms are let to the gremios at four millions. The gremios have

been

been accused of having availed themselves of this bargain, to purchase corn in all the country villages when it is cheap, to lodge it in their granaries, and then, selling it out again at a high price, to starve the people, and enrich themselves.

Extraordinary effects arise from seizures; from licenses to export goods in the register ships; and from the duty on the exportation of money. The amount is stated only at thirty-five millions; but sometimes it has been a hundred. This properly should go to the aduana, or custom-house.

Fines of the camera are levied by the council of the Castille on magistrates transgressing.

The Indian revenue will be confidered by itself. It amounts, in America, to near four millions and an half sterling; but although variously stated in the subsequent schedule as productive of revenue, it is doubted whether it yields a profit, or becomes a loss to Spain.

Lances. This tax is paid in lieu of military service, and is, for dukes, counts, and marquisses, two hundred ducats, or about £.22 for each title; but a grandee pays eight thousand reals. It is stilled, Pecuniaris compensatio pro hastatis militibus.

Lead is a royal monopoly, and must be

most uncertain in its produce.

Manufactures of cloth and glass are stated as yielding a revenue. The glass is made at S. Ildesonso, and is chiefly for mirrors, because the glass for common use is imported into Spain. It is to be feared, that neither the glass, nor yet the cloth, yield any profit to the nation. It is impossible they should.

The masterships of the three orders of Calatrava, Alcantara, and of S. Iago, were granted by the pope to Ferdinand and Isabella, and settled in perpetuity on the sovereigns of Spain by Adrian, to express his gratitude to Charles for having raised him to the papacy.

The notaries, each pay two hundred du-

cats on his admission.

The pasture of the masterships arises from extensive meadows belonging to the three great orders: and the pasture of the serena is from a tract of country in Estremadura, formerly considerable, but, from the frequent grants made by the crown to the

great nobility, now fo far reduced as to yield only about five and twenty hundred pounds of our money; whereas, fo late as the year 1722, Uztariz states the value at more than two millions and an half of reals, or about twenty-fix thousand pounds per annum.

Posts and Couriers. These were formerly the private property of the counts d'Onate, grandees of Spain, but they now form one of the most valuable branches of revenue to the state. Mr. Wall established a regular post to America; but, before his time, the Spanish ambassador to the English court was instructed to procure, at London, information of all that was passing in Spanish America, and to transmit that information to his court.

The Propios and Arbitrios. Cities formerly levied taxes on waste lands granted to private people, and on provisions, for the expence of their municipal government; but the king now takes two per cent. on the produce, for general use.

General Rents are the duties levied in the

fea-ports.

The Provincial Rents are, 1°, the Alcavalas of ten per cent. on every thing fold or bartered,

tered, whether used in husbandry or manufactures, to be paid every time the property is transferred; together with four per cent. laid on, at subsequent periods, to the original tax. 2°, Millones, granted by the cortes, A. D. 1601, for fix years, but ever fince collected, being eight maravedis, or about a halfpenny a pound for butchers meat and fuet fold in the market; and eight reals for every carcase, whether brought to market, or killed for the use of private families. Under this grant, wine, vinegar, and oil, pay one-eighth on the price, estimating wine at fixty-four maravedis the arroba, vinegar thirty-two, and oil at fifty. 3°, Fiel medidor, which is another duty on wine, vinegar, and oil, of four maravedis the arroba, granted A. D. 1642. 4°, The royal thirds, or three ninths of the tithes, first granted to the Spanish monarchs, A. D. 1274. 5°, The ordinary and extraordinary service, granted A. D. 1580; a tax on every thing belonging to those who are not noble, that is, hidalgos, or knights. Ecclefiastics being free from the alcavala, the millones, and all municipal taxes, called arbitrios, they are refunded every year according to their con-VOL. II. fumption.

fumption. All these provincial rents, in the year 1778, produced one hundred and thirty millions of reals; yet, so late as the year 1745, they were farmed at ninety millions.

Rents of Madrid, called also Efectos y sifas de Madrid, and Rentas de arrendamiento, are the produce of the alcavala and millones of that city, and of five leagues round, farmed by the gremios.

Patrimonial rents arise from thirds, tithes, referved rents, and lands let to farm, in Catalonia, Arragon, Valencia, and Majorca.

Rent of the priory of S. Juan, or S. John, is mentioned only by Ustariz, because it was afterwards granted to the infant Don Gabriel.

The falt-works yield a confiderable revenue. These were formerly considered as private property; but, in the year 1348, they were taken by Alonso II; and, in 1564, Philip II. seized them as a part of his demesne. The chief of them are in Andalusia, Valencia, Catalonia, and Majorca. The salt-works of Mata, in the kingdom of Valencia, would easily furnish one million and an half sanegas, of about one hundred pounds

pounds weight, which, could they find a market, would, at twenty-two reals the fanega, make three hundred and thirty thou-fand pounds sterling per annum; but, by raising the price, they have lessened the demand: so that the whole amount of the kingdom is only about two thirds of what one work alone might furnish.

Stamp-duties were introduced in 1637.

Subfidy is one per cent. granted by the pope to the kings of Spain, upon all eccle-fiaftical rents in their dominions, for the war against the infidels.

Saltpetre, fulphur, and gun-powder, fealing wax, quickfilver, and tobacco, are all royal monopolies. Of the latter I shall speak more particularly, when I come to treat of Seville. It was granted by the cortes, A. D. 1336.

Wool. In the year 1437, a tax was imposed on all wool in general, called Servicio y montazgo; but, to encourage the production, this was changed by Ferdinand VI. into a duty on fine wool exported. The coarse wool is kept at home.

In my schedule, the Indian revenue is stated by Uztariz at forty millions; and by count de Grepi, the imperial consul, at

N 2

more

more than ten times as much. The former means the nett produce; the latter takes the gross amount. Mr. Liston's average of ten years agrees nearly with Uztariz; but Mr. Carmichael, the American envoy, states fixty millions. The fact, however, is, if we may believe those who are the best informed, that the Spanish colonies yield no direct revenue to the mother country. This being the case, I cannot conceive upon what authority, the Abbé Raynal states the clear revenue from America at thirty-four millions five hundred thousand livres, or, in reals vellon, at one hundred thirty-eight millions clear, besides eighty-two millions three hundred thirty-feven thousand eight hundred reals paid for duties in Europe.

Count de Grepi states the revenue in

America as follows:

Customs on European commodities, according to the years 1785 and 1786, - 42,240,000
Alcavala on ditto, introduced
A. D. 1591, - 54,120,000
Tobacco rent in New Spain and other provinces, introduced A. D. 1752, - 100,000,000
Duties

Duties on gold and filver ex.
ported, 60,000,000
Tribute of the Indians, - 40,000,000
Crufades, introduced A. D.
1509, 20,000,000
Quickfilver fold, 6,000,000
Stamp-duties, introduced A.D.
1641, 20,000,000
Coinage, 6,000,000
Acapulco trade, ~ 10,000,000
Sale of the herb Mathé, 10,000,000
Sale of paper on the king's
account, 10,000,000
Rents of the Jesuits, 8,000,000
Cards, and other monopolies, 6,000,000
Rents of the Philippines, - 30,000,000
Tax on negroes, 4,000,000
R' vellon 426,360,000

The alcavalas on American productions are omitted, as are also some other taxes, of which the count was not able to procure any information.

The following schedule will shew the produce of the taxes in the royal treasury. To reduce the reals to pounds sterling, drop the two last figures, because one pound is equal to one hundred reals vellon.

[185]

I procured from the foreign ministers various statements of the expenditure, such as they transmitted to their several courts, but the one with which I was most satisfied, I had from D. Estevan Zienowiess, ambassador from Russia, confirmed by that of Mr. Liston, our own minister, on whose accuracy I could depend.

EXPENDITURE. 1778.

In the preceding estimate, the china manufacture at the Buen Retiro is made debtor only four hundred and thirty-fix thousand one hundred and eighty - eight reals: but, from the extent of the concern, and from a more minute account received from Mr. Carmichael, I am inclined to think that one million has been inadvertently omitted: it would then stand one million four hundred and thirty-fix thoufand one hundred and eighty-eight reals. Besides this mistake, if it be one, the expence of the glass manufacture is here overlooked, which Mr. Carmichael states at one million one hundred and thirty-fix thousand eight hundred and eighty-four; and the loss by the cloth manufactures. which is not stated. Yet, in the government returns, the manufactures of glass and cloth are reported to yield, on the average of ten years, fix million two hundred and thirteen thousand fix hundred and eightyfix reals profit.

From an attentive examination of all that I have been able to collect, I am perfuaded that the revenue has not for many years been equal to the expenditure; and whilft

I was at Oviedo, in the year 1786, the minister of the finance, in his circular letter sent through all the provinces, urged the collectors to diligence and strict attention in the collection of the taxes, because the expences of government were forty millions of reals more than the revenue. Since I quitted Spain, the revenue is increased, and from good authority I understand, that the last statement of Mr. Eden is five hundred millions, or five millions British, and that now they have a surplus of revenue to discharge former debts.

The debts are of various kinds; fome of ancient date, others more recent. For the payment of the former, with the stipulated interest, the provincial rents were appointed as security; but these are kept out of sight, because the nett produce is brought forward in the accompts, after deducting the juros, or interest upon money borrowed. These debts were contracted upon great emergencies, and the money was advanced chiefly by the Genoese, the gremios, and by the rich nobility. These have often been transferred in moments of despair, at a considerable discount, and much has been

been redeemed, paying those proprietors, who made the most advantageous offers to the state, and were willing to part with their interest in the debt on the lowest terms.

The fecond class of public debts are those contracted by the emperor Charles V. in his rash wars These amounted, according to the abbé Raynal, to one thousand million of livres tournois; which, at twenty-four livres to the pound, is £.41,666,666. But the interest of this being then more than the whole revenue, the state, in the year 1688, became bankrupt.

At the death of Charles II. and the acceffion of a new family, public credit was restored; and, in less than half a century, Philip V. availing himself of this reviving considence, contracted fresh engagements, to the amount of near seven millions sterling. His successor, Ferdinand VI. consulted the most learned casuists in his empire upon this question, whether a sovereign is bound to pay the debts of the preceding monarch? This simple question was solemnly determined in the negative. It being therefore settled, that the king should

fhould not discharge these engagements, Ferdinand accumulated treasure, and left his coffers well replenished. Charles III. found, according to the abbé Raynal, one hundred and sixty million of livres in his treasure on his accession, and formed the pious resolution of paying all his sather's debts; but when he had expended half this sum, he consumed the remaining part in fruitless wars.

Thus matters stood till the Spaniards entered into the last war for the emancipation of America; when, feeling distress for want of money, the minister thought of trying how far he could avail himself of paper credit; an expedient little fuited to the genius of a despotic government, and least of all to one which had never shewn regard to public faith. He began with iffuing nine million of dollars, in fifteen thousand notes of fix hundred dollars each, bearing interest at four per cent. Of this transaction I shall have occasion to speak further, when I come to treat of the new bank, which has fo far restored the credit of this paper, that, from being at twenty-four per cent. difcount, it now bears a premium.

Govern-

Government avows the emission of twenty-eight million seven hundred and ninety-nine thousand nine hundred dollars, at three several periods during the war; but professes to have withdrawn one million two hundred thousand; so that, estimating the dollar at three shillings, the whole of this debt is £.4,139,985, and the annual interest of this £.165,599, a trisling incumbrance, when compared to the debts of France and England. The juros are not here to be carried to the account, because they are deducted out of the gross produce of the revenue, and the amount I have stated is only what it clears.

All good Spaniards have exclaimed against the operation of their taxes; and, in consequence of these expostulations, as far as relates to foreign trade, government has so regulated the customs upon imports and exports, upon goods manufactured, and upon raw materials, as to encourage home productions; but then the alcavalas and millones operate so powerfully against these provisions, that the manufacturer cannot lift up his head, nor stand the competition

with nations who are bleffed with a wifer fystem of finance.

The alcavala, with its four cientos, is a tax of fourteen per cent. on every thing that is fold or bartered, even for oxen and mules used in husbandry, for the raw materials used in manufactures, and for the commodity itself when sold, and this not once for all, but as often as the property is transferred. Were this tax collected with rigour, it would create either a general stagnation or resistance, and, perhaps, some effectual remedy against it.

The operation of the millones is not more favourable to manufactures. This tax may be confidered as an additional alcavala, under another name, confined wholly to provifions, and is collected with fuch rigour, that even private families are obliged to pay eight reals, or 15. 7 d. for every sheep or pig killed upon their own estate, and destined for their own consumption.

When the marquis de la Ensenada, prime minister to Ferdinand VI. turned his attention to this business, he saw clearly that Spain could never rise up into consideration under the pressure of such taxes, and therefore

therefore he conceived the idea of substituting in their place one contribution, to be fettled according to every man's ability, the whole amount being equivalent to the fum antecedently collected. For this purpose he established a commission of thirty thousand persons, to make the proper investigations, and to carry his purpose into execution. Before he could accomplish this arduous undertaking, his master died, Charles III. fucceeded to the throne, and he was permitted to retire. His fuccessor, a man of fingular abilities, never lost fight of fo excellent a plan. This was the marquis of Squilace, who, having ferved with the king in Italy as commissary general, attended him to Spain, became his minister, and, by his intrigues, foon contrived that every power in the state should centre in himself. This extraordinary man has been accused of rapacity; but, however that may be, certain it is, that Spain, had he continued in office, would have had abundant reason to admire the wisdom of his government. To him the people of Madrid are indebted, not only for the cleanliness of its streets, but for their fafety from affaffins, because VOL. IL he

he made them lay afide their capa and their flouched hats, by which both their persons and their purposes had been effectually concealed. This innovation, however excellent, this violence offered to deep rooted prejudices, excited indignation; and, being accompanied by an accidental fcarcity of corn, raifed a storm which nothing but his difgrace was able to allay. The fovereign himself felt the shock upon his throne, and fled with his favourite, but was foon prevailed upon to return, and to shew himself to his enraged people from the balcony, where the venerable count of Revillagigedo, viceroy of Mexico, on whose word they could depend, affured them that the object of their refentment was dismissed, and would never more return. The ftorm fubfided; Squilace retired to Italy; and thus, in one moment of popular frenzy, all his well digested plans for the reformation of the finance, the encouragement of manufactures, and the renovation of the empire, were rendered ineffectual, and vanished with himfelf.

The commissioners who were appointed to take the va'u: of all the land, industry, and

and commerce of the twenty-two provinces comprehended in the kingdom of Castille, after having made a deduction of one-third for accidents, estimated the remainder at two thousand one hundred and fifty-two millions one hundred and fiftyfeven thousand three hundred and fixtyfour reals vellon, or a little more than one and twenty millions and an half sterling. Then having calculated the average of the provincial rents at one hundred and thirtynine millions reals vellon, or f. 1,390,000; to raise an equivalent for this sum, it was found necessary to impose 6 15 per cent. on lands, houses, industry, and commerce, including physicians, comedians, musicians, fervants, labourers, and artists, not excepting the clergy, who are stated as possessing two-fifths of all the cultivated land. For this purpose an edict was published in the year 1770; but unfortunately, like fome others, it remained without effect. One provision in this edict shewed the wisdom of the head that formed it; for it was ordained that fertile land, although uncultivated, should pay the tax.

We have feen, that the paper money

iffued by government was depreciated to twenty-four per cent, when M. Cabarrus, by the institution of a national bank, restored the public credit, and saved the country. This gentleman is distinguished for singular abilities, for a clear head, and for a ready elocution. I have already related on what occasion I had first the happiness of meeting him. He did me then the honour to take notice of me, and ever after admitted me when he had leisure to entertain his friends.

The bank of S. Carlos is too fingular in its history to be passed by in silence. It met with rough usage in its beginning, but the indefatigable application of the projector, supported by the good sense of count Florida Blanca, overcame all difficulties, and established it on a firm foundation, if we may call that firm which the breath of a weak monarch, or one stroke of the pen of a wicked minister, can overthrow. At the first institution of the bank, it confifted of one hundred and fifty thoufand shares, at two thousand reals each, constituting a capital of three millions sterling, with liberty to add annually three thousand betifut

[197]

thousand shares, for thirty years, in order that there might not be one citizen of the Spanish empire excluded from this beneficial enterprize.

To create a confidence in the public, the directors were not to enter into any speculation, except where the king should give them a commission, for foreign and distant commerce, or to favour the agriculture and manufactures of the kingdom; and to remove all occasion of jealousy, the bank was to have no exclusive privilege, nor any monopoly; they were to receive at par, and thereby to procure circulation for the government paper, even at a time when it was from twenty to twenty-four per cent discount.

By way of recompence, or, as it was called, equivalency, they were to make all contracts for the feeding and clothing of the army, and for the fupply of the navy, receiving ten per cent. commission for their trouble, and four cent. per annum for all the money they should advance; this grant was for twenty years. Beside this, they were to have the extraction, or the exclusive privilege of exporting specie, collect-

ing ing

ing from the merchant four per cent. for the use of government, and three for the bank. They were to have one per cent, on all remittances from the court of Madrid to its ministers in foreign parts, and four per cent. for discounting bills. No entail was to be valid against the demands of the bank.

Notwithstanding such encouragements, the Spaniards had no confidence in this new establishment, but either locked up their money in strong chests, or solicited the gremios to take it in at two per cent.; whilst in France and Switzerland, monied men came into the scheme with such avidity, that actions bore a premium of three hundred per cent. till suddenly a panic seized them, and the whole sabric was in danger of instant ruin and destruction.

To regain their confidence, the bank bought in many actions, and lent money at four per cent. to the stockholders on the security of their actions, engaging at the same time to pay them their dividend of seven per cent. or more, if it should be due. This strange manœuvre had the desired effect; for the proprietors in Paris, borrow-

ing

ing money of the bank to the amount of twenty millions of reals, for which they were charged only four, whilst, without any risk, they received nine per cent. their former eagerness returned, and the demand for actions was every where renewed.

It cannot be imagined that the bank long persevered in this strange practice. Such conduct must soon have stript them of their capital; because every proprietor would have borrowed money to the full value of his actions, and the bank would have been annihilated. Therefore, at the fourth general meeting it was resolved, that no more than five hundred reals should be advanced on one action of two thousand.

The prosperous condition of this new establishment will appear from a statement of its annual gains.

A.D.	Dille 2000		Reals vellon.	M*.

By this statement it appears, that, 1st, The credit of the bank procured a ready circulation for the government paper; because the interest of that proportion, which, during the course of the year, was in the possession fession of the bank, sunk from more than three millions and an half to less than one million.

- 2^d, The discounting business increased to nearly double in the space of twelve months.
- 3^d, The interest for money advanced on actions, shews clearly, that the proprietors of one-fifth part of the whole capital had withdrawn their proportion; willing at the same time to take their chance for a dividend, at the sole risk of those, who, from rashness, from folly, or from inattention, neglected to follow their example.

4th, The extraction or exportation of specie sunk considerably. It was naturally to be expected that this should be the case. Previous to the institution of the bank, when government permitted the exportation of specie, it was under a duty of sour per cent. the average produce of which was about three millions of reals; but when it became the interest of the bank to watch the sinuggler, the duties rose to sixteen millions. Merchants, however, when one road is stopped, exert their sagacity to find out some other; and, where such a commodity

modity as filver is in question, they easily furmount the obstacles opposed to its exportation.

5th, One fource of profit, producing more than five millions and an half in the year 1785, is, in the subsequent year, dried up. This matter requires to be explained.

The government being much distressed for money, had, as all spendthrifts are forced to do, borrowed on very difadvantageous terms, and then repented of the hard conditions to which it had confented. The commission of ten per cent. appeared exorbitant; and the youchers produced by the directors of the bank, for the articles they had purchased on account of the army and the navy, were not fatisfactory to the minifter of the finance. Besides these objections, the exhausted treasury was not in a condition to discharge its most reasonable obligations to the bank, and to pay those arrears which itself acknowledged to be just. All was in confusion; the minister continued muttering his threats, and the projector of the bank was loud in his expostulations. The latter fuggested, with great propriety, that, in a country where justice and the laws

were

were filent, and where arbitrary power prevailed, the minister might for once plunder and feize, with a strong hand, the whole of their capital; but that, in fuch a case, he must not expect to be trusted a second time, and must therefore renounce for ever the idea of a bank. This argument was felt; and the minister determined, that the bank should have the contract for the army and the navy at the same prices as had been last given to the gremios, and that this new regulation should have a retrospect. The bargain was thus made more advantageous for the public; but how far this transaction was agreeable to justice it was for the minister of the finance to fay.

The gremios, or the five incorporated companies of Madrid, have a joint capital, as factors, to purchase all commodities, and sell to the retail dealers; the manufacturers being prohibited by law to sell by retail. This body, with a considerable capital of its own, and borrowing as much as it could employ at two per cent. had all the contracts for the court, for the presidios, and for the army, both for food and clothing; but since the establishment of the bank, this monopoly has shifted hands; and government, instead

instead of availing itself of the competition between the gremios and the bank, has delivered itself up to the latter, for the advancement of its credit.

But, as it would not be sufficient to grant beneficial contracts, without sulfilling its engagements, government agreed to give an affignment of the sour per cent. duties on the extraction of silver for three years, unless the arrears to the bank should be previously discharged.

Upon coming thus to a mutual understanding, the directors of the bank agreed to advance money for making a canal from Guadarama, at the foot of the Sierra, which divides the two Castilles, to Seville, and to superintend the work, receiving ten per cent. commission, and four per cent. per annum, for all the money they should expend.

I might proceed to give some idea of the Philippine company, in which the bank has engaged two hundred and ten thousand pounds sterling, as I have already stated; but this I shall reserve till I come to Cadiz, when I shall have occasion to treat of commerce, and more especially of the trade carried on between the mother country and its colonies.

[207]

The population of Spain may now be afcertained, if we may depend on the recent returns to government. By these it appears, that the whole amounted, in the year 1787, to ten millions two hundred and fixty-eight thousand one hundred and fifty souls.

1_			-	-						

Such are the last returns to government; and, as in the year 1770, the population, by the same authority, was stated to be nine millions three hundred and feven thousand eight hundred and three, we might hastily conclude that Spain, in the course of seventeen years, had increased nearly one million of inhabitants. In like manner, observing, A. D. 1723, the number of fouls to be feven millions fix hundred and twenty-five thousand, we might infer, that fince that period she was advanced in population more than two millions and an half. But the fact is, that the returns to government are not always just; and Ustariz assures us, that the people, to lessen their contributions of men and money, conceal their numbers, and make false returns. He detected many which were a fifth, and fome one half, below the truth.

Now, if from the number above stated as the population of A. D. 1787, we deduct three hundred and fifty-eight thousand two hundred and fixty-four, these being out of the peninsula, and inhabiting either the islands or the coast of Africa, we shall have for the remainder nine millions nine hundred

hundred and nine thousand eight hundred and eighty-fix; and if we allow the area of Spain to be one hundred and forty-eight thousand four hundred and forty-eight fquare miles, we shall find fixty-seven perfons nearly to a mile. This, if compared with the Ruffian empire, is respectable; but if with France, is below mediocrity. In the former they reckon five to a fquare mile; in the latter, one hundred and fiftyfeven. England comes in between France and Spain; but Spain, if properly cultivated and well governed, might be the first in Europe, not excepting Holland, which to its wife and equitable laws is indebted for a population amounting to two hundred and feventy-two on a mile square. (vide Necker and Zimmermann.)

All are agreed that Spain, in more diftant periods, was much better peopled than at prefent; and many have attempted to affign the cause of its depopulation; but as they commonly fix on one, and seldom think of more than two or three among those causes that are most obvious, it may be useful to trace the various circumstances, which have contributed to depress this

P 2 .

once powerful nation, and to desolate, at least comparatively, one of the richest countries in Europe.

1st, In the year 1347, the plague broke out with more than common virulence at Almeria, and, during three years continuance, ravaged Spain to fuch an extent, that many cities were left almost without inhabitants; and throughout the whole peninfula the population was reduced to onethird of what it had been previous to that event. Of this plague Alfonso XI. died. whilst conducting the siege against Gibraltar. (Campomanes Industria popular, p. 168. Ponz Viage, tom 8, cap. 5. fect. 60.) Subfequent to this, the country has frequently been laid waste by pestilential fevers, introduced from Africa, or dating their origin from fome preceding famine. A. D. 1649, more than two hundred thoufand perished in the southern provinces; and scarcely ever is that part of the country free from putrid, intermittent, and contagious fevers. Such a vast extent of territory as this peninfula contains, without communication either by canals or roads, divided into a multitude of independent kingdoms,

kingdoms, or, at a subsequent period, into provinces, each exacting heavy duties on the introduction of grain, must often have felt diftress for want of bread. In fact, one province has been reduced to the extremity of famine, whilst others have been ruined by abundance. In Seville, A. D. 1652, wheat fold for 15s. 3d. the bufhel; and A. D. 1657, fo low as 13. 4d. It was not till the year 1752, that by a wife regulation of the marquis de la Ensenada, corn was permitted to pass freely, even in Spanish vessels, from one province to another. (Camp. Educ. pop. Ap. part ii. p. 16.) The consequence of famine, as it is well known, is pestilence.

The common diet of the country predifposes the inhabitants to receive infection; and the practice of physicians, in prescribing venesection indiscriminately to all their patients, tends only to increase the evil.

From all these concurring circumstances, few countries have suffained such losses by epidemical diseases, few have been so often ravaged by pestilential severs.

2d, For more than seven centuries, from the year 714 to 1492, Spain was har-P 3 assed affed by almost incessant struggles between warlike nations, in the heart of that divided country, contending for dominion; till the marriage of Ferdinand with Isabella had united the two crowns of Castille and Arragon, and the conquest of Granada put a period to the empire of the Moors.

3d, A. D. 1493, Columbus opened a new channel for their ambition, and gave beginning to endless emigrations, by the discovery of America.

Previous to this, the nobility were mostly resident on their estates, and when not engaged in war, gave themselves up to the management of their own concerns. Without accumulating treasures, many were able to conduct five or fix thousand foldiers to the field; but when they had feen the gold and filver of Peru and Mexico, they became restless and impatient to obtain employments in those countries, and neglected the flower, yet more certain, means of obtaining wealth, by the improvement of their lands. The people in like manner hastened to America in such numbers, that the maritime provinces fuffered feverely by the lofs.

Emigrations,

Emigrations, if regular and in due proportion, neither weaken the parent state, nor sensibly diminish the remaining stock; but when they are sudden, and carried beyond certain bounds, they tend to weakness and to desolation. The former may be observed in the highlands of Scotland, in Switzerland, and in many parts of Germany; the latter was visible on the first discovery of America, and has ever since been selt. (vide Osorio discurso universal; addressed to Charles II. A. D. 1686.)

4th, From the accession of Charles I. of Spain, but the Vth of Germany, (A. D. 1506) the nation was engaged in war, with short intervals, for more than two centuries, thereby exhausting the treasures of America, and wasting the blood of its most adventurous subjects, in Italy, in Germany, in Flanders, and in France, only to gratify the vanity of its sovereigns, and to extend the bounds of their unjust dominion.

The loss sustained, both of men and money, in these idle projects, could not easily be reckoned; yet one truth was evident, that the empire became weak in pro-

P 4 portion

portion to its vast extent. At war succesfively with all the powers of Europe, Spain enriched her enemies, and became poor herfelf; because, wherever she displayed her banners, she dispersed her treasures, and after the most splendid victories never failed to find herfelf exhaufted of her strength. At the end of the first centuries subsequent to the acquisition of America, she was reduced to the fad necessity of debasing her coin, and so low in credit, that she gave more than thirty per cent. for money. This we have on the authority of the university of Toledo, as quoted by count Campomanes in his Educacion popular.

5th, The cause commonly assigned for the depopulation of the country, is the expulsion of the Moors, (A. D. 1613) and to this may be added the previous expulsion of the Jews, to the number of eight hundred thousand, by Ferdinand and Isabella, in token of their gratitude to heaven for the conquest of Granada. This wound was grievous; but, before the nation had recovered strength, to banish nine hundred thousand of its most industrious subjects,

[217]

was fuch a stroke, that to the present day it is feverely felt. Under the best government, with the most propitious circumstances, it would require ages to retrieve fo great a lofs.

6th, Confequent to the expulsion of the Moors, their repeated and almost incessant depredations along the whole extent of coast washed by the waters of the Mediterranean Sea, rendered the most fertile parts of Spain unfafe, and the produce exceedingly precarious. Government has recently fettled a treaty with the Algerines; and in that, according to the opinion of count Campomanes, the ministers have shewn more difcretion than when they attempted to destroy that nest of pirates. His judgment is founded on this maxim, divide et impera: support the Algerines, that you may weaken the empire of Morocco.

7th, Among the defolating causes, must be reckoned their change of government, not on account of the blood of their best citizens, shed in the doubtful conslict, for that loss in time might be retrieved, but from the unremitted operation of a bad government. It must be confessed, that

under

under despotism may accidentally be found wisdom and equity, with wealth and power; but, since the loss of liberty, these have not been seen in Spain. In national assemblies, able leaders may arise to represent their grievances, and to seek redress. Had Spain enjoyed her cortes after light was disfused in Europe, when citizens began to ascertain their rights, and to shake off the chains of feodal tyranny, she would not so long have groaned under oppression.

Although fome grievances, fince the representation of count Campomanes, have been redressed, yet, by their long continuance, they tended to desolate the country, and therefore well deserve to be recorded. I shall select the most remarkable, and support them by quotations from his inestimable works. These relate to the revenue, the army, and the police.

No country ever invented a more ruinous system of finance, or one less friendly to manufactures and to commerce. The alcavala, with its cientos, being a tax of fourteen per cent. on all commodities, both on the raw materials, and on the same when manufactured, as often as the property perty changes hands, rated, not according to the prime cost, but to the selling price, and therefore constantly increasing, is almost sufficient of itself to create a general stagnation. This effect is evident in Castille, whilst in Catalonia and in the provinces of Arragon, where Philip V. exchanged this oppressive tax for the equivalent, industry prevails, and manufactures flourish. The millones, being a tax upon provisions, tends to increase the price of labor, and thereby indirectly proves an obstacle to foreign commerce.

With fuch powerful inducements to defraud the revenue, to what innumerable vexations must the manufacturers and merchants have been subjected by government, more especially when the revenue was let to farmers, who, with their servants, were an hundred thousand. These watchful harpies were authorized to place their spies at the door of every shop, to examine the tradesman's books, to put their seal on his commodities, to demand the testimony of those who were sent to purchase, with the attestation of the purchaser himself, and to require certificates from those on whom the commodity was found. (vide Camp. E. P. Ap. iv. p. 244.) The farmers of the taxes were originally Jews; but the wealth to be acquired by plunder made the employment honourable. Their misconduct called loudly for redress, and this grievance is no longer found in Spain. But what shall we say! should a more enlightened nation, boasting of freedom, submit to similar oppressions?

That the vexations specified tended to depopulate the country must be evident: that they produced this effect, Oforio, as quoted by count Campomanes, affures us in his discourse on the grievances under which the nation laboured. He afferts. that in the villages, not one-third of the houses had escaped the rapacity of those who farmed the taxes; because, when nothing else remained to the miserable peafants, these merciless exactors seized their houses, and fold the materials to the first who was inclined to purchase. This cause of depopulation was not removed till the year 1749. (vide Camp. E. P. Ap. i. p. attalarion of the purchaser himself a 147.

Among a great variety of causes pro-

ducing this effect, and itself the genuine offspring of bad government, is the want of a free market. Under the idea of preventing imposition, the magistrate authorized to intervene between the buyer and the feller fixed the price of all commodities, even of corn and manufactures, to the destruction of agriculture, and to the difcouragement of industry. This evil, introduced by Philip II. was confined to the kingdom of Castille; and, consequently the provinces of Catalonia, Arragon, and Valencia, being free, were both more populous and better cultivated than it, although their foil, excepting Valencia, is far from rich. (v. Camp. E. P. Ap. i. p. 418.). As to manufactures, it was in the reign of Alonzo el Sabio, A. D. 1256, that the magistrates first interfered to fix the price, and this they did without regarding the goodness of the materials or the value of the work. The confequence of fuch a regulation is obvious. (v. Camp. E. P. Ap. iv. p. 64.).

With the intention of rendering provifions cheap, government, till the year 1765, prohibited the exportation of grain. For the honour of Spain we may observe, that nine years subsequent to this, M. Turgot prevailed on Lewis XVI. to give similar liberty to France, and with the same good effect. The progress of agriculture, the vast increase in the quantity of grain, and the diminution in its price, in consequence of this wife regulation, and of the freedom granted to the farmer for the sale of his commodity, are sufficient to evince how much population must have been retarded by the previous restraint.

The ignorance and jealoufy of government were not confined to corn, for with the fame contracted views, and influenced by the same short fighted policy, the kings of Spain effectually discouraged, and continue to discourage, the breed of borses, which, if not restrained, would prove a never failing fource of wealth. The very means adopted to increase the breed have had the opposite effect. To confine the market, and thereby to fink the price; to oblige all the farmers to register their horses, with the age, the colour, and the fize: to exact from them a strict account, and to subject them to heavy fines; to harafs 5

harafs them with unfeafonable vifitors, and to leave them at the mercy of low men in office; furely this can never be the way to promote their industry, and to encourage them in producing the commodity fo much to be defired. The intention of the king is to mount his cavalry at a fmall expence; but should the breeder continue subject to fuch vexations, the race will fail, and mules will fupply their place. Let the ports be open; extend the market; give freedom to commerce; and leave the farmers unmolested to pursue their various operations; let their industry have free scope to move in; let them be protected in their persons and their property; then, let the magistrate retire.

From the fame mistaken policy, dealers, or jobbers, in corn and cattle, have been discouraged, under an idea that they raised the price. This error, however, has not been confined to Spain; for in the English statutes are to be found provisions against regrators, yet, without middle men, the attention of the farmer would be distracted, and for want of a ready sale for his commodities, he would have neither time nor capital to conduct his business to advantage. These

middle men create dispatch, and eventually increase production.

Previous to the year 1750, the fisheries were much discouraged by the rapacity of the corregidors, alcaldes, regidors, and other magistrates, who plundered the fishermen of their best fish, as a recompense for their trouble in making the affize, and then ruined them by fixing the price too low. These grievances I have already stated in treating of the fishery at Carthagena.

Since the acceffion of the present family, found policy has led them to establish barracks; but, previous to the commencement of this century, the military were lodged in the houses of the peasants. In the year 1686, Osorio represented that quartering the soldiers had destroyed most of the villages in Spain. This may be readily conceived, when we are informed, that the military stipend was far from being regularly paid.

The state of the police I have already given, when I was describing Cadiz and Malaga. Here it may be sufficient to observe, that as the regidors have purchased their office, they must naturally seek to indemnify

indemnify themselves; and although deputies and syndics, with equal authority, are now elected by the people, it is only since the year 1766, that this palliative expedient has been provided.

The people, thus every where plundered and oppressed, could not increase and multiply, as they would have done under a free and equitable government.

8th, Convents are by no means favourable to population. These in Spain are eight thousand nine hundred and thirty-two, containing more than ninety-four thousand monks and nuns; but the perfons bound to celibacy by vows are not much below two hundred thousand. Yet this superabundance of the drones is not fo much the cause, as the effect of their declension, being much increased by the stagnation of their trade. The university of Toledo, in a memorial delivered to Philip III. at the beginning of the seventeenth century, complains, that not one-tenth of the ufual number of marriages took place; and particularly states, that whereas, whilst commerce flourished, it had been faid, Quien ba oficio ha beneficio, He who has a trade has the best Vol. II. benefice;

benefice; now all parents, dreading the poverty and wretchedness attached to trade, were inclined to breed up their children nuns, monks, and parish priests, or even exposed them to perish in their infancy.

oth, Numerous festivals tend to depopulate a country. Benedict XIV. lessened the number in his temporal effates, and recommended a fimilar reduction to his clergy. In confequence of this, in the diocese of Toledo, they have now no more than ninetythree general festivals, not including the special festivals of each parish, and of the religious houses, which, in every city swell the number of unproductive days. If to these we add the occasional bull feasts, and the Mondays, claimed both by apprentices and journeymen for their own diversion, we shall have reduced considerably the number of working days; but even then we must be obliged to make a fresh reduction from their time, because the working hours are feldom more than fix; infomuch that all the unprofitable hours being carried to account, not more than one-third, or perhaps one-fourth, remains for labour. How then is it possible to stand a competition in manumanufactures with more industrious nations? (V. Camp. E. P. p. 274.)

10th, Prevalence of pasture tends to depopulate a country. Grazing and tillage should ever be united. The same quantity of land, which, in wild pasture, would require the labour of one family, if tilled, would give employment to twenty, or even twice that number. In Spain, ever fince the year 1350, at which period the plague had carried off two-thirds of the inhabitants. the laws of the Mesta have set at variance the ploughman and the shepherd, preventing each from deriving the leaft advantage. from the other, infomuch that five millions of theep, under the fanction of a peculiar code, not only fail to enrich the lands on which they feed, but effectually prevent its cultivation. Independent of the Merino flock, many of the great landlords have fuffered villages to go to ruin, and have let their estates to graziers.

Previous to the recovery of the fouthern provinces from the dominion of the Moors, the distracted and divided state of the peninsula made it necessary for the peasants to

Q 2

feek

feek refuge in the cities, or at least to associate in villages for their mutual defence. For this reason, independent farms, detached and distant from a town, are seldom, if ever, feen in the fouthern provinces of Spain. The cities, towns, and villages, were built on the most fertile spots, and between many of them intervened vast tracts of land, little fusceptible of cultivation. When the plague of the year 1347 had spread desolation through the country, many towns and villages were fuffered to go to ruin and decay, whereby the distance between those that furvived was confiderably increased. To this event has been attributed the extensive territories of innumerable towns, many of which are from ten to fifteen miles diameter. and therefore too far distant from the habitation of the farmer to admit of cultivation. Adjoining to the village you observe vines, olives, figs, and grain; all beyond is defolate and wafte.

Previous to the conquest, when the christian princes were inclined to make war upon the infidels, they invited the great nobility of other countries, and their own feodal lords, to join them. Many of these could

could bring into the field five or fix thoufand vassals, and were bound to maintain them, at least to the frontiers, at their own expence. But then, as most of these were little less than independent sovereigns, the prince was obliged to court them; and, if he would allure them to his standard, it was by the hope of making conquests for themselves, that he prevailed on them to follow him. Hence they acquired, by arms, cities, towns, and villages, with extensive districts.

In fucceeding periods, the great nobility, taking advantage of their fovereign during his minority, when either contending for the regency themselves, or embarrassing the regent, they extorted considerable grants from the king's demesse, consisting of cities, towns, and villages, with the adjacent territories; all which they transmitted to their posterity.

By intermarriages, many of these vast possessions have been united; insomuch that three great lords, the dukes of Osuna, Alba, and Medina Cœli, cover almost the whole province of Andalusia; and the last

of

of these, claims by inheritance, the greatest part of Catalonia.

Such vaft possessions passing by entail, are far from being friendly to population, more especially as the proprietor never resides on his estates, and, being often embarrassed in his circumstances, has little inclination, and less ability, to make improvements for his heir.

12th, To this want of yeomanry, must be added, the defect of substantial tenants. I have already remarked, when speaking of the court, that most of the great estates are in administration, that is, cultivated by stewards on the lords account, and therefore not productive. If tenanted, the rent commonly is paid in kind; and this, when, from bad crops, corn is dear, ruins the farmer. In fuch circumftances, it is difficult to raife a tenantry with fufficient capitals to stock a farm. In tillage, it is found, that, to occupy an estate to advantage requires a capital more than equal to five times the rent. But in Spain, few fuch are to be found. Should they, however, perfect what the wifest among them, with count Campomanes pomanes for their guide, have been long attempting, an agrarian law; should they, as proposed, allow every man to cultivate what quantity he pleases of waste land, without a special grant from the proprietor, and to enjoy it as a copyhold, charged with a quit-rent equal to the value, previous to this improvement, in process of time they will raise up both a yeomanry and tenantry, and, in consequence, a more numerous population.

13th, Royal Manufactures and Monopolies have a baneful influence on population; for, as no private adventurers can stand the competition with their sovereign, where he is the great monopolist, trade will never prosper. The Spanish monarch is a manufacturer of

Broad cloth, at Guadalajara and Brihuega;
China, at the palace of the Buen Retiro;
Cards, at Madrid and Malaga;
Glass, at S. Ildefonso;
Paper, in Segovia;
Pottery, at Talavera;
Salt Petre, Madrid, and various other places;
Stockings, at Valdemoro;
Swords, at Toledo:

Q4

Tapestry,

Tapestry, at Madrid;
Tissue, at Talavara.

He has the monopoly of brandy, cards, gun-powder, lead, quickfilver, fealing wax, falts, fulphur, and tobacco.

14th, To this may be added, as a cause of depopulation, the national prejudice against trade. Whilst the Jews were merchants, and the mechanic arts were left, either to the Moors, or to the vilest of the people, the grandees or knights were ambitious only of military fame. After the conquest of Granada, the Moors continued to be the principal manufacturers, and excelled in the cultivation of their lands. When thefe, with the Jews, were banished, a void was left, which the high-spirited Spaniard was not inclined to fill. Trained to the exercise of arms, and regarding fuch mean occupations with difdain, his aversion was increased by his hatred and contempt for those whom he had been accustomed to see engaged in these employments. He had been early taught to confider trade as dishonourable; and whether he frequented the theatre, or listened to the discourses of the pulpit orators, he could not fail to be confirmed in his his ideas. Even in the present day, many, who boast their descent from noble ancestors, had rather starve than work.

We must not imagine that the Spaniards are naturally indolent; they are remarkable for activity, capable of strenuous exertions, and patient of fatigue: if, therefore, unemployed, this must be attributed to other causes, of which, respecting some occupations, national prejudice is one.

15th, Among the defolating causes, I must be allowed to mention one, on the teftimony of a native Spaniard, because I never had occasion to observe the least trace of it myfelf. It is acknowledged by count Campomanes, that the national prejudice was against the settlement of foreigners in Spain. Certain it is, that, for want of intercourse with other nations, the native Spaniards, being chiefly refident at home, excepting those who migrate to America, and few strangers even paffing through the country, all the arts, sciences, and manufactures have been at a stand, and appear to be at least a century behind the rest of Europe. In the year 1655, don Francisco Martinez de Mata, an author of high reputation,

putation, in his feventh discourse on the depopulation of Spain, complained, that a hundred and twenty thousand strangers, working cheaper, and apparently better, than the natives, were allowed to spread over the country; entering it poor, but by their diligence acquiring wealth, and returning home loaded with gold. He afferts, that they carried out with them annually more than eight hundred thousand pounds, or feven million three hundred and twenty thousand ducats: these men only filled up the vacancy made by the expulsion of the Moors. He recommends giving alms to ftrangers, but not employment; and, to confirm his advice, relates the history of a Spanish farrier, as an example to be followed: This man went to Paris, with a view to work at his trade, but being threatened with death should he there venture to exercise his art, he retired to Bourdeaux. where he hoped to find a more hospitable reception; but there they cut off one arm, that he might no longer work, and rob the native farrier of bread. (Camp. E. P. A. 4. D. 184.)

16th, Perfecution is a powerful cause of depo-

depopulation; and, like the national prejudice against strangers, prevents many useful subjects from being added to the state. It were endless to enumerate the advantages a community derives from toleration. As without an established religion the poor would be neglected, and, in the villages at leaft, would be in danger of lofing all knowledge of a deity, fo, without a toleration, there could be no competition, and therefore little scope for emulation, without which zeal would be apt to languish, morals to decay; and, in process of time, the most important truths would, by the many, be totally forgotten.

The good bishop of Oviedo, lamenting over the manners of the age, comforted himself at last under a persuasion, that, through the activity and zeal of the inquifitors, they had no infidels in Spain. For my part, I am persuaded, that the torpid infidelity of ignorance prevails more in Spain, than the active infidelity of science in either England or France.

All the enlightened nations of Europe have at last discovered the folly of persecution, and feem to be perfuaded that the

refort

knowledge, their industry, and arts, will bear proportion to the extent of toleration. It is now generally felt, that these contribute to enrich, and, by the increase of people, to make most powerful the country in which the citizens, without distinction, enjoy most civil and religious liberty.

17th, The gold and filver of America, in-Read of animating the country and promoting industry, instead of giving life and vigour to the whole community, by the increase of arts, of manufactures, and of commerce, had an opposite effect, and produced in the event, weakness, poverty, and depopulation. The wealth which proceeds from industry resembles the copious yet tranquil stream, which, passing filent and almost invisible, enriches the whole extent of country through which it flows: but the treasures of the new world, like a fwelling torrent, were feen, were heard, were felt, and were admired; yet their first operation was to defolate and lay waste the fpot on which they fell. The shock was fudden; the contrast was too great. Spain overflowed with specie, whilst other nations

tions were comparatively poor in the extreme. The price of labour, of provisions, and of manufactures bore proportion to the quantity of circulating cash. The confequence is obvious: in the poorer countries industry advanced, in the more wealthy it declined.

Combined with all the forementioned causes of depopulation, this became more fatal to the prosperity of Spain than it would have been, had circumstances been more propitious. Had the country been populous and well governed, had peace been cultivated, and had the manufactures flourished, had the convents been recently destroyed, and the festivals abolished, had emigration ceased, and had strangers reforted to settle in the country with their industry and arts, this wealth would have given new vigour to the nation. But, instead of this benign effect, fudden repletion produced a torpor, ending in a political difeafe, fimilar to that which, in like circumstances, affects the human frame. Even in the present day, specie being about fix per cent. less valuable in Spain than it is in other nations, operates precifely

cifely in the same proportion against her manufactures and her population.

18th, Had all Europe continued upon one level, the above stated causes of depopulation had not been fo feverely felt in Spain. But, unhappily for her, these were rendered more destructive by the rising industry, and consequent prosperity, of rival nations, in which convents were left empty, numerous festivals abolished, to which strangers might refort, where property had been long fince more equally divided, and where new learnt commerce led to wealth and power. These nations, in proportion as civil, religious, and commercial liberty advanced, grew into greatness; and, like the spreading oak casting a shade on the more weakly faplings, did not fuffer them to rife.

Supposing all nations to be equally well governed, to enjoy the same degree of civil, religious, and commercial liberty, the wealth and prosperity of one will extend to all. But should one nation continue free, in the full possession of public confidence and public credit, whilst another is governed by despotic sway, subject to the capri-

cious.

cious will of a weak prince, or of a wicked minister, and therefore destitute of public considence and public credit; the former will increase in wealth and power, the latter will decay, and freemen will give law to slaves.

Should the people take advantage of the present crisis to banish the inquisitors, and to affert their freedom; should they, happy in possessing one of the richest countries upon earth, contract the bounds of their unwieldy empire; should they confine their views within the limits of their own peninfula, and cultivate the arts of peace; should they, to cherish industry, abolish the monastic orders, lessen the number of their festivals, establish an agrarian law, and strike off the fetters, by which their commerce has been bound; confidering the foil, the climate. the abundance of water, the natural productions, the rivers, the harbours, and the local fituation, we may venture to affirm, that no country, of the same extent, would be more populous, more wealthy, or more powerful, than Spain.

Let her for ever keep her true interest

in view, and all Europe must rejoice in her prosperity.

Before I turn my back upon Madrid, I must briefly describe the ministers of state, and some principal characters about the court.

It is well known that the government was feodal; that Spain enjoyed the protection of its cortes; and that the power of the monarch was circumferibed by laws. At present, no sovereign can be more defpotic. The transition forms a most interesting epoch in their history, but such as would require more time in its developement than a traveller can bestow. Whenever I shall have an opportunity to resume this fubject, I shall endeavour to shew, that Spain, like all other countries which have lost their liberty, was ruined by the inordinate ambition, and by the unjust pretenfions of the great. Whilst labouring to curb the monarch, and to depress the people, they themselves have funk, have lost their power, and are become perfect cyphers, affembled round the fovereign like prisoners, or, at best, like servants, and not like pillars to support his throne. The

The reigning monarch, Charles III. has never been confidered as a man of more than common abilities; but all who know him, admire the goodness of his heart; and indeed it is impossible to look at him without reading diffinctly the characters of benevolence and truth. As a man of principle, he esteems it his first duty to promote the happiness of the nation over which he reigns; and if at any time his conduct hath been inconfistent with his principles; if he hath contracted unnatural alliances, without either the plea of necessity or prospect of advantage; if, in defence of a relation, he hath hastily engaged in war, it hath been always from goodness of heart, and from the influence of gratitude, that he hath erred. In choosing his ministers he confults only the good of his people; and it must be confessed, that commonly he is well directed in his choice.

His present minister, count Florida Blanca, is a man of singular abilities, of upright intentions, and of indefatigable industry. His father was Escrivano Episcopal in Murcia. He himself, early in life, was Vol. II.

taken into the house of Benevente, as advocate to the duke of Arcos, under whose patronage he became fifcal, or one of the judges of Castille. In this employ he made himself conspicuous, by seconding the views of count d'Aranda for the expulsion of the jefuits, and by quieting the tumults which, upon that occasion, the bishop of Cuenca, a prelate exceedingly attached to those intriguing fathers, had excited. After their expulsion, he was fent as ambassador to Rome, where he acquired much reputation, by obtaining the fanction of the pope to measures, which, in the event, have proved most fatal to the papal power. From Rome he was called by his fovereign to direct his councils, whilft the marquis of Grimaldi, who had been minister, was ordered to replace him at the holy fee; and count d'Aranda, who, as prefident of Castille, and governor of the council, had been omnipotent, was fent ambaffador to Paris.

The new minister was not unmindful of his friends: upon all occasions he has shewn a marked attention to the house of Benevente,

Benevente, and has proved, that he retains a grateful remembrance of the protection received at his first entrance into life.

-in Whilst at Cuenca, he had lodged in the house of don Pedro de Lerena, one of those favourites of fortune, who, without natural pretentions, with little exertion, and lefs merit, are raifed to the highest stations, and to the enjoyment of every comfort that wealth can purchase to sono

Quales ex humili magna ad fastigia rerum officit Extellit, quoties voluit fortuna jocari.

the king, procured him, on the Don Pedro de Lerena, fon to a miferable publican at Valdemoro, was bound apprentice to a blackfinith, who lived opposite to his father's house. In a lucky hour he married a rich widow of Cuenca, and, by the interest of her family, became some little official in that city. Here he had the good fortune to receive under his roof Moñino, now count Florida Blanca, and to fecure a place in his good opinion. When the count took the reins of government, he was not unmindful of his friend, but embraced the earliest opportunity of serving him. Under fuch a powerful patron, R 2 Lerena

Lerena became agent to the army in Minorca, and, after the capture of that island, went with the duke of Crillon to Gibraltar in the same capacity, and, at the termination of the war, he became intendant of Andalufia, and affiftant of Seville. Whilst he continued in that employment, he procured, after the custom of his country, certificates of his good conduct from all kinds of bodies, civil, military, and ecclefiaftical, and from individuals of eminence, all which, being submitted to the inspection of the king, procured him, on the death of don Miguel de Musquiz, the appointment to the high and important offices of the finance of war.

The family of the Galvez, equally fortunate, were all men of superior talents. Don Joseph de Galvez, marquis of Sonora, and minister of the Indies, was of a mean family, near Malaga, in the south of Spain, but, by his great abilities, he raised himself and his relations to the highest honours of the state. His two brothers drove boricos, and were called Tio, an appellation answering to uncle, or to gasser; yet one of them became viceroy of Mexico, and, at his death.

[245]

death, was fucceeded in the fame regal office by his fon. Joy and at both distance of

Don Antonio Valdes, the prefent minister of the marine, stands indebted to his merit for his high station. As a captain of the navy, and as a commodore, he was distinguished; and how much the nation is indebted to his fingular abilities, and more than common application, will appear, when, in describing Cadiz, I shall give a statement of the marine, and shew the increafing power of the Spanish navy. Till I had been at the fea-ports, I could form no idea of his superior talents, and therefore profited little by his condescending permission to approach him. I can only now lament that I did not fpend more time in his fociety. word looden is a still

Of Count Camponanes I have already spoken. All who have the honour of being near to him, admire the boundless extent of his abilities, which embrace every science; and the goodness of his heart, which turns all his knowledge towards one object—the prosperity of his country. He shines in all the several branches; but his peculiar excellence is in law, history, and R 3 political

political economy. He is wholly indebted to himfelf, and to the voice of the nation, for his elevation.

It must be striking to an Englishman to fee all the most important offices occupied by men who have been taken from the lower ranks, and not to find among them one man of fashion, not one grandee of Spain. These are all precisely where they ought to be: lords of the bed-chamber, grooms of the stole, masters of the horse, all near the throne, partaking of its fplendor, whilst the drudgery and responsibility of office is left to others who are better qualified to bear that burden. In England it is far otherwise: our men of fashion. from their infancy, are trained to high purfuits; at school they learn ambition, and when they come into the house of commons, they fee, that to be distinguished for application and for knowledge is the only way to gain confideration, and to arrive at power. This proves fuch a fpur to diligence, that, in fpite of their hereditary wealth and honours, many of the greatest men, and the most able ministers, are to be found among our principal nobility. In

In Spain, on the contrary, in the higher ranks, all is torpid. Satisfied with hereditary wealth and honours, the grandees fink into mere fenfualifts, and are loft. Nay, fuch is the general neglect of education, that the principal ministers find it difficult to procure proper men to fill the common offices.

When my friend, don Eugenio Izquierdo, returned from Paris, where he had been educated for the royal cabinet of natural history, of which he was appointed director on the death of Davila, he was defired immediately to make out a catalogue, in order to convince the world that Spain was not behind other nations in this interesting branch of science, and that he might affift to wipe away the reproach which M. Maffon had caft upon the pation. He was revolving this commission in his mind, but ere he could begin the previous arrangement of the cabinet, he was hurried away to teach the art of dying, and to superintend the cloth manufacture at Guadalajara, where all was in confusion, and . where every branch required a reform.

According to the maxim of no con-R 4 temptible

temptible philosopher, a wife man is every thing, either an humble mechanic, or a minister of state; and certainly, with time, he may be qualified for either. But however qualified my friend might be for this new employment, he could not shew himfelf at Guadalajara without danger; for the moment he appeared, he found himself in a nest of hornets. All who had been accustomed to eat the bread of idleness, to receive their falaries, and to neglect their work, or to share among themselves the plunder of the state, became his enemies, and, as I understand, never left him, till by their perfecution, at the end of two years, they had compelled him to retire.

His friend Angulo, trained by him at Paris for the branch of natural history, whose ambition it was to be vice-director of the cabinet, no sooner returned to court, than he was appointed chemical professor, and received orders to prepare for giving a course of lectures the ensuing winter. Astonished at this command, he enquired for the elaboratory and the apparatus. He was told, that the soundation of the former should be instantly laid, and that he himself must

must give orders for the latter. But before he had time to look about him, he was fent by the minister of the finance to superintend the working of a lead mine at Linares. My friend acquitted himself to the fatisfaction of the minister, and was appointed director general of all the mines in Spain. In this capacity he was fent to Riotinto, where I engaged to follow him, but when I came near the place, I found he had been dispatched to another part of the kingdom, to inspect a mine supposed to be of cinnabar. Samples of this ore had been fent to the minister of the finance. with the quickfilver extracted from it. which was in abundance; and the most flattering hopes were entertained at Madrid of the wealth to be obtained from this new discovery. But, unfortunately, the whole was a deception; and my friend, mortified at first at not being able to detect a fingle particle of mercury, was at last so happy as to extort a confession from the impostor, of the means made use of to deceive the minister, under the expectation of being appointed manager of this rich mine.

M. Clavijo had been manager of the king's

king's theatre; but when a proper person was wanted to conduct one of the public prints, he was appointed to that office, and, being a man of letters, he acquitted himfelf to the fatisfaction of the court. On the death of M. Davila, when don Eugenio Izquierdo became the principal director of the cabinet, and a proper person, as vice director, was wanted to fucceed him, the minister of finance fixed on my friend Clavijo, and will, I am perfuaded, find in him. that a wife man is every thing. This gentleman hath already translated the works of the count de Buffon; and, should he be left quietly in his department, from his abilities and his application, it may be hoped that he will make a rapid progress in the science of natural history. Yet, such is the scarcity of able men, that, in all probability, M. Clavijo will foon receive fome new commission.

During my winter's refidence at Madrid, I cultivated the acquaintance of colonel Nodin, an Italian officer in the Spanish fervice, distinguished for his proficiency in algebra. This gentleman was so happy as to attract the notice of the minister, and received.

received a commission to perfect the navigation at Tortosa, where almost insuperable difficulties occurred. He was preparing to set out, when I left Madrid with the pleasing expectation of meeting him at the place of his destination; but on my arrival, I found that he had been sent into the north of Spain, to make a road, where the minister of finance conceived that algebraical calculations might be useful.

It would be inexcuseable in speaking, even in the most transient manner, of men who are distinguished in Madrid, as employed about the court, not to mention the two brothers Yriarte, who, for taste, for judgment, and for science, have sew superiors in the most enlightened countries. Don Bernardo has some place in the finance, but his brother is the man of letters.

There was a time when the apothecary, don Casimiro Gomez Ortega, was the only person qualified to teach either botany, chemistry, mineralogy, or natural history; but he has lived to see many competitors for same, not excepting his favourite science, in which he most excels.

Don

descendents

Don Antonio Solano, professor of experimental philosophy, merits attention for the clearness and precision of his demonstrations; but, unfortunately, although his lectures are delivered gratis, such is the want of taste for science in Madrid, that nobody attends them.

Gratitude, as well as the highest veneration, requires that I should mention don Francisco Bayer, first librarian to his majesty, and late preceptor to the infant don Gabriel, a prince who stands high in the republic of letters, for his elegant translation of Sallust: in this work we evidently see the master's hand, but the pupil is said to deserve his share of praise,

The last person I shall mention, who is distinguished for his talents, although not the least deserving of commendation, is Juan Bautista Muñoz, historiographer to the king, with special commission to write the conquest of America. This gentleman honoured me with his friendship, and suffered me to examine freely all his manuferipts; he was seven years collecting his materials, and, for that purpose, visited every part of Spain where the families and descendents

descendents of the sirst adventurers reside, or where any public records are preserved. His collections are voluminous, and, I have no doubt, will be given to the world with the impartiality becoming an historian, and with that degree of elegance, which may be well expected from an author of his superior talents. He is a man of a clear head, a good classical scholar, and perfectly acquainted with the characteristic excellence of those, either in Greece or Rome, who have been most admired for historical composition. From him, therefore, not merely something new, but something highly interesting, may be expected.

Had Dr. Robertson, or had his friend Mr. Waddilove, known where to look for records, and spent seven years in making the collection, his work had been much more worthy of the public eye. He has, however, seized the ground, and when these new materials shall appear, he will employ them to advantage; and, both by his arrangement, and by the peculiar graces of his stile, confirm the reputation his former writings have acquired for him; and, if we may be allowed the expression,

put

put the last finish to the temple of his fame.

When I was about to leave Madrid, I addressed myself to my old friend Canosa, and, in a laughing way, desired that he would procure me letters of recommendation for the southern provinces. He at once promised that I should have them; but, not satisfied with this mode of application, I desired Mr. Liston to beg from count Florida Blanca a letter for Murcia, the place of his nativity. The count obligingly enquired, what route I meant to take? and, in a few days, sent me letters to all the governors of provinces, and to some principal person in every city, through which I was to pass.

Nothing then remained, but to form a party, and to hire a carriage for the jour-

ney.

In the mean time I procured proper passiports, one from the minister, another from count Campomanes, and a third from my valuable friend Escarano. The first was for the sake of form; but the two latter might be of the most essential service, and were actually useful to me on several occasions.

fions. I likewise got myself introduced to the inquisitor-general, not merely to satisfy a natural curiosity, but that, in case I should stand in need of his protection, my name might not be altogether unknown to him.

Having adjusted all matters for my journey, previous to my departure, I enquired into the prices of provisions at Madrid, and

found them to be as follow:

Bread, $6\frac{1}{2}$ quarts per pound of 16 ounces; Beef, - 14 ditto ditto; Mutton, 15 ditto ditto.

A quart is $\frac{18}{64}$ of a penny, or a small fraction more than a farthing. Eight quarts are equal to $2\frac{1}{4}$ pence English.

juez in the evening.

one hundred, not all as yet employed. I he

MADRID TO SEVILLE.

resident lines a to avange to a later the A. r5th February, 1787.

WHEN the day for our departure was arrived, we entered our coche de colleras, drawn by seven mules, and, passing through Valdemoro, came to Aranjuez in the evening.

At Valdemoro, a town containing one thousand nine hundred and thirty-eight souls, with two convents, we found a royal manusactory of stockings, lately established by the minister of sinance, to honour the place of his nativity. The frames are about one hundred, not all as yet employed. The stockings are very weak, and badly woven; the

the worsted is only of two threads, and not well spun. In this manufacture, a good hand will earn twelve reals, or about 25. $4\frac{1}{2}d$. per day.

As the country was not new to me, my attention was chiefly occupied in reading my companions. With one of them, M. Seguier, a French captain in the Spanish service, I was well acquainted, having met him often at the dukes de la Vauguion and Berwick. The two others were Colonel Davila, a native Spaniard, lately from Mexico, and a naval officer; the former going to Malaga, the latter to Cadiz. As these gentlemen had often travelled the same road, they knew where to lay in provisions, and where to procure good wine; consequently we wanted nothing that money could procure.

The inn at Aranjuez is upon a large scale, making forty-four beds, all very clean and comfortable. It is royal property, and the king receives from it a rent of fifty-four thousand reals, or £. 540 per annum.

The next day we passed through Ocana, a considerable city, two leagues from Aranjuez, and nine from Madrid. It compreVol. II.

hends four parishes, containing four thoufand eight hundred and eighty-fix fouls, and supports ten convents. As it was too early to think of rest, we proceeded four leagues further, to La Guardia; and although it is not the usual stage, we found good accommodations. All the way from Madrid, the country is tolerably level, the foil is fandy, the rock is gypfum, the produce chiefly corn, with some vines and olives. Here, in the famous country of La Mancha, we naturally looked out for wind-mills, which, as they have no streams to grind their corn. we faw, as we expected, in the vicinity of every village. They have no oxen; and nothing but mules, or affes, are used for all the purposes of husbandry.

La Guardia was formerly a place of strength, and was long defended by the Moors; but now it appears to be verging to decay. It reckons still about one thou-fand families, consisting, according to the returns to government, of three thousand three hundred and forty-four persons; but, in fact, they have more than three thousand who receive the facrament, and about eight hundred children under the communicating

age. They have no manufacture except faltpetre, and that is not confiderable: hence their poverty and wretchedness. Their lands are divided into small allotments, but the chief proprietor is Don Diego de Plata. The rents are paid in corn.

The church is a very handsome wellproportioned building, the altars mostly new, and simple. In one chapel are many good pictures by Angelus Nardi.

They have no beef. Mutton is twelve quarts, bread five quarts the pound of fixteen ounces.

After dinner we proceeded two leagues to fleep at Tembleque, a town of about two thousand families, but reckoned to contain only four thousand four hundred and eighteen souls, with one parish-church, one chapel, and one convent. The most remarkable thing here is a manufacture of saltpetre, in which are employed forty men in winter, sixty in summer, making six thousand arrobas every year. I found the manager more than commonly intelligent. He told me, that the expences, notwithstanding the most rigid economy, amounted to six hundred thousand reals; that is, to about four reals,

S 2

or nearly $g_{\frac{1}{2}}^{\frac{1}{2}}d$. per pound, of which, according to this statement, the labour costs no more than one penny; so that the other eight pence halfpenny is for fewel, furnaces, management, interest of capital, and other incidental charges. Should we carry this calculation with us to Madrid, how much beyond what I have already stated will appear to be the loss on those extensive works, where sewel is so scarce.

He informed me, that he collected all his earth from spots of ground, on which animal and vegetable substances had lain in a state of putrefaction.

On Saturday, February 17th, we passed through Camunas, a miserable village containing about three hundred cottages, to las Ventas de Puerto Lapiche, having in these three last days travelled two and twenty leagues.

The country is flat, and the view to the north extensive; but before we reached las Ventas, we had lost fight of the snowy mountains which separate the two Castilles. Under savourable circumstances of air and elevation, I think they must be seen more than a hundred miles. The soil is a

loose sand of quartz, and the rock is granite. It is ploughed with two assess or two mules; and wherever it is watered by norias, produces plenty of corn. The wine is excellent, and in great abundance. The village of Lapiche is wretched; and the people appear half starved, although their crops can never be disappointed by the want of rain, for in the space of about sixty acres, I counted more than thirty norias.

The Venta is in the old Spanish stile. It is one hundred and sifty feet in length, and, independent of a communicating shed, or penthouse, not more than ten feet wide. At one end is a chimney, by way of kitchen, ten feet square, with an hearth in the middle, surrounded on three sides by a bench, upon which the muletiers sit by day, and lie down to sleep by night; but open to the long range of stables, that with primitive simplicity, under one hospitable roof,

There is, adjoining to this, a court yard, S 3 with

Et pecus et dominos communi clauderet umbra.

with a well in the middle of it, and at one end a penthouse for carts and coaches. The bed-room is over the stable, and, according to custom, all night long we heard, or might have heard, the tinkling bells on the heads of our mules, at least as long as they were feeding.

Before we went to rest, we entered into treaty with the curate for early mass. He stood for fixteen reals; but at last, on closing the bargain, he agreed for eight. Had he persisted in his demand, we must have complied with it; because, to hear mass on holidays in a catholic country, is indispensable, and it would not have been convenient for us to stop upon the road.

From las Ventas we descended into an extensive plain, bounded by high hills on every side, producing olives and corn, with fassron. At the end of eight leagues, we came to Manzanares. All the travellers on this road were well armed; and three monumental crosses proved that their sears were not ill sounded. It was Sunday, yet many ploughs were working. Their crops are watered by numerous norias.

Manzanares has one thousand eight hundred

dred families, fix thousand seven hundred and fixty-eight souls. The houses are built with mud, and the poor are almost naked. In the church we saw four good pictures.

The Castle, with a considerable estate and the tithes, all belong to the knights of Calatrava, and are held by the infant don Antonio, yielding him a revenue of thirty thousand ducats, or f. 3295 per annum. We examined the premises, viewed the extensive granaries, and tasted the rich variety of wines. The steward was fending fome to court, for the table of the infant, which appeared to me, without exception, the best in Spain: it had the flavour of the richest burgundy, with the strength and body of the most generous port. After praifing this wine, and thanking the fleward for his civilities, we purfued our walk till the close of day; when, at our return to the posada, we had the happiness of finding more than three gallons of this wine lodged there, and already deposited in our botas, or leather bottles, for the journey. Unfortunately, the two coachmen foon difcovered its peculiar excellence, and, by their affistance, we finished in one day, \$ 4 what

what I had perfuaded myfelf would ferve us three.

The posada is more comfortable, and upon a larger scale than common, with two and thirty beds, all upon the ground floor. The building is about one hundred and eighty feet long, by thirty six or forty wide, with one long range through the middle for coach-house and stable, from which the kitchen is scarcely separated by a partial skreen. The bed-rooms to the right and left, are about sixteen feet by sourteen, each after the Spanish sashion, surnished with four beds.

On Monday, 19th February, we left Manzanares early in the morning, paffing through a level country to Valdepenas, at the distance of four leagues, to dinner. The soil is fand with gravel, producing some olives and much wine, but mostly corn. The norias are well constructed, with the great wheel of iron instead of wood.

The rock is fchift.

In the way we passed two monumental crosses.

Valdepenas is famous for good wine, which is fent chiefly to Madrid; but whenever

whenever the navigation shall be opened, as proposed, to Seville, this, with many other curious wines, the produce of La Mancha, will find its way to England, and will be in great request. In this town are seven thousand six hundred and sifty-one souls.

From hence we passed through Santa Cruz, and then began to ascend among rough uncultivated hills, till we took up our lodging at La Conception de Almuradiel. This little village, of thirty-six families, is the first we meet with in the new settlements of the Sierra Morena. It was built A. D. 1781.

The inn furrounds a court yard of ninety feet by fifty, with a coach-house adjoining, of one hundred and fifty feet by forty, and has stables in proportion. The rooms are well fitted up, each with a chimney, and two alcoves for beds. Above these are the apartments of the administrator, his deputy, and his fervants; with extensive granaries, and a corridor, forming a communication around it. Every thing here is upon the king's account, and, of course, little atten-

for the first time in Spain, dirty sheets; but, after some remonstrances, the administrator lent me a clean pair of his own.

Every fettler has ninety fanegas of land in emphiteufis, or as a copyhold, paying only the tithes to the king, and twelve quartos, or about three pence acknowledgment for the house.

Bread fells for eight quartos and an half a pound,

Ram mutton, ten quartos.

Beef they have none.

Wine is two quartos the quartillo, or about four pence sterling the gallon.

Santa Elena is peopled chiefly with Germans. In the vicinity we met with numerous cottages, not collected together, but feattered over the country, according to the plan recommended by the Abbé Raynal; but they foon discovered, what in this instance he seems to have overlooked, that man is happier in society, and therefore gave up this mode of settlement for villages.

The country is highly cultivated; yet fo

many trees are left, that the whole, at a little distance, appears like an extensive forest.

They plough with cows, and make difpatch.

In one cottage we saw tame partridges. These are trained, like decoy ducks, to collect others.

In the higher regions of the Sierra we find the granite; but, as we descend, the schist again appears, with limestone and gypsum.

At noon we came to Carolina, the capital of these new settlements.

Their founder, D. Pablo de Olavide, is a native of Peru, who, being protected by count d'Aranda, was made at first syndic of Madrid, and afterwards affistente de Sevilla. Whilst in this employment, he conceived the idea of introducing agriculture and arts in the deserted mountains of the Sierra, where rapine and violence had for ages established their dominion. The difficulty was to procure settlers. One Turrigel, of Bavaria, contracted for six thousand husbandmen; but, instead of men trained to agriculture, he brought only vagabonds, who

who all either died or were dispersed, without advancing the work for which, at an immense expense, they had been brought.

Settlers were then invited from all parts of Germany, and, in order to encourage emigration from those hives, every new comer, on application, received a lot of land, a house, two cows, one als, five sheep, as many goats, fix hens with a cock, one pregnant fow, a plough, and a pick-axe, with other emoluments of inferior value. They begin with fifty fanegas of land, of ten thousand square feet each; and when they have cultivated thefe, they receive fifty more, free of all rent for the first ten years, and after that period, subject only to the royal tithes. No proprietor can alienate his land to one who is in possession of a lot, in order that the farms may never become either too little, or too big. They are not permitted to fettle, either near to a morafs or to stagnant water.

The foil about Carolina confifts chiefly of fand; and the rock is either limestone or gypfum.

They produce olives, oil, wine, filk, wheat,

wheat, barley, rye, oats, peas, Indian wheat, and lentils.

They have no manufactures, and therefore cannot profitably employ all their people. Hence it is, that these new settlements swarm with half naked beggars.

The numbers, at present settled in the Sierra Morena, will appear from the government returns, and are as follows: unmarried men, two thousand three hundred and eighty-eight; unmarried women, one thousand seven hundred and twenty-four; married men, one thousand fix hundred and twenty; married women, one thoufand fix hundred and nine; widows, three hundred and eighteen; widowers, two hundred and nine; total, feven thousand eight hundred and fixty-eight. Of thefe, the husbandmen are one thousand seven hundred and eighty-four; day labourers, four hundred and eleven; artifans, one hundred and feventy-two; fervants, three hundred and fixty-fix; employed by the crown, one hundred and eighteen.

Confidering that all these were assembled and established in less than ten years, we must admire the energy and zeal of Ola-

vidè.

vide. They have been collected, at a vast expence, from distant countries, and enjoy singular immunities, yet the colony is far from prospering. The reason of this must be sought for, either in the climate, the soil, the government, the morals of the people, or in the want of a market for the

furplus of their produce.

It is allowed that no country, if the climate is unhealthy, or if the foil is barren, if it wants corn and cattle, or if it is destitute of fewel, can be populous; but, in the Sierra, excepting tertians, they are fubject to few diseases; the soil is certainly productive both in fruits and herbage, and it abounds with wood. Supposing the government of a country to be either weak or vicious, the peafant having no certainty of protection for his person and for his property, the most fertile foil, notwithstanding repeated efforts to increase its population, will be deferted, Or, should the morals be corrupt, the people will not increase and multiply; the births will not fill up the vacancies made by death; and, to keep up the population, emigrants must be invited from more prolific

lific nations. But neither is it from these causes that the Sierra languishes, because the people are self governed, that is to say, sive villages unite to choose a senate for the administration, both temporal and spiritual; and as for luxury, with its attendant vices, it is yet unknown. We must refer, therefore, to the want of a market, for the unprosperous condition of this new, this sequestered colony.

The principles, thus briefly stated, are confirmed by the experience of all nations. In favourable circumstances, a country, like America, will double its numbers at least every five and twenty years. Whenever, therefore, instead of thus advancing, population is at a stand, or going backwards, we may be certain that, if sought for, some of the causes above suggested will be discovered.

At Carolina we met with comfortable rooms in a posada, which is kept by a Frenchman, and fared sumptuously. It was February 20th, yet we had caulislowers and green peas.

The people in this district being subject

to agues, and to fuch intermittents, as, when neglected, foon turn putrid, I looked about for stagnant water, and for marsh miasma; but I could find none, and am therefore satisfied, that these diseases may arise from other causes, beside those which have been commonly assigned.

Thus far the road through the Sierra is excellent; but all beyond is in a state of nature.

About two leagues from Carolina is Guadaroman, a village comprising one hundred families, each possessing its fifty fanegas of land. It is situated on a gentle declivity, by the side of a purling brook, in a fertile spot, which is chequered with corn fields and little groves of ilex. The distant hills are beautifully varied in their forms, and covered with wood. The soil is sandy, and the trees are healthy; yet the inhabitants suffer much by intermittent fevers.

They have no beef. Mutton is feventeen quarts, or four pence three farthings the pound of two and thirty ounces; and bread is half that price.

The

The inhabitants are chiefly Germans, who, both by their industry and frugality, do credit to their country.

As we increase our distance from this little colony, we lose fight of every thing which marks the refidence of man; but, in approaching Bailen, we pass through immense plantations of the olive, belonging, with that village, and a vast extent of country round it, to the countess of Penasiel. In the way we see Banos, with its castle, situated on a hill, and commanding a distant prospect. Having quitted Bailen, we entered a forest, and at the top of a hill saw one monumental cross; then, leaving Zoguega, with its convent, to the right, we came to the venta of Sequaca; and after dinner, fometimes traverfing extensive forests of the ilex, at others meeting with plantations of the olive, we came to Andujar.

The rock, wherever it is laid bare by torrents, appears to be hard granite, of different species, both of the red and of the white.

Andujar is fituated in a rich and highly Vol. II. T cul-

cultivated plain. It numbers fix thousand eight hundred families, five parish churches, and ten convents, but has no manufacture. The castle carries the marks of great antiquity; it was taken from the Moors, A.D.1225, by Ferdinand III. surnamed El Santo.

Thursday, February 22, at five in the morning, when we left Andujar, after croffing the bridge over the Guadalquivir, and entering a plantation of olives, my companions each cocked his piftol, and held it to the window, whilst a foldier, with his gun, walked by our fide, and the coachmen were charged instantly to stop, if any one appeared. These precautions, I apprehend, were needless, because it was well known that we were armed; but as feveral robberies had been committed near the city, they thought it right to be upon their guard. At break of day, as we advanced into a more open country, our apprehenfions vanished, and the pistols were uncocked.

All the hills we croffed, bounding the river to the north, are covered with smooth, round, limestone gravel, and some flints; but

but in approaching to Del Carpio, the rock appears formed of filicious grit with mica, evidently from decomposed granite.

In Del Carpio are seven hundred and fifty houses, with an old castle, a post-house, and a well built posada.

As foon as we arrived, we paid our refpects to the corregidor, and shewed him our paffports, in order to fecure a good reception at our inn. The reason of this precaution was, that one of our companions had formerly quarrelled with the good man of the inn, and had caused him to be sent to prison, for attempting to stab him with a knife. The man kept out of fight, but his wife was determined to take revenge: it was little she could do, but all she could, fhe did, to testify her resentment. For this purpose she assigned us a miserable room, with four mattreffes, each occupying its corner, and stretched upon the floor. Fearing to be devoured by fleas, I chose rather to sleep in our carriage. In the middle of the night the treading of a foot awakened my attention; and, as there was a lamp, I looked out to fee who was in motion. My fituation rendered me invifi-

T 2

ble.

ble, and the light enabled me clearly to discern every thing that passed. The perfon who was moving was a muleteer, and his object was to see what he could steal. For this purpose he examined the kitchen, then visited the passage communicating with the bed-rooms, and tried at every door, but finding them all sastened, he came to the coach; where seeing me, he sled back into the stable, and hid him-felf.

Provisions here are cheap. They kill no mutton: beef, goat, and kid, are fixteen quarts a pound confishing of thirty-two ounces.

The land in the vicinity is rich; it belongs chiefly to the dutches of Alba, and her corregidor administers it for her: he appears to manage well. The plantations of olives are extensive, and the trees are not, like those of the countess of Penasiel round Bailen, worn out with age, but young and healthy.

As we drew nigh to Cordova, the higheft hills are covered with flints and bowlder stones, or smooth tumblers, of limestone, filicious grit, and granite; and, as we approach approach the river, we discover a bed of gravel, of all the above species, twelve or fourteen feet in thickness.

extent, which is bounded on the fouth by fwelling hills cultivated to their very fummits, and on the north by a chain of rugged mountains, the continuation of the Sierra Morena. Through the midst of the plain runs the Guadalquiver; and the whole country being well wooded, well watered, and well cultivated, cannot be surpassed either in riches or in beauty. Here, for the first time since I left Barcelona, I rejoiced to find the fig, the orange, and the palm, in great abundance. It is a most enchanting spot.

This city contains thirty-two thousand fouls, fourteen parishes, and forty-four convents.

The first thing I did on my arrival, was to present myself before the intendant, with my letter from count Florida Blanca. He received me with politeness, and pressed me to prolong my stay; but, unfortunately, I had made engagements, and therefore proceeded the next day. All that I could do

T 3

was to visit the great church, and with this I was exceedingly delighted. Its numerous pillars, arranged in quincunx, appeared like a grove of faplings; they are faid to be eight hundred, I had not time to count them, yet I should conceive them to be many more. It was a mosque. The dimensions are five hundred and ten feet, by four hundred and twenty.

I was struck with the multitude of beggars in every street; and, upon enquiry, foon found the cause to be the mistaken benevolence of the bishop, of the canons, and of the convents, in distributing alms to all who ask. The bishopric is worth eighty thousand five hundred ducats, or £.8,843 pounds sterling, per annum; out of this income the bishop gives money every day, alternately, to the men and to the women, and on fome days he has relieved more than feven thousand persons. Besides pecuniary donations, he distributes daily thirty fanegas of corn; yet, notwithstanding this more than ample provision for the indolent and vicious, many are faid to have perished last year for want of bread.

The chief diseases are tertians and putrid

[279]

fevers; these arise from the quantity of cucumbers and melons they eat, not only in the fummer, but early in the spring.

Provisions are, beef thirteen quarts the double pound, mutton fifteen, pork twenty-two, wine fix quarts the quartillo, or about one shilling the gallon; labourers expect feven or eight reals a day, or, if they are victualled, only three.

Cordova had the honour of giving birth to Seneca and Lucan; and when Abdoulraman, after fubduing the fouth of Spain, had established here the feat of his dominion, (A. D. 759), the sciences, with arts and arms, which were every where elfe abandoned, took up their refidence, and flourished in this city.

Saturday, February 24, at fix in the morning, we fet forwards on our journey, having joined another coach, which was going the fame road with four gentlemen well armed. In travelling through Spain, I have constantly observed, that, wherever danger is apprehended, travellers affociate, and form fometimes confiderable bodies, yet without any communication, or verbal engagement for mutual defence, or any other

T 4

other bond of union beside their sears. Insluenced by these alone, they unite their forces, and make a tacit agreement to support each other, or at least, by their numbers, to intimidate the thieves. One of our companions, the naval officer, not satisfied with this reinforcement, in addition to the soldier, who attended our captain by way of a servant and a guard, hired two marines. Thus escorted, we proceeded with considence, yet with circumspection; thinking at least to have a view of the villains who had been robbing on this road, but happily we saw nothing of them.

In traverfing the downs, I observed on the summit of the highest hill, at the distance of about two leagues from the Guadalquivir, the surface covered with bowlder stones, of the same species with those already mentioned in the approach to Cordova. Such sacts should be treasured in the memory.

We came at noon to Charlotta, a new fettlement, and at present in its infancy, like those of the Sierra Morena. The country is beautiful, the soil rich, the herbage luxuriant, and the oxen large. In the posada

posada we had a French cook, and fared well. The price of provisions is here, beef eighteen quarts, mutton twenty, kid eighteen, bread eleven for a pound of thirty-two ounces, wine ten quarts the quartillo.

From hence, after dinner, we proceeded over the downs, admiring their extreme fertility, of which, in a few cultivated spots, we were able to judge by the luxuriant crops of beans then in full blossom; these were well hoed. As we approached Ecija, the sace of the country improved, cultivation appeared to be carried on with spirit, the oxen became remarkable for beauty and for size, and the plantations of olives shewed the richness of the soil.

The rock is a pudding stone, and therefore, with the smooth tumblers above described, prove to a demonstration that the whole country partook of the grand revolution, to which I have so frequently referred.

Ecija is eight leagues from Cordova. It is delightfully fituated on the banks of the Xenil, with pleasant walks, serving, like those of the great cities in Spain, for the evening resort. It contains twenty-eight thousand

thousand one hundred and seventy-fix souls, and has fix parish churches, eight chapels, twenty convents, and fix hospitals.

The churches, built entirely of brick, are fitted up in the old taste, and crowded with pillars, which are loaded with preposterous ornaments, and covered with gold. The most extravagant of all is the church of nuestra Senora del Rosario, in the convent of the Dominicans; this may serve as a model for the perfection of vitiated taste.

The Plaza Mayor is a fine object, very fpacious, and much to be admired for its balconies, occupying the whole front of the houses.

When we arrived, we found every one engaged in talking over a defeat which the king's troops had fuffered the preceding day from the fmugglers, near one hundred of whom, well armed, entering the city, had driven away the military, had killed one man, and had then, unmolested, sold their snuff to the inhabitants. This violence was more than usual, and proceeded from the bad policy of government, in raising the price of tobacco from thirty to forty reals the pound, whilst

whilst the illicit trader purchased the same commodity in Portugal for eight. With fuch encouragement for defrauding the revenue, it will never be possible to prevent this trade; and whilst men have such powerful inducements to violate the laws, no government, how strenuous soever its exertions, and how cruel foever the punishment inflicted on offenders, will ever be able to maintain a good police. In Spain, unless it be accompanied with murder, the penalty for fmuggling is commonly a confinement for feven or ten years to hard labour in the prefidios; where, by communication with profligate and hardened villains, who are under fimilar correction, they are prepared for the perpetration of the most atrocious crimes; and, thus qualified, they are turned loofe upon the public. Previous to this part of his education, the fmuggler feldom robs on the highway, unless when he has been plundered, and is distressed for want of horses, of money, or of arms. In such circumstances he becomes outrageous, and frequently begins with murdering the traveller whom he means to rob.

Farmers in this vicinity rent dear, paying commonly

commonly two bushels of wheat and one of barley for every bushel of their feed; or if they pay a stipulated sum of money, it is not immediately to the land-owner, but, as under-tenants, to rich land-jobbers; and therefore they can expect no moderation. Farms, if inclosed, let much higher than those which are open, because the latter are liable to be fed by the Merino sheep; whereas, should they enter the former, onefifth of the number trespassing would be forfeited. This, however, proves a neverfailing fource of quarrels and contentions between the occupiers of land and those who may be called graziers, that is, the proprietors of the Merino flock, who, under the fanction of a peculiar code, claim the privilege of feeding, not only in the common pasture, but even in plantations of olives. The murders confequent on these quarrels have been more than two hundred in the space of a few years; and the litigations have cost the contending parties more than the value, both of their sheep and of their olives. The council of Castille interfered, in the year 1570, to prohibit this; but the great sheep-masters plead their privilege. vilege, as granted by the Mesta code, and support their claim by force.

Throughout the whole province of Andalufia, cities and boroughs have immenfe possessions, in many instances extending to the distance of three leagues from them every way, including thus more than two hundred thousand acres, either of waste land, or of fuch as might be cultivated, if it were not too remote from the habitation of the farmer. Of these, not one-fourth part is broken up by the plough; and that which remains uncultivated rather checks than promotes the breed of cattle. In short, according to the opinion of the best patriots in Spain, Andalusia is ruined by high rents, and by common pastures. (V. Memorias de la Sociedad Economica, Madrid.)

February 25. At five in the morning, we left Ecija, and followed the Roman causeway leading from Cordova to Seville, till we came to Carmona. The country through which we passed belongs to the crown, and will be improved as fast as emigrants can be induced to come. At present little is cultivated, and that little, bears the face of wretchedness, exhibiting ruined cot-

A THEFT

tages, and half-naked peafants. We conversed with a Frenchman, who had been here eighteen years, and during that period had been often removed from his plantation, because, by his diligence and skill, he had improved his allotment, which being given to flovens, he was compelled to take new land. It is true they always gave him what they considered as an equivalent, not intending to injure him, but meaning only to avail themselves of his superior application and abilities; yet, in the end, they reduced him to poverty, and broke his spirit. This, he informed us, was no uncommon case; and, from the mifery every where visible in these new colonies, I am inclined to credit his report.

The botanical productions are chiefly the ilex, the myrtle, the gum ciftus, the lavender, a species of the Daphne, and a plant called *lentifcus*.

Carmona is built on a declivity, looking down upon a rich valley, which is bounded by distant hills, excepting only to the south, where a wide opening gives passage to the Guadalquivir.

It contains twelve thousand fix hundred and eighty-five souls, and includes seven parish parish churches, with five convents for men, two for women, and two hospitals. Here they reckon more than a hundred oil-mills.

As foon as we arrived, although the fun was fet, I took horfes, and went off for Seville, that I might have a comfortable bed. The diffance is fix leagues, or about twenty miles, and the charge was one hundred and twenty reals, or four-and-twenty shillings, including the licence, which must always be taken out when you begin a journey with post horses.

It being dark, I could not fee the country, but I found that it was level, that the foil was fandy, and, by the inceffant croaking of frogs, I concluded that every ditch was full of water.

At ten in the evening I arrived at Seville, well contented with my horses, having travelled the fix leagues in little more than two hours. Indeed, no horses can move more pleasantly than those of Andalusia, cantering the whole way, without needing either whip or spur. I took up my lodging at the posada de la Baviere, and slept more comfortably than I had done since we left Madrid.

SEVILLE.

S E V I L L E.

THE morning after my arrival I examined my letters: among the perfons of distinction and authority to whom I was recommended, I judged, as an ecclefiaftic, my first attention to be due to the archbishop, and therefore I hastened early to his palace. He received me with politeness, permitted me to kiss his ring, made me fit down, and then, having read my letter, he told me, that as long as I continued at Seville I must dine every day with him, unless when I should be more agreeably engaged. After some little conversation, he defired to see the address of my other letters, and calling a page, he ordered that a coach should be got ready, and that one of his chaplains should attend me, to deliver my letters, and to shew me every thing worthy

of attention in the city. When I left him; he defired me to come back to dinner, telling me, that during my stay, that coach would be wholly at my fervice. Agreeable to this invitation I returned, and not only dined with him that day, but almost every day during a fortnight's refidence at Seville. I was indeed often preffingly invited by other families; but, as it was the feafon of lent, and as fish, in Spain, never agreed with me. I declined their invitations. At the archbishop's table were many aged perfons, who were supposed to be infirm, and therefore for them were provided a variety of dishes, such as others did not feel themfelves at liberty to touch. To this circumstance I reckon myself indebted for returning health; because, for want of custom, and in a weakly condition at the time, I should never have been able to endure a fast, which, with the exception of the intervening fabbaths, is in fact, although not by precept, a fast of forty days.

The archbishop is well lodged, and keeps a hospitable table. He is quite the man of fashion: his manners are engaging, and his conversation lively. His usual Vol. II.

company at dinner was his confessor, his chaplains, his fecretaries, and a few friends. He was attended by his pages, who are generally young men of family, recommended to his patronage, and educated under his infpection. The librarian fometimes fat down at the table, at other times waited behind a chair. He was commonly my guide, and with him I visited every corner of the city.

Seville stands on the banks of the Guadalquivir, in the midst of a rich, and, to the eye, a boundless plain. It is surrounded by a wall of more than a league in circumference, with one hundred and feventy-fix towers. Over one of the gates is the fol-

lowing infcription:

Condidit Alcides, renovavit Julius Urbem, Restituit Christo Fernandus Tertius, Heros.

Which, over another gate, is thus tranflated:

> Hercules me edifico Julio Cefar me cercò De Muros y torres altas; Y el Rey fanto me gano Con Garci Perez de Vargas.

The streets are narrow, and some of them so contracted, that you may touch both walls at the same time. Few are wide enough for carriages; and many, through which coaches pass, shew, by the deep surrows in the walls, that one nave touched, and often both at the same time.

Seville is faid to contain eighty thousand two hundred and fixty-eight souls, and is divided into thirty parishes. It has eightyfour convents, with twenty-four hospitals.

Of the public edifices, the first to demand attention is the cathedral, a building of fingular magnificence, but admired chiefly for its tower, the work of Güever, the Moor. He made it originally two hundred and fifty feet high, but A. D. 1568, it was raised one hundred more, and is therefore, at prefent, three hundred and fifty feet. It has no steps, nor are they wanted; because the inclined plain is fo eafy of afcent, that a horse might trot from the bottom to the top; at the same time it is so spacious, that two horsemen may ride abreast. On the top of this tower is the Giralda, or large brazen image, which, with its palmbranch.

branch, weighs near one ton and an half, yet turns with the slightest variation of the wind.

The dimensions of the cathedral are four hundred and twenty feet, by two hundred and fixty-three; and the height is one hundred and twenty-fix. It was built A. D. 1401. It receives light by fourscore windows with painted glass, the work of Arnao, of Flanders, each of which cost one thousand ducats.

The treasures of this church are inestimable: one altar is wholly filver, with all its ornaments, as are the images, large as life, of S. Isidore and S. Leander, and a custodia or tabernacle for the host, more than four yards high, adorned with eight and forty columns; yet these are trifling in value, when compared with the gold and precious stones deposited by the piety and zeal of catholics, during the period in which all the wealth of a newly-discovered world flowed into this city. The profufion of gold, of filver, and of gems, would be more striking, were not the attention occupied and lost in admiration of innumerable pictures, the works of those Spanish mafters

masters who flourished, immediately after the revival of the art, in Seville. Every chapel preferves fome monument of their fuperior skill; of these, the most conspicuous are of Luis de Vargas, and of Fr. Zurbaran, but chiefly of Murillo. By the last is a Nativity in the chapel of the Conception, and, near the baptismal font, S. Anthony of Padua, with the Baptism of Christ. In the principal facristy, are his much-admired pictures of S. Isidore, with his brother S. Leander: and in another facrifty, his Holy Family, with an Ecce homo by Morales. The chapter-house is wholly devoted to Murillo, and the chapel of S. Peter is given up to Zurbaran. The works of Luis de Vargas are dispersed in various places; but his famous picture, called de la Gamba, is in a chapel near the gate of S. Christopher, and merits particular attention.

To the cathedral belongs a library of twenty thousand volumes, collected by Hernando, son to Christobal Colon, the first discoverer of America, a man of taste, and much admired in his day for learning. It is to be lamented, that modern pub-

U 3 lications

lications have not been added to complete what was fo well begun by him.

I was much pleafed with the construction of a new organ, containing five thoufand three hundred pipes, with one hundred and ten flops, which latter, as the builder told me, is fifty more than are in the famous one of Harlem; yet, so ample are the bellows, that, when stretched, they supply the full organ fifteen minutes. The mode of filling them with air is fingular: instead of working with his hands, a man walks backwards and forwards along an inclined plain of about fifteen feet in length, which is balanced in the middle on its axis; under each end is a pair of bellows, of about fix feet by three and an half; these communicate with five other pair united by a bar, and the latter are so contrived, that when they are in danger of being overstrained, a valve is lifted up, and gives them relief. Paffing ten times along the inclined plain fills all thefe veffels.

In the cathedral are eighty-two altars, at which are faid daily five hundred maffes. The annual confumption is fifteen hundred

[295]

dred arrobas of wine, eight hundred of oil, and of wax about one thousand.

The wealth belonging to this chapter may be estimated by the numbers that are

supported by it.

The archbishop, with a revenue of three hundred thousand ducats; or, in sterling, nearly thirty-three thousand pounds a year.

Eleven dignitaries, who wear the mitre on high festivals, amply, but not equally, provided for.

Forty canons of forty thousand reals, or about four hundred pounds each, per annum.

Twenty prebendaries, with an income of thirty thousand reals each.

Twenty-one minor canons, at twenty thousand reals each.

Beside these, they have twenty chanters, called Veinteneros, with three assistants, called Sochantrès, two beadles, one master of the ceremonies, with a deputy, three attendants to call the roll and mark the absentees, thirty-six boys for singing and for the service of the altar, with their rector, vice rector, and music masters; nineteen

U 4 chap-

chaplains, four curates, four confessors, twenty-three musicians, and four supernumeraries; in all, two hundred and thirty-five.

Many of the convents are remarkable for the beauty of their architecture; but, in Seville, the eye covets only pictures, and amidst the profusion of these, it overlooks works, which, in other fituations, would rivet the attention, and every where fixes on the pencil of Murillo. His most famous performances are in the Hospital de la Caridad, and, fuited to the institution, express fome act of charity; fuch as, the miracle of the Loaves and fishes; the Smiting of the Rock in Horeb; the Pool of Bethefda; the Reception of the returning Prodigal; Abraham addressing the three angels, and preffing them to enter his habitation; the Deliverance of Peter from the Prison; and Charity, in the person of Elizabeth, washing the wounds and curing the diseases of the poor. Beside these, in the same hospital, is the Annunciation of the bleffed Virgin; and two little pictures, the one of the infant Jesus, the other of John.

The church of the Capuchins is richly furnished

furnished with his works; and, although in these the composition is more simple than in the former, yet they may be confidered as fome of the best of his productions. Eleven of his pictures are to be feen in a chapel called de la vera Cruz, belonging to the Franciscans. These do much credit to his pencil; and, not inferior to them, are many preferved in other convents; such as, an Ecce homo, and the bleffed Virgin, with the infant Jesus, in the church of the Carmelites; the Flight into Egypt, in that of la Merced Calzada; a rich variety of fubjects in S. Maria de la blanca; and S. Augustin writing, with S. Thomas of Villanneva, stripping himself to clothe the poor, in the convent of the Augustin friars, near the gate of Carmona. In my opinion, the most masterly of all his works is in the refectory of an hospital designed for the reception of superannuated priests. It reprefents an angel holding a basket to the infant Jesus, who, standing on his mother's lap, takes bread from it to feed three venerable priests; no representation ever approached nearer to real life, nor is it poffible to fee more expression than glows upon that

that canvass. In the parochial church of Santa Cruz, are two pictures in a superior stile, a Stabat Mater dolorosa, which excels in grace and softness; and the samous Descent from the Cross, of Pedro de Campaña, which Murillo was accustomed daily to admire, and opposite to which, by his own directions, he was buried.

This great painter was born A. D. 1618, and died in 1682.

His name stands high in Europe; but to form an adequate idea of his excellence, every convent should be visited, where he deposited the monuments of his superior skill.

In exactness of imitation he was equalled, in clara obscuro, and in reflected lights, he was surpassed by Velazquez; but not one of all the Spanish artists went beyond him in tenderness and softness.

In vifiting the convents, and in viewing their pictures, I had the happiness to have for my guide D. Francisco de Bruna, a gentleman distinguished for his judgment and his taste, who had studied the peculiar excellence of every master, and was perfectly acquainted with the merit of each work.

work. He has himself a well-disposed collection of the best Spanish painters, natives of Seville, or educated there; such as, Luis de Vargas, Velazquez, Zurbaran, Valdez, and Murillo, beside many of the Italian and of the Flemish schools.

The house in which they are deposited, and in which he lives, was once the refidence of Moorish kings, and, as such, was called Alcazar. It is an irregular building, but commodious and pleasantly situated, comprifing many large and well-proportioned But, as it is fufficiently described by travellers, I shall not add to their defcriptions. The garden is fingular, and, having retained its pristine form, it is meant to ferve as a model of the Moorish taste. It is laid out in alleys, with clipped myrtle hedges, and in the middle of the parterres are fingle trees cut into the form of warriors, with spiked clubs. Its principal fruits are oranges and lemons. The whole of this pleafure-garden, together with the palace and the court-yard, is furrounded by a strong rampart, communicating with, but much higher than, the city wall; and beyond this is an orange-grove of considerable extent. For the winter and for the fpring, there cannot be a more delightful refidence.

In speaking of pictures, I have confined myself chiefly to Murillo, because of his superior excellence, and because Seville, the place of his nativity, may be considered as the principal depository of his work. But although eminent, he by no means stands alone. This once famous school, in which the art revived at the beginning of the sixteenth century, has produced a multitude of good painters. Among these, stand foremost Luis de Vargas, Velazquez, Herrera, Roelas, Zurbaran, Francisco Pacheco, and Valdez, with many others universally admired.

The works of these great masters, and of various foreigners, as well as of native Spaniards, are to be met with, not only in the churches, but in the houses of the principal inhabitants. Among these, I visited the collections of the marquis of Moscoso, of D. Pedro de Castro, and of D. Donato de Arenzana. In the possession of the latter is, perhaps, the most perfect representation that was ever painted upon canvass: it is a lamb,

lamb, by Zurbaran, with which Velazquez was so much struck, that he took the pains to copy it. This I had seen in the possession of D. Fr. de Bruna; but when I had viewed the original, the copy, much as I had before admired it, sunk in my estimation. D. Donato has, beside this, a good head by Morales, a Conception by Guido, a most incomparable portrait of S. Ignatius Loyola by Careño; the Descent from the Cross by Luis de Vargas, and the Death of Abel by Bobadilla.

Of the convents, that which is upon the most extensive scale belongs to the Franciscans. It contains fifteen cloifters, many of which are elegant and spacious, with apartments for two hundred monks; but at prefent they have only one hundred and forty in their community. Thefe, like all of their order, are fed by charity, and are much favoured by the people. Their annual expenditure is more than four hundred thousand reals. or in sterling about four thousand pounds, amounting to twenty-eight pounds eleven shillings and five pence for each. But then out of this must be deducted the expence of wine, oil, and wax, with the alms diftributed

tributed daily to the poor, which all together is confiderable.

Not one of the convents is equally frequented as this, more especially during the forty days of Lent. In the principal cloifter, which is intirely inclosed by a multitude of little chapels, are represented, in fourteen pictures, each called a flation, all the fufferings of the Redeemer. These are fo arranged as to mark given distances by walking round the cloifter from the first to the fecond, and fo in order to the reft. Over them is mentioned the number of fteps taken by our Lord between the feveral incidents of his passion in his way to Calvary, and these precisely are the paces measured for the penitents in their progress from one station to another. Over one is the following infcription: " This station " confifts of 1,087 steps. Here the bleffed " Redeemer fell a fecond time under the " weight of his cross, and here is to be " gained the indulgence of feven years and " forty quarantines. Mental prayer, the " Paternoster and the Ave Maria." This may ferve as an example for the rest. I obferved men; women, and children, rich and poor, poor, going their rounds, fome folitary, others in little groups, repeating aloud their Latin prayers, and kneeling at every station in regular succession.

Among all the hospitals I was most pleased with that of la Sangre, designed for the reception of semale patients. The front is elegant, and the sculpture is much to be admired, more especially the three sigures of Faith, Hope, and Charity. The wards are spacious, and the whole is remarkable for neatness.

Were I inclined to enlarge in my deferiptions of the public buildings, the Torre del Oro, the Plaza de Toros, the Aqueduct with its four hundred and ten arches, but more especially the Exchange, would afford me ample scope. The latter, planned by Herrera (A. D. 1598,) and worthy of its great architect, is a quadrangle of two hundred feet, with a corridor or spacious gallery round it, adorned with Ionic columns, and supported by an equal number of Doric.

The university was founded in the year 1502, and soon rose into consideration. The name of Arias Montanus, who lies

buried at the convent of S. Jago, is alone fufficient to give celebrity to this feminary. His translation of the holy Scriptures will be valued by the learned, as long as the Scriptures themselves shall be the objects of veneration to mankind. The number of under-graduates here is about five hundred.

We meet at Seville with the favourite institutions of Count Campomanes, his academy for the three noble arts of painting, sculpture, and architecture, and his economical society of the friends of their country. Both these have been attended with success, and have given affistance not only to the arts, but to agriculture, to manufactures, and to commerce. About two hundred pupils attend the former.

The principal manufacture is fnuff. To this I paid particular attention. The edifice, elegant and fimple in its form, is about fix hundred feet by four hundred and eighty, and not lefs than fixty feet in height, with four regular fronts, inclosing twenty-eight quadrangles. It cost thirty-seven millions of reals, or about three hundred and seventy thousand pounds. At present, no more than

than seventeen hundred workmen are employed, and one hundred horses or mules; but formerly, three thousand men were engaged, and near four hundred horses. This falling off is attributed to mismanagement, and to the reluctance with which they confented to destroy their damaged tobacco. They have now changed this fystem; and, not many days before my arrival; they condemned to the flames fifteen thousand pounds weight as unfit for use. Yet the high price of the commodity restrains the fale; for, fince they raifed the tobacco from thirty to forty reals, that is, from about fix to eight shillings a pound, the demand has gradually lesiened. From the year 1780, the annual fale has been, of tobacco from Brazil, one million five hundred thousand pounds, purchased from the Portuguese, at three reals a pound; and of fnuff, from the produce of their own colonies, one million fix hundred thousand pounds, beside cigars to a very confiderable amount. They have lying by them, more than five millions of fnuff unfold; but, as it will not fuffer by age, they are not uneafy at this accumulation. Beside the peculiar kind of snuff, with VOL. II. X which

which Spain was accustomed to supply the market, they have lately introduced the manufacture of rappee. There was a neceffity for this, in order to put a stop to an illicit trade: whilft the king was felling at fixty, and fometimes at fourfcore reals a pound, the fmugglers fold the fame commodity at forty, having themselves purchased it in France, from the farmers of tobacco, at fifteen; but, now that government fells good rappee at twenty-four reals, the fmuggler's profit will not compensate for the risk. In this branch alone are employed, at prefent, two hundred and twenty people, old and young, with fixteen mules; but they mean to push their trade, when they can get a fufficient quantity of tobacco, and to engage five times as many hands. The operations are fo numerous before the rappee is fit for market, that they require a multitude of workmen. Whilft fome are employed to unbind the little bundles of tobacco, others are occupied in picking the leafy substance from the hard stems. Some are engaged in dying, others either in straining and preffing, or in spinning the leaf into ropes, and winding it up into rollers to be

be faggoted and pressed, till a parcel of eighteen inches long, and two and an half inches in diameter, will weigh fix pounds. These operations being finished, it is laid in heaps to sweat nine months; after which, it is cut and sifted, then grated, once more sifted, and finally packed up in canisters for sale.

All the workmen deposit their cloaks at the door, and, when they go out, are so strictly examined, that they have little chance of being able to conceal tobacco; yet they sometimes venture to hide it about their persons. An officer and a guard is always attending to take delinquents into custody; and, that they may prevent resistance, no workman is permitted to enter with a knife. Were it not for this precaution, the consequence of a detection might be fatal.

The whole business is conducted by a director, with a salary of forty thousand reals a year, and fifty-four superior officers, affisted by as many subordinate to them.

For grinding their fnuff, they have forty mills, each confifting of a stone-roller, moved by a large horse, or mule, with the

X 2

traces fastened to a beam of eight feet in length, in the angle of forty-five degrees, confequently losing precifely half his force. I endeavoured to explain this to the officer who conducted me through the works, but he could not comprehend it. He is brother to the unfortunate young woman, who, in the year 1774, at S. Lucar, bled before the altar, a victim to the unhallowed paffion with which her beauty had inspired the priest. This wretch, whilst receiving her confessions, had declared himself her lover; but, at last, enraged at the obstinate resistance of a virtuous mind, he turned his back upon the altar, where he had been partaking of the confecrated bread, and stabbed her, in the presence of her mother. For this most atrocious of all crimes, he was fhocking to relate! - fuffered to live in banishment at Porto Rico.

The filk manufacture was formerly confiderable in Seville. When Ferdinand III furnamed el Santo, (in the year 1248) entered the city, he found, as it is faid, fixteen thousand looms, which employed a hundred and thirty thousand persons; and such was the population of the city, that the Moors.

Moors, who left it when it was furrendered to the Christians, were four hundred thou-fand, beside multitudes who died during a sixteen months siege, and many who remained after their sellow citizens were gone.

Alfonzo, furnamed el Sabio, feeing the importance of this manufacture, gave it every poffible encouragement; and, trade being chiefly confined to Seville, on the first discovery of America, (A. D. 1519,) they once more reckoned fixteen thousand looms; but the millones, imposed at the latter end of the reign of Philip II. to defray the expence of his wars, gave a shock to commerce, and the frequent alteration in the relative value of their money, with the expulsion of the Moors, almost ruined this once wealthy city. Added to this, in the year 1649 more than two hundred thoufand persons died of an epidemical disease in Spain. In confequence of these misfortunes, (A. D. 1655,) there remained only fixty looms in Seville. After the accession of a new family, the weavers amounted (A. D. 1713,) to four hundred and five: but in the year 1721, the farmers of the

X 3

tax on filk having collected with rigour the fourteen per cent. for the alcavala and cientos, they not only ruined the manufacture, but reduced the revenue from eight hundred thousand reals to less than fixteen thousand. Philip, however, giving attention to this important bufiness, trade revived, and (A.D. 1732) the looms amounted to one thousand. War with England reduced them fuddenly, and A. D. 1739 they were only a hundred and forty. Since the remonstrances of Bernardo de Ulloa. (A. D. 1740) the taxes have no longer been left to the rapacity of farmers, the alcavala has been taken off; and, by the last account, the looms amounted to four hundred and fixty-two for wide filks, with one thousand eight hundred and fifty-fix for other purposes. Each loom is allowed annually, if for wide work, a hundred pounds of filk duty free; if for narrow, they receive fourfcore.

Whenever the navigation of the river shall be restored to the condition in which it was when Magellan with five ships sailed from hence for those straits, which have been called by his name; and when freedom

dom, civil and religious, shall once more lift up her head in Spain; new channels will be opened for reviving commerce, and Seville will be restored to her ancient splendor.

The art of tanning is perhaps no where fo ill conducted as in Spain; in no part of which can good leather be procured, unless it come from England. Senfible of this, the minister of finance became anxious to induce some stranger, skilful in the business, to take up his residence in Spain. Whilst he had this idea in his mind, chance threw in his way a tradefman travelling to receive orders, and to get in debts for himfelf and partners, who, as leather-cutters, have a shop on Snow-hill, in London. It immediately occurred to the minister, that he had found his man; and therefore, fending for him, without loss of time, he invited him to fettle as a currier and a tanner. This gentleman, conscious to himself that he was not properly qualified to conduct a business to which he had not been bred, withstood his folicitations, and refused the most advantageous terms: but at length, after confidering the matter in every point

of view, he accepted the offer, and confented to establish himself at Seville. I vifited his tan-yard, and found him happy in the protection he enjoys. The minister has given him the convent of the Jesuits, and about feven acres of good land, rent free, with the pre-emption of hides from Buenos Ayres, and of all skins from the Spanish settlements; beside the privilege of cutting down, for bark, all the trees growing, either in the royal forests, or on the lands of private perfons, within a given distance of the city. He uses the inner bark taken from the cork-tree, with myrtle leaves, which ferve his purpose tolerably well; yet are by no means equal in strength to the bark of oak. He fays, that the Spaniards understand the art of tanning; but that they want spirit, industry, and capital for fuch extensive undertakings; and I am inclined to think, that his observation is well founded. Finding him a man of activity, with a command of money, the minister has given him a contract to furnish boots and belts for the cavalry, and a variety of other articles, fuch as spurs and buckles, not connected with his peculiar trade. trade. He is certainly a treasure to the Spaniards, both for application and for weight of capital, and, I have no doubt, will push this new establishment as far as it can go, provided government shall continue to protect him.

Having been introduced to D. Juan Alvarez, the intendant of the mint, I visited his office, in which at present a sew workmen find occasional employment; whereas formerly one hundred and eighty were constantly engaged. They have here the same slow process as at London and in Paris, in consequence of which their coinage is expensive; whilst in Birmingham the operation, by a new invention, is expedited, and performed at a trisling expence.

In traversing the streets, I was struck with the multitude of beggars clothed in rags; and was at first inclined to attribute this to the decay of trade; but, upon examination, I found a more abiding cause in the distribution of alms at the archbishop's palace, and at the gates of twenty convents, daily, and without distinction, to all who make application for relief. Such misplaced benevolence is a bar to industry, and multiplies

multiplies the objects of distress, whose numbers bear exact proportion to the provision made for their support. To have this principle rightly understood is of such importance, that I can never let one opportunity escape of bringing it into view.

My time passed away pleasantly at Seville. The mornings I employed in viewing whatever was most worthy of attention in the city, or in little excursions to the country. At noon I paid my respects to the good archbishop, dined and took the Siesta at his palace; after which I fometimes went out in the carriage with his grace, at other times joined the company in the Alameda, or public walk; and closed the day either with the archbishop, or in the family of some cheerful friend. The seafon of Lent is not favourable to gaiety, because it does not admit of the usual diverfions; yet I had always reason to be satisfied with my evening's entertainment. The archbishop received only gentlemen for conversation. In other houses they have generally fome round game at cards; but the family, in which I delighted most, was that of a canon, for whose fifter I had the

the honour to be confulted as a physician. The case was highly interesting; an epilepsy, arising from extreme sensibility; and I pleased myself with the idea, that I was useful to her. My recompense was to enjoy her conversation, and to hear her sing.

In one of my morning vifits at the archbishop's palace, I had the satisfaction of being prefent at an opposition, or disputation, between the candidates for a vacant benefice; a scene admirably described by the author of Gil Blas. Vehemence, on fuch an occasion, is not only fanctioned by custom, but is certainly excusable, in men who are contending, not merely for fame, but bread. The judges are the diocefan, affifted by fix of the chapter; and the examinations are in the sciences, ethics, divinity, and canon law. Many ecclefiaftical preferments are disposed of in this way. Thus in every cathedral four canons are chosen by opposition, and are said to be de merito; these are, the penitentiary, for receiving the confessions of the chapter; the preacher; the professor of theology; and the civilian, who conducts their law-fuits. The rest are given through favour, either

by the diocesan, the chapter, or the king, according to the month in which the vacancy happens.

When a candidate makes application to the great, either for protection in general, or upon a special occasion for preferment, he presents a printed memorial, which he stiles " Relacion de los Meritos, titulos, grados y exercicios literarios de A. B." containing his name, the place of his nativity, his rank, his age, the univerfity in which he studied. with the degrees he has taken, his acquirements, his conduct in his profession as a priest, as a preacher, and as a confessor; fetting forth his regularity, his zeal, and his fuccefs, with his peculiar privileges, fuch as that he is permitted to read the prohibited books, and to confess both sexes; and stating, finally, that he is every way qualified to receive any ecclefiaftical preferment to which he may be presented.

One day, when I was at the archbishop's palace, the old librarian took me aside, and requested me to make application for him to obtain a living then vacant, and in the gift of the crown, desiring me to write immediately to count Florida Blanca, and to inclose

his Relacion de meritos. This, I remember, ftated, in the list of his acquirements, that he had learnt Hebrew, that he had been examined in the verbs, but that he had never been rich enough to purchase a lexicon. I made the application through our minister, and obtained the promise of a living for him, but not that for which he then solicited.

Not far from the city is a building, now verging to decay, near to which I often passed, without asking for what it was defigned; but, one evening, walking with the gentleman to whom I had been recommended by count Florida Blanca, struck with its form, I defired him to tell me what purpose it had served. At first he seemed to pay no attention; but, upon my repeating the question, I received an evalive answer. fuch as tended only to awaken my curiofity, and to make me more urgent with him for information. At last he told me, that this strange kind of edifice is called el Quemadero; but begged that I would never difclose to any one, from whom I had received my information. The name was fufficient, together with the form, without further enquiries.

enquiries, to explain the horrid use to which it had been too often put. I urged him no further on the fubject; and, without loss of time, haftened from a fpot which my imagination painted all in flames. The next day, however, I returned with one of the judges, who, as fuch, could venture to be more communicative. In answer to my questions, he informed me, that the Quemadero, fo called from the verb quemar, to burn, ferved the purpose of a scaffold for burning heretics; and that, about four years before, a woman had fuffered on it, by a fentence of the inquisition, to which he had given his fanction. From him, and from others, I obtained the following particulars. This woman was a beata, profeffing one of the three vows imposed on nuns, of which, poverty and obedience are the regular companions; yet that vow she broke. In the accufation she was charged with having corrupted her confessor; who, poor man! as the least culpable of the two. was merely banished. Had this been her fole offence, it had been punished with less distinguished severity; but, not satisfied with having been guilty of facrilege in one instance.

instance, she went on corrupting the priest-hood; and, either from passion or from vanity, extended daily, over the servants of the altar, the dominion of her charms; till, either by pride, or by remorse of conscience, she lost her understanding, and soolishly imagined that she was acting under a divine authority. Some say, that she vindicated her conduct upon the principle, that both parties were free from obligation; but others, and more justly, say, that she pretended to have seen an angel. This being a crime within the cognizance of the inquisitors, she was brought to trial, was convicted, and was burnt.

Excited by this narration, I had the curiofity to vifit the court of the inquifition. It was formerly a convent of the Jefuits, and is fo light and elegant, that I could fearcely conceive it to contain the dreadful tribunal and gloomy dungeons. I went into the chapel, and the hall of judgment, and ventured to afk fome questions; but could obtain no answer: filence and folitude seemed to have established their dominion there.

The inquisition is certainly less formidable now, fince light is every where diffused, than it was in darker ages, when fuperftition reigned; and the inquisitors of the present day, if not more humane, are at least more humble, than their predecessors in remoter periods. Yet we must confess, that, whilst their authority remains, it will be ever fubject to abuse. Every one knows the history and the fate of Don Pablo Olavidé. The real cause of his difgrace, was neither his impiety nor his immorality, but his hatred of the monks; who, in return, became his implacable enemies, and never ceased to persecute him, till they had banished him from Spain. They never could forget, that in the Sierra Morena he had built his house precisely on the spot where had stood a convent, a convent which ferved as an afylum for the robbers. with whom the venerable fathers had been accustomed to divide their plunder. Nor could they forgive his having made it a fundamental law of his new fettlements, thae they should have no monks. Unfortunately, he had married a rich woman, who was neither young nor handsome, and, by her means, the monks became acquainted with fuch circumftances as might have otherwife

otherwise escaped them, and were enabled to treasure up against him every unguarded expression, which at any time escaped his lips. This valuable citizen was taken out of his bed, the 14th of November, 1776, and, after being shut up twelve months in the prison of the inquisition, his sentence was publicly read; all his effects were consistent of the use of the inquisitors his judges, and he was condemned to eight years confinement in a convent.

It must be confessed, that in the person of Olavidé, the inquisitors slew at noble game; but, a sew years after this, they resembled the eagle, when she stoops to seed on carrion. The history of this transaction is worthy to be recorded. I shall, therefore, give it from the relation of one who was present at the Auto de Fé, celebrated in the conventual church of S. Domingo, in Madrid, the 9th of May, 1784, when the whole process was publicly read.

The principal actor in this farce was Ignacio Rodriguez, a beggar. The first profession of this man was arms; but of his conduct in that line little has trans-

Vor. II. y pired.

pired. It is certain, that he was with count O'Reilly in the unfortunate expedition against Algiers, where he was wounded in the leg. In consequence of this he was discharged as an invalid, and had an offer of the usual pension; but he chose rather to cast himself on the public, and to enjoy his liberty, than to be lost in obscurity with his companions. For this purpose, he was careful to keep his wound from healing; and, such was his address, that he procured a comfortable living, or rather, as it appeared, fared sumptuously every day.

After some years, he was so unfortunate as to attract the attention of D. Bernardo Cantero, the intendant general of the police, who, seeing him from day to day, enquired for what reason he kept his wound open, and ordered him to have it healed. Rodriguez, not knowing to whom he spoke, replied with insolence, "I ask alms, and not advice." This ill-timed answer proved his ruin.

The intendant, struck with his appearance, and offended with his infolence, watched him, and having observed something uncommon in a long conversation

between

between him and a female, called Juliana Lopez, caused her to be followed, and arrested. This woman, although artful, being taken by furprife, was confused, and foon confessed, that the paper she had delivered to the beggar contained fome materials for making love powder. On this evidence Rodriguez was taken into custody, with another female named Angela Barrios, who, being a woman of inferior talents, acted under them, and was employed only in commissions of no great importance. All three being committed to the common jail, were frequently questioned, and the result of their examination was laid before the king, who, by the advice of his confessor, referred the matter to the inquisitors. In consequence of this the prisoners were removed, and confined in the prison of the inquisition.

No tribunal has fuch advantages in tracing out the truth, nor can any other investigate a dark transaction with such a certainty of success as this court. Unsettered by forms, and not limited for time, they are at liberty to bring whom they please before them, to take them from their beds in

the

the middle of the night, to examine them by furprife, to terrify their imaginations, to torment their bodies, and to cross examine them at distant periods. With these advantages, the impostor was foon made to confess the whole of his practices, with all the most minute particulars, and the names of the parties to whom he had fold his powder. He explained, in his confession, the materials of which he had composed it; but these, to a modest ear, should never have been mentioned; and he acknowledged, that every female, after taking it, had been obliged to grant him whatever he chose to ask, without which the charm was to have no effect. Whenever he adminiftered it, he muttered fome necromantic formula, that he might give an air of myftery to the transaction, and inspire the mind with confidence in its fuccefs.

Juliana Lopez, his affociate, ferved him as an emissary and a panegyrist; and that she might in all respects lend herself to his views and to his wishes, she hired a convenient garden, to which he might retire at all seasons whenever it suited his convenience.

Angela Barrios acted as a fervant to the others, and being of a weak understanding, was never admitted to their confidence. Fidelity and filence on her part were sometimes however requisite, and in these she never failed.

The process, according to custom, contained the most minute particulars. Their erimes were proved by a multitude of testimonies, and their guilt was confirmed by their own confessions. From these it appeared, that his powder was administered to persons of all ranks; and one of the inquisitors has since informed me, that many ladies of high fashion in Madrid were duped by him, although out of tenderness their names had been concealed.

When the process was gone through, the judges resolved to celebrate an Auto de Fé publicly in the church of the Padres del Salvador, but the king would not confent that the nuns of S. Domingo should lose their privilege of having the Auto in their church. The inquisitors gave way, but sent a request, that the nuns might not be admitted to the grate, lest their ears should be offended, and the purity of their imagina-

imaginations should be defiled. This meffage had the effect which might have been expected. Their curiofity was the more excited, and of all the nuns four only were absent from the grate.

On the day appointed, at fix in the morning, the people began to affemble in the street of the inquisition, and the troops took their station to preserve good order. About eight the beggar left his dungeon, leaning on his crutches, and attended by a capuchin friar of no respectable appearance. named Father Cardenas. As foon as he appeared in court, he fell upon his knees before one of the inquisitors, who with the greatest mildness and gentleness addressed him thus: " My fon, you are going to " hear the relation of your crimes, and the " fentence pronounced for the expiation " of your guilt. Our lenity is great, be-" cause our holy tribunal, always most in-" dulgent, feeks rather to reform than " punish. Let your forrow flow from " your consciousness of guilt, and not from " a fense of the difgrace you fuffer."

This exhortation ended, which is the same, even when the criminal is committed

over the shoulders of the beggar his san benito, or more properly his faco bendito, being the sackcloth with S. Andrew's cross, anciently worn by penitents. On his head they placed the cap with serpents, lizards, and blackbeetles, a green candle in his hand, and round his neck a halter. To Juliana Lopez the same speech was made, and when she had been clothed in similar attire, she stood, although not with equal considence, near to her companion.

Last of all came forth Angela Barrios, who, trembling and bathed in tears, fell down upon her knees, and begged the inquisitors to spare her life. She was answered, that the holy tribunal was not accustomed to put any one to death; that they would do her no harm; and that as her offence was not equal to that of her companions, they had not even provided for her a san benito, the disgraceful badge, by which all who have worn it are rendered, with their samilies, infamous for ever.

When every thing was thus arranged, the procession began to move. In front marched soldiers to clear the way; then ap-

Y 4 peared

peared the standard of the holy office, supported by alguazils, and followed by familiars, with the learned doctors of the inquisition; next advanced the beggar, supported by his crutches, and attended by two secretaries, who carried the whole process in a box lined with velvet; and the little capuchin, as confessor, with the Marquis of Cogolludo, son to the Duke of Medina Cœli, of the blood royal, and the first nobleman in Spain, as alguazil mayor, brought up the rear.

No fooner had the pageant entered the church, than mass began; after which they read the process in the hearing of the whole assembly, which consisted of the principal nobility, with all the ladies of the court, who had been invited by la Marquesa de Cogolludo, and sat with her on a stage raised for this occasion.

The fecretaries were frequently interrupted in reading by loud burfts of laughter, in which the beggar joined. The mirth was, however, in some breafts, attended with a degree of trepidation, when in the process circumstances were related, in which ladies who were present, had been concerned, concerned, and who expected every moment to be named.

After the whole of the process had been read, the chief inquisitor rang a little bell, and the prisoners drew nigh to hear their fentence. That of Ignacio Rodriguez was, to be whipped through the streets of Madrid, to be instructed and fortified in the mysteries of the catholic faith, by a spiritual guide appointed by the court, with whom he was to go through holy exercises for one month, fasting on the Fridays on bread and water; and at the end of this period he was to make a general confession. He was to be five years thut up in the penitentiary house of Toledo, and afterwards to be banished for ever from Madrid and from the royal mansions, with an obligation to inform the holy office wherever he should happen to refide. The fentence of the other was not fo fevere.

The whole ceremony ended about three in the afternoon.

The day following, the beggar, naked down to his waift, was mounted on an afs, attended by the Marquis of Cogolludo. Thus accompanied, the impostor was con-

ducted through the streets, but without receiving any stripes; and as he proceeded, he was frequently refreshed by his friends with bifcuits and wine; whilft many, who knew not the nature of his offence, thinking him a heretic, cried out, viva lar Virgen, viva Maria purissima, to which he replied. por mi que viva.

This ceremony ended, the Marchioness of Cogolludo gave a grand entertainment to the judges and officers of the inquifi-

tion.

Had it been the intention of the king to make the inquisition, preparatory to its abolition, contemptible in the eyes of the whole nation, he could not have taken any step more effectual for the purpose, than he did, when he called upon that tribunal to examine into offences, which should have been infinitely below its notice, and to appear in the procession with a wretch, who should have been punished in secret by the vilest minister of justice,

Others have given the history of this execrable tribunal, both as to its origin and progrefs, together with the form of its proceedings, and cruel treatment of its prifoners.

foners. Upon these particulars I shall be filent; but I must observe, that the original inquisition, under the appellation of the Spiritual Court, still exists in England; where, as in Spain, the poor suffer most by the abuse of its authority. The serpent with us appears to have lost its venom; it is torpid, but not dead, and should, at any future period, our government be changed, it may revive, and be as destructive to our children as it has already been to our progenitors.

In the vicinity of Seville is a curious monument of antiquity, the amphitheatre of Italica, highly worthy the attention of all who are fond of fuch remains, but to me they were little interesting. It is an oval of two hundred and ninety-one feet by two hundred and four. If we may judge of Italica by the extent of its ruins, it was a considerable city, and although so little now is to be seen above the surface of the foil, yet we know that formerly it was a bishop's see, and prior to that period, it gave birth to Trajan, to Adrian, and to Theodosius.

The country round the city to a confiderable

derable distance lies so low, that it is frequently overflowed, and upon fome occafions the water has been eight feet high, even in their habitations. The foil is rich, and being at the same time very deep, its fertility is inexhaustible. The produce is corn, leguminous plants, hemp, flax, lemons, oranges and liquorice. The quantity of this exported from Spain is faid to be annually not less than four thousand quintals, or nearly two hundred tons, a confiderable part of which is supposed to be purchased by the porter-brewers in London. Could they be prevailed upon to omit the cocculus indicus, they might be permitted to use the liquorice without reftraint.

I had the curiofity to make enquiries at the cuftom-house in London, where I found that the principal marts for this produce were formerly Italy and French Flanders, but that of late the importation from Spain has rapidly increased, and that from being only two tons seventeen hundred weight three quarters and fixteen pounds, in the year 1785, it became fifty eight tons three hundred weight one quarter and four-teen

teen pounds, in the year 1788. The whole quantity imported, I found to be as follows:

Lane.	ครากโรโก	to bolling.	Tons.	Cwt.	Qrs.	16.
1785,	into Lo	ndon and the				
	東京大学 大学 子子子 丁丁丁丁		109	14	3	18
1786,	ditto.	and a second	150	2	3	14
1787,	ditto,	Districts	128	19	0	16
1788,	ditto,	o spanning one	183	I	0	17

In this period the proportion of the outports has increased from twenty-four tons eleven hundred weight two quarters and twenty-five pounds, to fifty-five tons fourteen hundred weight two quarters and fifteen pounds. From which circumstance we may collect, that London has taught the country brewers the use of this innocent and pleasant drug in making porter.

In consequence of vapours and miasmata, occasioned by stagnant water, and by frequent floods, the inhabitants of Seville and its neighbourhood are subject to tertians, to putrid fevers, and to hysterical disorders. The pre-disposition to such diseases may be likewise sought for in the quantity of cucumbers and melons consumed by them all the year, in consequence of which they are

likewise infested with worms, accompanied with epilepsies, especially in the more youthful fubjects. This connection I have frequently had occasion to observe; and, from this circumstance I comprehend the principle on which an able physician is mentioned, in the London Practice of Phylic, to have ordered the powder of tin, in a case of epilepfy. Yet, I must acknowledge a fuspicion, that the compiler of that valuable work, who appears to have been some old apothecary in extensive practice, did not discover, at the time when he made a memorandum of the case, that the physician was then prescribing to the occasional cause, and not to the disease. The skill of a practitioner is discerned, not merely by his readiness in distinguishing diseases, but by his attention to their pre-difposing causes. The empyric, often satisfied with prescribing to the symptom, is liable to be fatally mistaken in his distinctions, and never attempts to investigate the cause. Hence it is, that the publication of formulæ, fuch as those to which I have referred, will never be useful to him, or indeed to any one who has not been regularly bred

bred to the profession. The science of phyfic is not fo eafily acquired as fome have imagined, and have been taught to think by physicians, who, with the appearance of difinterestedness and candour, have published their systems of domestic medicine. To diftinguish diseases, and to investigate their cause, requires much knowledge, deep reflection, and a natural fagacity, to be improved by reading, and by extensive practice. Even the most skilful and attentive are fometimes mistaken; and at this we shall not be surprised, if we consider the vast variety of diseases, to which the human frame is subject. The bare inspection of any fystem of nofology will be sufficient to convince a reasonable man that the science is abstruse. In the Nosologia Methodica of Sauvage, we find ten classes, fortythree orders, and more than three hundred genera, in many of which are from ten to twenty species, each distinguished from the other, and denominated by its occafional cause. Dr. Cullen has indeed reduced the number both of genera and fpecies, by confidering many of them as fymptomatic of other diseases, and not as idiopathic:

thic; yet even this diffinction shews more elearly the abstruseness of the science, and how liable they must be, who are not perfectly instructed, to make mistakes. I have dwelt upon this subject, from a firm persuation, that "systems of domestic medicine" have done much mischief to mankind, and that the most dangerous idea which can be impressed upon the mind is, that "every man may be his own physician." In a country like Spain, a person not bred to the profession may be reduced to the necessity of prescribing to his neighbours; but in England, this practice, unless in the clearest cases, is much to be condemned.

I have mentioned the difeases incident to the inhabitants of Seville, arising from humidity; but others there are which originate in heat. Whenever they have the Solano wind, that is, whenever the wind blows from Africa, they become liable to pleurisies; but what is chiefly complained of, both by physicians and by magistrates, is an irritability of nerves, influencing the morals in a variety of ways.

Before I quitted Seville, according to my usual practice, I enquired into the price of labour

[337]

labour and provisions. They are as fol-

Day labourers, four reals and an half, or about $10\frac{3}{4}d$.

Carpenters, from feven to eleven reals a day.

Joiners, if good workmen, twenty-four

reals, or 4s. 9d.

Weavers, with diligence, will earn fif-

teen reals, or 3s.

Bread, from fixteen to twenty-eight quartos, or $4^{\frac{1}{2}}d$. to $7^{\frac{7}{8}}d$. for three pounds of fixteen ounces.

Beef, thirty quartos for thirty - two ounces, or about $4\frac{1}{4}d$. a pound of fixteen ounces.

Mutton, thirty-eight quartos ditto, or $5\frac{11}{12}d$. ditto.

Kid, twenty-four quartos ditto, or 33 d. ditto.

Pork, thirty-fix to forty-two quartos ditto, or $5\frac{1}{16}d$. to $5\frac{29}{32}d$. ditto.

A. D. 1731, the whole confumption of flesh in Seville was one million seven hundred ninety-two thousand two hundred and seventy-nine pounds; of which the ecclesiastics had eight hundred eleven thou-

Vol. II. Z fand

fand and ninety-one pounds, free from taxes; the pounds being here of thirty-two ounces, or two pounds each avoirdupois.

The price of wheat, at different periods, and at different feasons of the year, has been so remarkable, that I shall subjoin a table.

Price of the Fanega of Wheat at Seville.

If we reckon the fanega at one hundred and nine pounds and an half, and the bushel at seventy, then the highest price, A. D. 1652, will be equal to 15s. 3½d. the bushel, and the lowest price, A. D. 1657, to 15. 4½d.

In the corresponding periods, as taken from Smith's Wealth of Nations, the highest price is 7s. 6d. and the lowest 3s. 9d. Had the commerce of corn been unrestrained, the price in Spain could never have varied in such wide extremes, to the destruction of manufactures.

When I had fatisfied my curiofity at Seville, and had refolved next to vifit Cadiz, I fent and hired the cabin of a passage-boat, which was to leave the city in the evening, and falling down the Guadalquivir, was to arrive in about fix and thirty hours at S. Lucar.

The common price for every passenger is eight reals, or about 1s. 7d. but for the whole cabin I paid twenty reals, or a hard dollar, being a small fraction under four shillings sterling. In this I had no great bargain, because my apartment was not more than six feet by sive, and about three feet high. My only comfort was, that I could stretch myself at night upon a bear skin, and saw myself by day separated from a multitude, some of whom were not remarkable for cleanliness.

Among the rabble, I observed a young Z 2 Fran-

Franciscan friar, and a genteel French merchant, who by no means seemed to be satisfied with their situation. At the clofing of the day, the whole assembly joined in the Ave Maria, our young friar taking the lead, and distinguishing himself by the strength and melody of his voice; after which, he entertained the company with some good sequidillas, tiranas, and other Spanish songs. I was so well satisfied with his voice and manner, that in the morning I invited him to my cabin, and was delighted to find in him a pleasant and conversable companion.

The wind was favourable, the sky was clear, and the course being nearly in one straight line, little attention was required to the helm. In such circumstances it was not to be wondered at, that our Palinurus, who had been watching all the night, should be inclined to nod by day. But whilst sleep had taken possession of his eye-lids, his attention seemed to be awake, for when at any time, by the shifting of the wind, either the direction or degree of pressure of the helm was varied, he instantly moved his hand, and even before he opened his eyes,

he put the veffel right. Thus it is respecting sounds. No noise, however violent,
rouses those who are accustomed to hear
it; but, if it be unusual, or if it be such as
would call them to action when awake, although moderate, it makes them start:
thus it seems as if the soul was capable of
exercising judgment during sleep.

The country all the way, for the space of twenty leagues between Seville and S. Lucar, is flat, the soil is deep, and the pastures are covered with a perpetual ver-

dure.

In this little voyage I was so well pleased with my young friar, that I bore his expences, agreed to take him for my companion and my guide as far as Cadiz; and, such was the confidence I reposed in him, that when we had landed on the beach, and taken horses to S. Lucar, I committed my baggage to his care, whilst I hastened to pay my compliments to our conful; but, to my astonishment, on my return, I found that I had been cherishing a thief. He would have made an apology; but, as I wanted no explanation when I had ocular demonstration, I took my leave, without

Z 3

reproaching his ingratitude; and hiring horses, I made the best of my way towards Cadiz.

The country is hilly, the foil at a lower level, and near the fea, is fand; but all the intermediate space is a stiff clay, and the road is abominably bad. The distance is fix leagues.

About mid-way I counted twenty teams of oxen tilling one piece of land. The plough is by no means fuited to the foil, having no fin to the share, no coulter, nor any mould-board; but, instead of the latter, two wooden pins. This, in light sand, may answer very well, but is certainly little calculated to subdue a stubborn clay. The highest of the hills, exposed to the meridian sun, have vines, and the scene is often beautifully varied by extensive plantations of the olive.

As foon as I arrived at Puerto de Santa Maria, I enquired for the passage-boat to Cadiz. They informed me at the posada, that no wherry would pass that day. I, however, pressed forward to the beach, where I was soon surrounded by a number of watermen, who all assured me, that I

was come too late for the common passage-boat, but that for two hard dollars I might have a vessel to myself. Unwilling to be detained all day, I agreed, and was conducted to a boat half filled with passengers, and, after waiting near an hour for the full complement, we set sail. As the wind was fair, we soon made our passage; and, on quitting the boat, I had the mortification to see each person pay two reals, or sour pence halfpenny, instead of two hard dollars, or eight shillings; but it was to no purpose to complain.

boats burning for two bent dollers I might

the same has being house the building death and to the death and the death and the being death and the being death.

HE city of Cadiz occupies a promontory at the extremity of a peninfula, and is joined to the ifle of Leon only by a causeway. It is washed to the eastward by the gentle waves of a well protected road; but, to the westward, it is open and exposed to the fury of the ocean.

The streets are narrow, yet well paved and clean. The most beautiful part of the city looks towards the *Puerto de Santa Maria*, where the houses are losty, built of white free-stone, and ornamented with painted balconies; they have in front a wide parade, well gravelled, planted with trees, and communicating with the sea-road, where the merchantmen and ships of war find shelter.

Two confiderable squares, one for the market, the other called *Plaza de San Antonio*, with the *Calle Ancha* joining to it by way of mall, contribute both to beauty and to health; and the whole city being nearly surrounded by a rampart, this forms an elevated, airy, and delightful walk, much frequented in the evenings.

The most advantageous view of Cadiz and its environs may be had from the signal tower: from hence you look immediately down upon the houses, whose slat roofs, covered with a white cement, have a singular yet most pleasing appearance. To the westward, you command the ocean, with numerous vessels, some stretching away, others entering the harbour; and, on the land side, you discover the four interesting sea-port towns of Rola, Santa Maria, Port Royal, and Caraca, with the isle of Leon, and the connecting causeway, whilst a rich country, hanging towards the setting sun, bounds the distant prospect.

They reckon now in Cadiz, not more than fixty-five thousand nine hundred and eighty-seven souls; but, about ten years fince, it is said to have contained eightyfive thousand, beside about twenty thousand people who entered daily from the sea, and from the adjacent country.

For their pavements, for the cleanliness of their streets, for a well regulated police, for some of their best edifices, and for many wise institutions, they have been indebted to their late governor, Count O'Reilly. Previous to his appointment, this city was remarkable for filth and nastiness; and from the mistaken elemency of Bucarelli, the former governor, robberies were frequently committed, murders were not uncommon, and such was the insolence of thieves, that they gave public warning to the inhabitants, not to make a noise when they should be stopped.

The most distinguished buildings are the two cathedrals, one ancient, the other not yet finished. The former is chiefly remarkable for some good pictures, and for its treasures, consisting of jems, silver candlessicks and lamps, both numerous and bulky; three custodias, one of which, constructed of the finest silver, weighs siftyone arrobas, or more than half a ton; another is mostly of solid gold.

The

The new cathedral is a vast pile, with large and lofty domes, and many well proportioned pillars; yet the whole appears heavy and difgusting. This effect is owing to the fingle circumstance of its being loaded with a very projecting cornice, fuch as would not be void of elegance in a rotunda of vast dimensions, but by no means fuitable to an edifice, which abounds with angles. All who view this building are struck with the absurdity of these preposterous ornaments, yet the architect wants refolution to retract them. It is not, however, impossible, that the waves may wipe away this difgrace to taste, because they have begun their devastations on that fide. and not more than ten feet are interposed between the building and the fea.

Near to the cathedral is the Plaza de Toros, for the bull-feasts, built intirely with wood, making externally a mean appearance; but within, it is both pretty and commodious. I had been solicitous to see the dexterity of the most famous matador in Spain, named Romero, but at this season the bull-feasts are prohibited.

Not far from hence is the observatory,

in a most advantageous situation; but unfortunately the instruments, although the best that our English artists of the day could furnish, are neglected, and will soon be ruined.

The academy for the three noble arts of painting, sculpture, and architecture, is at present, as a building, scarcely worthy of attention. It will, however, be removed into the centre of the city, when a sufficient fund can be provided for that purpose.

In the convents are a few good pictures; more especially in the cloister of the Augustin friars; and in that of the capuchins we find some most worthy of attention, by Murillo. In the garden of the Franciscans is the dragon's-blood-tree mentioned by Quer, in his Botany of Spain.

Of the three hospitals, two are most remarkable for neatness; the third deserves reproach for filth and nastiness; yet this perhaps is the best conducted for general utility. It is called the Royal or Military Hospital, because designed for soldiers, and has sourscore students, who are maintained and educated at the king's expence. It has a good botanical garden, and a theatre

for diffections furnished with subjects from among the patients. One of the two distinguished for neatness is set apart for women; the other, dedicated to San Juan de Dios, and designed for men, is elegant. All the wards are paved with marble in checkers of black and white; and instead of white walls, of wainscoting, or of stucco, the sides are covered with Dutch tiles.

In this hospital, the beds having no curtains, I faw death in all its stages, from its distant approach to its closing scene; from ordinary difease to the last and feeblest struggles, to the pale vifage, and the trembling lips of expiring nature. My attention was directed towards each dying object by a cross at the bed's head, which indicated, that he had received the facraments of the eucharist, and of extreme unction. To one, who had formerly walked an hofpital; to one, whose office leads him to attend the dying and the dead, death must naturally have lost much of its terror; but the view of so many objects of distress, finking under the pressure of disease, I must confess, spread a gloom over my mind, fuch as no one should subject himfelf to, unless he is either called to it in the way of duty, or is blessed with peculiar fortitude of nerves.

They have commonly in this hospital more than fix thousand patients, and out of these they annually lose one tenth; but at different seasons the proportion varies.

Beside these hospitals for the sick, there is a retreat for widows, sounded by Juan Fragela, a Turkey merchant, born at Damascus, and settled at Cadiz, who died A. D. 1756, aged one hundred and sour. In this hospital forty-seven widows have each two good rooms, with a weekly allowance of six reals. They appear to find in it a comfortable refuge.

The most interesting establishment in Cadiz, and the best conducted of its kind in Spain, is the hospicio, or general workhouse. This building is large and lofty, handsome and commodious. In it are received the poor of every nation, who are unable to maintain themselves, and in the first place, orphans, deserted children, and the aged, who are passed the capability for labour, the blind, the lame, idiots, and mad people, but especially priests, when aged

aged and reduced to poverty. Even strangers passing through the city, with permission of the governor, may be entertained two days.

Neatness universally prevails, and all who are here received are clean, well clothed, and have plenty of the best provisions. Care is taken to instruct them in the christian doctrines, and every six months the young people are publicly examined. Their education is to read, to write, to cast accounts; and such as manifest abilities, are not only instructed in the principles of geometry, but, if they are so inclined, are taught to draw. The boys are trained to weaving, and to various crafts; the girls spin slax, cotton, wool, knit, make lace, or are employed in plain work.

Of the eight hundred and thirty-four paupers provided for at the time of my vifiting this establishment, the 21st of March, 1787, the old men were one hundred and nine, the aged women one hundred and thirty-one, the boys two hundred and thirty-five, the girls one hundred and seventy-one, married people eighteen, id ots and mad people, thirty-four; under correction,

rection, men fifty-nine, women thirty-eight; as fervants thirty-nine. The number indeed is perpetually varying; but in the whole of the preceding year, the rations of provision were three hundred twelve thousand four hundred and nine, which number, divided by three hundred and fixtyfive, points out the average to have been eight hundred and fifty-five persons maintained daily in this house. Forty-five looms, and fixteen stocking frames are provided for their fervice, with a fufficient number of spinning-wheels, working benches, tools for carpenters, turners, shoemakers, and taylors, a twifting mill, a spinning jenny, and a machine for carding cotton.

To encourage industry, an account is kept for each individual, wherein he is made debtor to the house at the rate of three reals, or about seven-pence a day, and has credit given him for all the work he does; and should the balance be, as often happens, in his favour, it is paid to him, whenever he can make it appear, to the satisfaction of the directors, that he is able to establish himself without their future aid. I examined the accounts of many

many, who cleared for themselves more than half a crown a week; and were looking out for settlements, that they might marry, and gather the fruits of their own industry.

Adjoining to the house is a spacious shop for the accommodation of all who are willing to work; wherein are provided proper implements, and raw materials; and the moment any one has completed his work, he receives the price of his labour, without any deduction, being at liberty not only to lodge where he pleases, but to spend his gains according to his fancy. Here I counted more than seventy young people at their wheels.

But because many, who would work, are indispensably confined at home, where, from poverty, they are unable to procure either wheels or wool, the governors provide both, and pay them, without any deduction, for their work. By these means, when I was there, of three hundred and forty-eight samilies, more than five hundred souls, were trained to industry. The directors informed me of three children, the eldest nine years of age, who by spin-Vol. II.

ning gained fix reals, that is more than fourteen-pence a day, and maintained a

paralytic father.

Not fatisfied with these exertions, they have established schools in the distant quarters of the city, on the same plan; and, providing the best masters in every branch of business, which they wish to cultivate, they admit freely all who are defirous of being taught.

It is their intention to pick out from the brightest of the boys the best draftsmen, and having instructed them in the various languages of Europe, to make them travel for the acquisition of knowledge, and the

advancement of manufactures.

As the furrounding parishes may not find it convenient to adopt similar institutions on a smaller scale, therefore they receive the infants, the aged, and the infarm, from any of them, on condition of being paid in due proportion for their board.

The management is vested in twelve directors, who are presided over by the governor of the city for the time being, with power to fill up of themselves any vacancy which may happen in their body. Of these, six take the general oversight of the

the various departments; the other fix have each a separate charge, that every one may enjoy, without another to share it with him, the applause which his zeal deferves. One is accomptant general; another is treasurer; a third is steward, to collect the rents, and to manage the revenue; a fourth has the oversight of manufactures; the fifth takes the charge of the provisions; and the fixth provides the raiment.

All their accounts are clear, distinct, and kept with most minute exactness.

The fources of their revenue are from voluntary contributions, legacies, a tax of one real a fanega on all the wheat brought into the city, and from the produce of labour in the house. The whole expence, in the year 1786, was one million three hundred and eighty-five thousand reals, viz.

enthund anny		bush	Reals vellon.
Provisions	one	14	541,640
Clothes	-	ph 2	58,409
Salaries	Din	by	66,590
Sundries	-	1	718,361

1,385,000 reals vellon. A a 2 Which, Which, dividing by one hundred, that is by cutting off two figures from the right, leaves thirteen thousand eight hundred and fifty pounds.

The preceding year the clothing was nearly three times as much; but the other expences differed little from the year now under examination. If we take the average at eight hundred and fifty persons, we shall find the food for each amounting to fix hundred and thirty-feven reals, or fix pounds feven shillings and four pence, and the clothes to thirteen shillings and eight pence. But in order to find out the whole expence on account of each individual, we must consider, that during the three years fince the hospicio was first opened, the goods unfold in the magazines amount to four hundred and feventy-three thousand one hundred and fifty-one reals, which being divided by three, gives one hundred and fifty-feven thousand feven hundred and feventeen for the proportion of one year. Now this being deducted from one million three hundred and eighty-five thousand, leaves one million two hundred and twenty-feven thousand two hundred and

and eighty-three as the expence of the public for the year 1786, and this, divided by eight hundred and fifty, gives one thou-fand four hundred and forty-three reals, or fourteen pounds eight shillings and seven pence for the expence of each, not including the produce of his labour.

This accumulation of goods in their magazines arises from the want of a market. Public bodies being deficient in watchfulness, activity, and zeal, labour under this difadvantage, and will never find a vent for their commodities, unless at a price greatly inferior to what private manufacturers will be able to obtain. From hence arises one argument against such establishments; but although strong, it is by no means the ftrongest, because universally people in confinement, and deprived of liberty, eat too much, and work too little. This beyond a question is the case at Cadiz, in the hospicio, in which they have ninety-two holidays allowed them, and in which the expence of food and raiment is double what it should be.

In the conduct of this establishment we find many things highly to be commended,

A a 3 and

and in the first place we must admire the activity and zeal of the directors. That gentlemen of distinguished talents, and men of business, should be animated with fuch zeal for the public good, as to devote a confiderable portion of their time to it, and affemble every evening to fuperintend this work, can never be fufficiently applauded. In the detail of this bufiness we discover not only zeal, but zeal well directed for the best of purposes. Nothing can be more worthy of imitation than the public work-shop, with the practice of providing wheels and wool for those who are confined at home; nor can any thing more effectually excite the ingenuous mind to industry than the idea that he shall be rewarded for his pains, and in the iffue reap the fruits of his own exertions. But inafmuch as many among the lower classes are destitute of generous fentiments, and as most of them have, by their supineness, reduced themselves to distress and poverty; the regulation introduced into one of our workhouses at Bradford, in Wiltshire, by a most ingenious manager, may perhaps, and, I apprehend, undoubtedly will, be found preferable

preferable for general utility. He calculates what every one is capable of earning, without oppression, and accordingly appoints the morning and the evening task, which must be performed before they either eat or drink. When this task is accomplished, whatever more they earn, they immediately receive. From this conduct of the manager, the poor feel constantly the two-fold incentive of hope and fear, which certainly is much better for them than to be under the influence of one motive only, and that more remote. plan is to receive and to relieve the poor in the hour of diffress; but at the same time to teach them industry, and to get rid of them as foon as possible.

In certain circumstances it may be wise to take children from their parents, and to educate them in public seminaries; but then it should be remembered, that thus trained up they are seldom hardy, and that they have never been found to make good domestics; nor are they qualified to rear a family, like those who have been bred up in cottages, and have, from their infancy,

Aa4

been

been taught to turn their hands to every kind of work.

To take old people from their families, and, under pretence of providing better for their wants, to rob them of those endearments, and that tender care which they would have received from their nearest relatives and friends, is cruel in the extreme: and to leave empty a wretched cottage, or a miserable bed, for the reception of fresh wretchedness and misery, is so far from being either politic or wife, that no conduct can be more remote from wisdom and found policy. If, the moment you had provided for the object of diffress, you were to pull down the habitation, and fet fire to the bed; if you were to destroy the nest, which nothing but wretchedness can occupy, the case would then be different. The principle on which is built this obfervation, being little understood, and less attended to, I shall endeavour to explain it.

If we suppose, in a good climate, with plenty of food and healthy habitations, the number of children in each family on the average to be four, and the mean age to which

which they shall arrive to be fifty years; if the men should marry at the age of twentyone, and the women at nineteen, then one couple, at the end of thirty-three years, will leave twelve descendants. In fiftynine years there will be twenty-four perfons; and at the end of one hundred and twenty-nine years, one hundred and eightyeight, or ninety, four times their first number. Father Feyjoo relates, that A. D. 1590, one man and four women escaped from shipwreck, landed in the isle of Pines, near Madagascar, where, finding plenty of good fruit, they became, when discovered by the Dutch, twelve thousand. Should any one conceive either this fact to be mistated, or my supposition to go much beyond the mark, he is welcome to reduce the number as low as he pleases, provided he leaves me in possession of this principle, that in certain circumstances and in given periods, men will multiply in proportion to their food

We are informed that the Israelites, when they came into Egypt, were seventy souls; that they remained in the land of Goshen sour hundred and thirty years, and that

that when they departed, omitting the Levites, the amount of all that were able to go out to war was fix hundred and three thousand five hundred and fifty males, of twenty years old and upwards. From these data we may conclude, that the Israelites doubled their numbers every twenty-seven years, or nearly within that term.

The population in North-America doubles every five and twenty years; but in fome provinces every fifteen years. In modern Europe it requires, according to Dr. Smith, five hundred years to double the number of its inhabitants. The reason of this becomes obvious, if we call to mind the principles on which depend the propagation of the species, and the causes by which its progress may be retarded, or altogether limited. These are,

of Scotland, where a woman will bring twenty children, and rear only two; or in the woods among the hunting tribes; or even in the most highly cultivated country, when the population is advanced to the utmost ability of the soil to nourish, like as in China, where numbers are exposed, and

and perish in their infancy, for want of food, and where many are deterred from marriage by the fear of wanting bread.

2d, Diseases, either peculiar to the climate as at Senegal and at Batavia; or induced, as at Constantinople, and even in London, by infection, foul air, confinement, and bad nursing: diseases not confined to woods, not ravaging the savage tribes alone, but spreading with more fatal virulence in great, in rich, and in luxurious cities.

3d, Want of commerce for the promotion of industry, and of a market for the surplus

of its produce.

4th, War in all its forms, whether carried on by uncultivated or by polished nations, either for plunder, for conquest, or for the extension of commerce.

5th, Superfitious vows imposed on the monastic orders, and celibacy enjoined the priesthood,

6th, Emigration of the breeding stock, and transference of capitals, arising either from a bad police, or from a vicious form of government, and the want of that security of person and of property which can be enjoyed only where freedom reigns; that

is, where men are fure of being protected from the oppression of arbitrary power, and are subject to none but wise and equitable laws.

7th, Want of land, or the opportunity of acquiring it by industry.

8th, Want of habitations.

Now in proportion as you remove these obstacles, your population will advance; when, therefore, it is your object to increase the number of your people, the way to accomplish this is obvious, and the task in Spain, under a wife government, would be eafy; but when the question is, how to banish poverty and wretchedness, hoc opus, bic labor eft. Yet in the investigation of this question we have one general principle to guide us; increase the quantity of food, or where that is limited, prescribe bounds to population. In a fully peopled country, to fay, that no one shall suffer want is abfurd. Could you fupply their wants, you would foon double their numbers, and advance your population ad infinitum, which is contrary to the supposition. It is indeed possible to banish hunger, and to supply that want at the expence of another; but then

then you must determine the proportion that shall marry, because you will have no other way to limit the number of your people. No human efforts will get rid of this dilemma; nor will men ever find a method, either more natural, or better in any respect, than to leave one appetite to regulate another.'

Having already enlarged upon this subject in a separate treatise, I shall here only lay down general rules, by which we may form a proper judgment of the workhouse in Cadiz.

To institute public shops, where the industrious may at all times find employment, is benevolent and wise: to supply them at home with implements and raw materials is politic; but to expect a profit from the labour of people in confinement is absurd.

To supply the indigent with food and raiment, provided you thereby do not offer a premium to indolence, prodigality, and vice, is salutary.

To correct the lazy and the spendthrist, to shut them up in houses of confinement till they have acquired habits of sobriety and industry, is both just and prudent; but in fuch establishments, to feed, to clothe, to lodge them better than the sober and the diligent are lodged, are clothed, are fed, is not agreeable to any principles of equity, and is inconsistent with sound policy.

Upon the grounds already stated, I may venture to predict, that notwithstanding the zeal and efforts of the gentlemen who fuperintend the general workhouse at Cadiz, and in spite of all their wife regulations, unless the people in it are compelled to work more, and have less to eat, in a course of years the city will be nearly as full of beggars as before the foundation of this house was laid. For whilst all the habitations, now recently emptied, remain to receive new tenants in fimilar diffress with those who quitted them, and whilst fuch a comfortable refuge is at hand for them, indolence, prodigality, and vice will have nothing to fear, but every thing to hope; and the most improvident will not hefitate to contract those bands on which the propagation of their race depends.

I cannot quit the hospicio, without taking notice of the kitchen, on account of

its fingular structure. The chimney is an octagon, in the middle of the room, surrounded by fixteen stoves, eight of them large, and contiguous to it, and as many small, communicating by means of slues. The larger stoves are three feet diameter, by three and an half in depth. Under the kitchen is a cellar to receive the ashes.

The merchants of this city, ever fince the commerce of Peru and Mexico was transported here from Seville, have risen in consideration; but, in the present moment, they have received a severe shock by the removal of the barrier which had secured that monopoly to them. The consequence has been, a glutted market in the Trans-at-lantic colonies, many failures in Cadiz, and not a few in those cities which have eagerly engaged in new and flattering enterprizes, without sufficient capitals to stand the shock of competition, and the heavy losses inevitable upon the first laying open of an extensive commerce.

The Spanish government has never yet acquired any liberal ideas respecting trade, and even at the present moment, some of their best political writers resemble lag hounds

hounds hunting the stale scent, whilst the fleetest are already in possession of the game. Inftead of throwing down every obstacle to commerce, they labour to contract its limits, under the vain hope of establishing a monopoly, without considering either their own want of capital, of induftry, and of an enterprifing spirit, or the utter impossibility of preventing smuggling, whilft other nations, with greater advantages for trade, can underfell them in the market. Until they shall be more enlightened, until they shall have banished their inquifitors, and until the happy period shall arrive, when, under the protection of a free government, they shall have restored public credit, all their prohibitions, all their feverities exercised on the property and persons of the illicit traders, all their commercial treaties, and all their commercial wars, into which ambition may betray them, will be frivolous and vain; because no efforts will ever prevail against the united interests of their own subjects, and of all surrounding nations.

Even at home, the watchfulness and energy of government hath never been able to enforce its prohibitions; for, notwith-flanding these, when I was travelling through Spain, all the men appeared in Manchester cotton goods, and no woman was without her muslin veil. In Spain, as throughout Europe, it is found, that when the price of insurance is less than the duties imposed on the commodity, no laws are sufficient to control the operations of illicit traders.

Previous to the year 1720, the commerce of America was confined to Seville, not intentionally, but by a regulation of Charles V. in the year 1529, who, intending to lay that commerce open for all his subjects of Castille, permitted merchants to freight their ships from the chief ports of Biscay, of the Asturias, and of Gallicia, with Malaga and Carthagena, provided they returned to Seville, under penalty of death, and confiscation of their cargoes, in case of noncompliance with that abfurd injunction. As for the cities belonging to the crown of Arragon, they were wholly excluded from the commerce of America, and could reap no advantage from the newly discovered continent. In consequence of these regu-Vol. II. Bb lations.

lations, and the heavy duties of twenty per cent. imposed on all goods exported to America, or imported from it, beside the duty of tonnage on the vessels, the contraband trade became so lucrative, and of course so extensive in its operations, that little could be carried on to advantage under the fanction of the laws.

A. D. 1720, the emporium was changed, and the commerce, which for two centuries had proved a fource of wealth to Seville, was translated to Cadiz. At the same time the duties were lowered, and, instead of twenty per cent. on exports, rated according to their value, all bale goods and boxes paid a fettled tonnage of five reals and an half of plate for the cubic palm, without examination, or any confideration, either of the nature or the quality of the articles contained in them. The tonnage varied according to a table comprehending the fixteen ports of Spanish America, being different in each. The inexpediency of thefe regulations is too obvious to escape unnoticed by the reader.

These were not, however, the only mistakes made by the Spanish government in of dispatching small vessels frequently, as the market might require, previous to the year 1740, the whole trade was carried on by twenty-seven galleons, and slotas to the number of about twenty-three; the former sailing annually to Porto Bello, the latter, once in three years, to Vera Cruz; the former for the commerce of Peru, the latter for that of Mexico; the smallest vessel being about five hundred and sifty tons, the others from eight hundred to one thou-sand.

The galleons first touched at Carthagena for the convenience of the merchants of Popayan and Santa Fé, who brought gold and bezoar stones, carrying back with them, in exchange, provisions and European goods. But the principal mart was Porto Bello, a town situated in such a barren country, and subject to such noxious vapours, that, except during the annual fair, which lasted forty days, it was deserted. Hither the merchants brought their gold and silver, with Peruvian bark, and Vicuna wool; and beyond this the Spanish trader could not fend his goods, nor could the

B b 2

Peru-

Peruvians dispose of theirs, upon their own account, in Spain.

The English, by an article in the peace of Utrecht, had the privilege of sending annually a ship of five hundred tons to Porto Bello, loaded with all kinds of merchandise; but under covert of this indulgence they commonly freighted one of twice that burthen, accompanied by tenders from Jamaica, with which, when near the port, they exchanged provisions for piece goods; and by that contrivance, usually carried more articles of commerce than five or fix of the Spanish sleet. From A. D. 1737, the fair, and, together with it, Panama and Porto Bello, have declined.

As long as the court confined the trade of Peru to galleons, it gradually decreased, insomuch that instead of employing sifteen thousand tons, it was sunk, in the year 1740, to less than two thousand. (v. Campomanes Educación popular.). But no sooner had the marquis de la Ensenada substituted register ships in the place of galleons, than the trade revived; and when, in the year 1765, the barriers were in part removed, and all Spain, the provinces of Biscay

Bifcay alone excepted, was permitted to fend its productions to Jucatan and the windward islands of Margarita and Trinidad; and when, instead of the duties of the tonelada and palmeo, only six per cent. was laid upon all goods exported, the commerce, which had been like the summer's brook, soon resembled a great river, and enriched all the countries through which it flowed.

In consequence of the benefits received by the partial removal of these impediments to commerce, which were clearly and powerfully stated by count Campomanes, government, although reluctantly, at last (A. D. 1778) consented to lay open the trade of America to all its subjects, those alone excepted, who, not being bound by the general laws of the peninsula, could not safely be admitted to the enjoyment of this privilege. The inhabitants of Biscay have received, however, ample compensation for their loss in the peculiar immunities which they inherit from their sathers, and more especially in the freedom of their ports.

Such have been the general regulations. But Spain, like England, and other nations

of Europe, has granted, from time to time, exclusive privileges to chartered companies, not only to the injury of its citizens at large, and of its manufacturers in particular, but to the oppression of those provinces which have been subjected to a monopoly. If a country could be found uncivilized, yet free, and abounding with capitals unemployed in trade; or if large fums were required for hazardous undertakings, more than could be raifed on the credit of a private company, in fuch a case, the grant of a monopoly, with peculiar privileges, might be endured; but that a trade, once open, should be confined for the benefit of a few, to the disadvantage of the many, is inconfistent with every principle of equity, and of commercial policy.

A. D. 1728, Philip V. granted by charter to a company, taking the name of Guipuzcoa, the exclusive trade of Caraccas, in the province of Venezuela, with the privilege of reshipping, by smaller vessels, all its surplus commodities for Cumana and Guayana, with Trinidad and Margarita, two islands at the mouth of the Oronoco, that this company might exchange European goods

[375]

goods for gold, filver, hides, cacao, fugar, and fuch other fruits as these countries produced; but in the event, cacao became their staple commodity. A. D. 1752, the province of Maracaybo was added to their

grant.

This company at first employed twelve. veffels to carry on its trade, with nineteen to guard the coast from smugglers, varying these numbers as suited their convenience; and for both these purposes they engaged two thousand five hundred seamen. an expence, with the heavy charge of management by directors, fupercargoes, factors, agents, clerks, &c. &c. required confiderable profits, beyond what the private adventurer would have been happy to receive, had the trade been free; and therefore, as was most natural, produced exaction operating against the colonist, a contracted commerce checking the manufacturer at home, and feverities exercifed in vain to restrain the operations of the illicit trader. (v. Campomanes Educ. pop.).

The ports they used in Spain were S. Sebastian and Cadiz, into which, in five years, from 1770 to 1774, they imported

one hundred seventy nine thousand one hundred and sifty-six sanegas of cacao, each sanega being one hundred and ten Castillian pounds; and by this large importation sunk the price of chocolate in Spain to one-half of what it had been before.

The cacao is the fruit of the Theobroma foliis integerrimis, one of the Polyadelphia Pentandria, and flourishes in America between the tropics, but more especially in the province of Venezuela. The fruit grows on the trunk and on the branches, and never fails at any feafon of the year. In Spain they mix fix pounds of the nut with three pounds or three and an half of fugar, feven pods of vanillas, one pound and an half of Indian corn, and half a pound of cinnamon, fix cloves, one drachm of capficum, fome roucou nut, to improve the colour, and a small portion of musk, or ambergris, to give it a pleafant fcent. Some people, however, use only the nut, with fugar and cinnamon. The Indians, to one pound of the nut put half a pound of Indian corn, with an equal quantity of fugar, and fome rose-water.

The

The vanillas are pods filled with minute feeds, from a parafitical climbing plant, deferibed under the name of *Epidendrum Vanillia*, Sp. Pl. 1347, belonging to the Gynandrous class, (v. Pulteney's View of the Writings of Linnæus.)

A. D. 1780, the Carraccas company received the feverest shock in the capture of a rich convoy by Lord Rodney, valued at more than two hundred thousand pounds; and a few years after, their capital was absorbed in a new establishment, called the

Company of the Philippines.

This company, instituted agreeably to the ideas suggested by the Abbé Raynal, in his view of the European settlements, took its rise in the year 1785, with a capital of twelve hundred thousand pounds, and with valuable privileges granted to it for a term of twenty-five years. Previous to this establishment, two ships sailed annually, one from Acapulco, a sea-port of Mexico, and crossing the Pacific Ocean, carried the treasures of America to the Philippines; the other, returning by the same course from Manilla, the capital of Luconia, came to Acapulco, where it was

met by vessels from Lima, loaded with cacao, quicksilver, and hard dollars; in barter for which the merchants sent back china ware, spices, persumes, silk, callicoes, muslins, and printed linens, the produce of the East.

When the Philippine company began its operations, this traffic ceased; and now, under the specious idea of saving time, with freight and insurance, required in conveying the gold and silver of Peru and Mexico, by Europe to the east, these precious metals are sent directly westward to the place of their sinal destination, whilst the more bulky and perishable produce of the East, to the same amount in value, is diverted from its former course, and made to describe, in the opposite direction, that segment of the circle which had anciently been traced by their silver and their gold.

The Philippine islands, almost innumerable, and cast up by volcanos, are healthy, fertile, and, beside all the grains of Europe, produce gold, copper, iron, ship-timber, hemp, alum, salt-petre, cattle, hides, sago, rice, raisins, cacao, sugar, tobacco, wax, sish, and couries, which are the money of Indostan.

[379]

Indostan. These, with the silver, indigo, and cochineal of America, the company barters with the inhabitants of Asia for muslins, cottons, silks, spices, tea, quick-silver, and china ware, which, with the superabundant produce of the islands, are now brought by the Cape of Good Hope to Europe, and are admitted under easy duties into Spain, with a drawback of one-third on their exportation.

Nothing could be more flattering to the hopes of the minister, than a plan apparently fo well contrived, and carried on under the auspices of a most able and enterprising foreigner, who had already fignalized himfelf by the formation of the bank. Yet pleafing as the prospect was, all his hopes, and all the expectations of the nation are upon the point of vanishing. With heavy charges of administration, with every difadvantage in the purchase of commodities, the chief articles of trade are either spoiling for want of a market, or fold to a confiderable loss. As for tea, they never use it; china ware is little in request; the filks, the muslins, and the cotton goods, whilst they could find purchasers, had a tendency to destroy destroy their favourite manufactures; and now, since these latter articles must abide the issue of a fair competition with the English, the company may be said to have received its mortal wound.

In a country subject to despotic power, if the minister of the day will purchase considence, he must bid high for it; if he will have trading companies incorporated, with commanding capitals, he must grant them monopolies, with exclusive privileges, inconsistent with the general good. Yet after all, such companies will hold these privileges by a most uncertain tenure, and when they come to balance their accounts, may find, that whilst they flattered themselves with the hope of gaining more than just and reasonable interest for their money, they have lost the capital itself.

Should this be the event with the Philippine company, the nation will have reafon to rejoice, and the private merchant may triumph in its fall, not on account of its oftenfibly exclusive privileges, but because the whole of America and of Africa being open to its speculations, no limited capitals can stand a competition with it in the

the market. Had they met with the fupport they had reason to expect, they must have swallowed up the whole trade of Spain, and in the issue have been the ruin of that country.

They have already extended their operations to Vera Cruz, to Buenos Ayres, and to most fea-ports of America, and at the prefent moment they are purchasing slaves on the coast of Africa. These formerly were supplied by the English, agreeably to an article in the peace of Utrecht, known by the name of the Affiento. After the expiration of this grant, various contracts have been made, and among others, one recently with Dawfon and Baker, of Liverpool, who have agreed to furnish three thousand annually to the Spanish islands. and upon this contract have received three hundred thousand pounds for those they have supplied already.

The treatment of the negroes in the Spanish settlements is so humane, so wise, so just, and so perfectly agreeable to the principles of political economy, that I rejoice in the opportunity of giving to their government the praise which is so peculiarly

liarly its due. The flave, both in his perfon and his property, is under the protection of the laws, and retains the right of redemption upon equitable terms. These are settled by arbitrators, the flave having the privilege of choosing one, and the master having the nomination of the other; and in case of their disagreement, the judge fixes upon a third.

As to acquisition of property, it is rendered easy to the slave, if he has either industry, or any defire to be free; because he may claim the numerous festivals, beside two hours in the middle of the day, to cultivate his garden, to feed his poultry and his pigs, and to carry his commodities to market.

Is not this regulation more beneficial to the whole community, than if all the flaves indifcriminately were reftored to freedom? In the Spanish islands its good effects have been experienced to such a degree, that most of the artificers, the tradesinen, and mechanics, are negroes, who by their industry and frugality, or by their singular sidelity, have obtained their freedom; and to the credit of this institution it has been observed, that two of the best battalions at the Havannah are composed of blacks, who have been slaves.

It were much to be wished that we might be warranted, with equal justice, to bestow commendations on the Spanish court for liberality of conduct towards the colonies; but unfortunately, the same spirit of monopoly prevails in that, as in the other courts of Europe, the same narrow policy, the same contracted views; producing both at home and abroad languishing manufactures, a crippled trade, with poverty and want of population, and in the colonies, discontents, tending towards dismemberment of empire.

In consequence of oppressive regulations attempted in Peru, that rich province was well nigh lost to Spain, if its political separation may be considered as a loss. For the Marquis de Sonora, to whose memory is due much encomium for his removal of impediments to trade, and for many regulations highly beneficial to the commerce of his country, when he attempted to establish in Peru a royal monopoly of tobacco, with some taxes odious to the people, he kindled

kindled the flames of civil war, (A. D. 1781) and had it not been for the indifcretion of the rebellious chief, the event would have been the same which England experienced upon a fimilar occasion. The leader of this revolt was Tupacamaro, cafique of Arequipa, who, pretending to derive his origin from the facred line, and to be defcended from the fun, called himfelf the Ynca. He had met with friendship and protection from the corregidor; yet he began his revolt by caufing this man to be hanged; and fuch were the numerous instances of his cruelty and devastations committed on the persons and the property of both foes and friends, that many of the Indians joined with government against him. He was at last taken prisoner, and hanged; and by his death a period was put to the civil war, yet not till more than two hundred thousand persons had perished in the conflict.

The minister of the Indies rendered effential service to the mines, by lowering the price of quicksilver from eighty hard dollars to forty-one, that is, to eight pounds four shillings the quintal or hundred weight.

The mines of Spain, chiefly that of Almaden, formerly produced a sufficient quantity of this femi-metal for the colonies. They were at that time under the direction of the famous Bowles, an Irishman of singular abilities, and of fuch integrity, that after having gained millions for the king, his widow has been left to fpend the refidue of her days in poverty. At prefent, Spain can furnish only fixteen thousand quintals. and therefore, to supply the deficiency, a contract has been made with the count de Greppi, the imperial conful at Cadiz, for twelve thousand quintals annually, for which government agrees to give fiftythree hard dollars, felling it again at fixtythree. There was indeed a good mine of quickfilver at Quancavelica, in Peru; but, by covetoufness and bad management, it fell in, and was loft. Even after this, UIloa might have re-established it, had he not been fo indifcreet as to detect and to oppose the mal-administration of some men who were in power.

In consequence of thus reducing the price of quicksilver, and lowering the tribute of gold to one in twenty, and of silvol. II. C c ver

ver to one in ten, instead of taking, as formerly, twenty per cent. on each, the produce of both increased, and in Mexico, A. D. 1776, double the usual quantity of silver was coined, amounting to more than two millions and an half of sterling money.

The whole produce of the Spanish mines in America amounted, in the year 1776, to thirty millions of dollars, or, in sterling, four millions and an half; but in the space of six years it rose considerably, and is now stated at sive millions four hundred thou-

fand pounds.

On the first discovery of America, this treasure centered in Spain; and, as far as laws could operate, was confined to the peninsula. The consequence of this was, the ruin of their manufactures at home; for, as the cortes justly complained to the emperor Charles V. the quantity of gold and filver in stagnation there, raised the price of labour. (v. Campomanes Educ. popular, part iv. page 112, note 98.) Yet, in process of time, the secret was developed, that no human power can stop the natural progress of these precious metals; and Spain, exhausted of its silver, was overwhelmed

whelmed with base copper money, poured into it from surrounding nations. (v. Campomanes, E. P. part iv. p. 272.)

The fact itself is notorious, that the country is destitute of specie, at least relatively so; and count Campomanes, with great propriety, points out the real causes which have produced this effect. As such, he states the expensive wars carried on in the support of foreign dominion; and, in consequence of their having lost their manufactures, the sums expended to purchase from their more industrious neighbours the most common articles of clothing.

In the year 1784, the value of exports to America was as follow, being reduced to pounds fterling:

Span	ish produce.	Foreign produce.	Total produce.
Cadiz 1	,438,912	2,182,531	3,621,443
Malaga	196,379	14,301	210,680
Seville	1 0	30,543	93,256
Barcelona	122,631	21,240	143,871
Coruña	64,575	39,962	104,537
Santander	36,715	90,173	126,888
Tortofa	7,669	289	7,958
Canaries	24,974		24,974
Gijon	4,281	10,190	14,471
Harry Control			
£.1	,958,849	£.2,389,229	1.4,348,078
Indiro.			The

The duties upon these produced one hundred seventy thousand and eight hundred pounds.

The value of imports from America was as follow, being reduced to sterling.

eduno insi	In mo	oney and jewels.	In merchandise.
Cadiz Malaga	26/16 (21/2 C)	8,297,164	2,990,757
Barcelona	oinin.	102,140	91,233
Corunna	Ontone	741,283	90,001
Santander	A Francisco	40,843	100,974
Canaries	orog ar	109,807	52,366
	nirla Į	5.9,291,237	£.3,343,936

The whole import was £.12,635,173, being more than double what was stated by the abbé Raynal; and the duty upon this amounted to five hundred twenty-seven thousand four hundred and twenty-three pounds.

The various prices of commodities coming from America were, A. D. 1775, in Cadiz, viz.

Cochineal, the best, from ninety-seven to one hundred and four ducats of eleven reals of plate the arroba, or about fixteen shillings the pound.

Indigo,

Indigo, from twenty-one to thirty-four reals of plate the pound, the real of plate

being four pence halfpenny.

Cacao, from twenty-fix to forty-one dollars the fanega, but mostly at forty. As, therefore, fixteen fanegas are equal at Cadiz to twenty-five Winchester bushels, it may be reckoned at £.3. 16s. 9d. the bushel.

Sugar, moderately white, twenty-five reals of plate the arroba, or about four pence halfpenny a pound.

Hides, from Buenos Ayres, Caraccas, and Orinoco, about five pence a pound; but from the Hayannah confiderably less

from the Havannah confiderably less.

Vicuna Wool, from Peru, about two pence halfpenny a pound; and from Buenos Ayres, at two pence nearly.

Cotton, clean, about three shillings a

pound.

Copper, from Mexico and Peru, twenty-four dollars the quintal, or about eight pence a pound, on a supposition that one hundred and four pounds Spanish equal one hundred and twelve English; from Chili it is twenty-five per cent. cheaper.

Tin, from America, was twenty dollars

the quintal, whilft that from England fold for twenty-five; the former being fomething more than fix pence halfpenny per pound. (v. Campomanes, Apend. a la Ed. pop. p. 144.)

The whole trade of Cadiz engages about one thousand vessels, of which nearly one-

tenth are Spanish.

The wines most remarkable in Cadiz are Sherry and Pacaretti, both from Xeres and its vicinity; the former is sold for forty-eight pounds a ton, the latter for sifty-fix; and these, when they come to England, in the out-ports, pay, customs, sixteen guineas; excise, eleven pounds eighteen shillings the ton, being four hogsheads or two pipes; in London £.2. 16s. more.

Merchants are liable to peculiar difadvantages in Spain, not only from the nature of the government, which is perfectly defpotic, and from the ignorance, mifinformation, or inattention, too often to be lamented in the best of ministers; not only by absurd prohibitions, by monopolies, and by oppressive duties, but by the misconduct of the provincial governors, who frequently are influenced by mercenary views, in the judgment judgment they pronounce between contending parties.

A late military governor, much favoured by the king, being fupreme in all civil and fiscal causes, when he was new in office, refused taking bribes, and ruled his rapacious officers with a rod of iron; but long before he was difgraced, he became infected with the love of money, and received it upon the most infamous occasions without a blush. Under his protection, merchants defrauded the revenue, and bankrupts found shelter from their creditors. This was notorious; yet, when he was recalled, fuch had been his predeceffors, and fuch were they likely to be who should be appointed to succeed him, that he retired lamented, and carried with him certificates of his good conduct, figned however, chiefly by the monks, whom, previous to his departure, he had much careffed.

On his retreat, his power was divided, and the civil government was administered by the alcaldes mayores of the city, each alternately holding it a week. One of these having, for the trifling consideration of twenty dollars, granted an order to a cre-

Cc4

ditor

ditor in Spain to seize, for his own private benefit, the effects of a bankrupt; the agent of other creditors in England, taking the alcalde by the hand, with forty dollars, readily procured a reversal of the order, and thus purchased substantial justice for his employers.

Another alcalde having promifed, for one hundred dollars, not to grant an attachment to a perfon who had pretentions to fome property, yet granted it, and being reproached for his conduct, replied with coolnefs, "How could I avoid it, when he gave me forty dollars; but be not uneafy, for to-morrow I will take off the attachment."

Obnoxious to fuch abuses, how can commerce flourish?

The province of Andalusia, watered throughout its whole extent by the Guadalquivir, if properly cultivated, should produce corn sufficient, not only for its own consumption, but for exportation. Yet the wheat annually imported is little less than one million and an half of fanegas; the fanega being commonly one hundred weight, but at Cadiz, about three pounds less.

less. Nearly one half this quantity, in the year 1787, came from Africa; eighty-five thousand fanegas were imported from America, and the remainder was furnished by Naples, Sicily, and Sardinia; the whole amount that year being one million four hundred and forty-eight thousand fanegas.

It is remarkable, that though they have an opportunity of confiructing tide-mills, yet, for want of these, they grind their corn with mules, which cofts them ten reals, or two shillings nearly, per quintal or fanega.

To prevent a scarcity of corn, and to make a profit by the fale of it, the city has established a public granary, from which the bakers are supplied at a given price; and, according to that, the magistrates regulate the affize of bread. I vifited this vast repository, and was much surprised to fee the heaps of wheat full of all kinds of trumpery, not only barley, but vetches of various kinds, and a variety of noxious feeds. Had the grain been winnowed by the machine now in common use all over Scotland, it would have been more beautiful to the eye, and much more wholesome for their food.

When I had fatisfied my curiofity in viewing and contemplating the articles of commerce, under the protection of a friend, with whom I had fpent much time at Madrid. I made a little excursion to see the arsenals at the Caraca. Cadiz itself is strongly fortified towards the sea by rocks, and, on the land fide, by works erected at a vast expence. Beyond these are market gardens on the ftrand, watered by norias; and here begins the narrow causeway leading to the isle of Leon, which is an extenfive flat, uncultivated, and scarcely susceptible of cultivation. Although barren, it produces confiderable profit by the numerous falt-pools, which require very little trouble or expence; because the fun and air quickly occasion the water to evaporate, leaving the falt crystallized.

The village of Port Royal, through which we passed, is one long street, well paved, and very pretty. Here my curiosity prompted me to visit M. de Langara, who gave me a polite reception. Pleased with

his

his countenance and manner, I most sincerely pitied his misfortunes.

Ever fince the war, the exertions of Spain have been inceffant to render her marine respectable; but more especially at the time when I was there, all was in motion, and the minister of the marine was making the most strenuous efforts to equip a formidable fleet. This was done to vindicate their claims upon the Mosquito shore, although that territory was never subject to the crown of Spain, and the independent princes, who have dominion there, had been for ages in alliance with the English nation.

When I returned to England, I examined the nature and extent of the fettlement which caused so much uneafiness to Spain: it consisted of no more than five hundred and sixty-nine freemen, including the women and their children, with one thousand seven hundred and sixty-three black slaves, and two hundred and sour head of cattle. The uneafiness arose, therefore, not from the number of the settlers, but from their contraband trade; from their communication with the Mosquitos, who, in time of

war, had been used to molest the Spaniards; and from the apprehension that, by their means, the English, in some suture war, might establish themselves in sorce on the lake of Nicaragua.

This fettlement was certainly valuable to England, as the connecting medium between Jamaica and the Spanish Main, for the exchange of our manufactures with Guatimala, against indigo, cochineal, filver, and hard dollars. Indeed the indigo, growing wild on all that coast, yields the best commodity, and no country produces finer fugar-canes. The infant colony made about a hundred and fifty hogsheads in one year; but being obliged to pay the foreign duty in England, the mills were fuffered to decay. Mahogany was a principal article of their commerce; and of this the annual export was about three million feet. Befide these articles, they sent to England four tons of turtle-shells, paying a duty of one shilling a pound, with a hundred and twenty thousand pounds weight of sarsaparilla, the duty of which, at feven pence a pound, was three thousand five hundred pounds; a fum more than fufficient to difcharge

charge all the expences of this new fettle-

Such was the value of our possessions on the Mosquito Shore, that neither the minister who signed the preliminaries of peace at the close of a disastrous war, nor his immediate successor in office, who ratisfied that peace, would agree to their relinquishment; yet, in the year 1787, the settlement was evacuated, and our most faithful allies were abandoned to the mercy of their inveterate enemies.

The magazines, all well arranged, are full of stores, and new docks have been constructed at a vast expence, for, being sunk in a bed of soft clay and loam, they are consequently difficult to construct, and require unremitted labour to keep them dry. For this purpose they use chain pumps, to the number of sixteen, each worked by eight men, who alternately pump four hours, and rest eight. These are criminals, mostly simugglers, condemned to this painful service, some for three, others for seven, and not a few for source years. The smugglers are, however, distinguished from the thieves by a single

fingle chain, whilft the latter carry two. In this dock-yard alone are a thousand of those miserable creatures. I observed here a practice worthy of imitation. To preferve their store masts from the worms, from the wind, and from the sun, they are buried in sand, and by this simple method are preserved for many years.

In order to shew how much their naval power has advanced in the space of a few years, I shall subjoin a statement of their marine as it stood in the years 1776 and 1788.

I take no notice of the smaller frigates, they being of trifling importance. By this statement it is evident, that in twelve years the naval force of Spain has been nearly doubled, considering merely the guns; but when we take into consideration the number of their leading ships, in point of respectability, it will appear to be much more than doubled; and if we pay attention either to the views of government, or to the peculiar taste and disposition of the new sovereign, we may conclude that no expence will be spared, nor the most watchful attention wanting, to render their navy still more formidable.

It is a question worthy of discussion, whether Spain ought to aim at being distinguished as a naval power; or whether the sums annually expended with that view would not be more profitably employed in exciting industry, by opening communications, promoting agriculture, cherishing manufactures, encouraging trade, and by adopting every plan, followed by the most enlightened nations, to facilitate commercial intercourse. Should she adhere to the colonising system, a powerful navy will be needful to protect her commerce, and to secure her monopolies; but then

then it should be enquired, will the proportion of trade obtained, beyond what she would enjoy if she had lost her authority over these distant provinces, or if their trade was free, pay the expence of arming thus in times of peace, and of employing such a multitude of revenue officers to guard extensive coasts? but more especially, will it indemnify her for all the commercial wars in which she may be engaged to support her trade?

These are questions proper to be resolved; and her best politicians think that she would be richer and more powerful without colonies. If their opinion is well founded, it is absurd to expend so much upon their navy.

No country can boast greater advantages for trade than Spain; and even without a fingle ship she might be powerful and rich. Her wine, brandy, raisins, sigs, almonds, oranges, and nuts; her olives, oil, soapashes and soap; her silks, linens and cottons, were they properly encouraged, with the finest wool, not omitting the esparto, so valuable for cables, &c. her iron, superior in quality to that of other countries, with

with tin, lead, and copper in abundance; with her furplus corn, were the land in proper tillage; all these productions of the foil, with the manufactures, which, under a good government, must naturally find establishment in Spain, would be such a never failing fource of wealth, that should any of the furrounding nations wish to diffurb her peace, she could have no cause to fear, because upon a well-peopled, compact, and united empire, no lasting impresfion can be made. But supposing Spain, with fuch advantages of foil and climate, producing fuch a rich variety of articles for trade, without exhausting colonies, armed for felf-defence, but not inspiring either jealoufy or fear, should confine her views wholly to domestic industry, which of all her neighbours could feel any inclination to molest her? In such circumstances must not every one of them rejoice in her prosperity?

War, among the rude inhabitants of infant countries, has only plunder for its object. This kind of depredation a well disciplined people have no need to dread; and among Vol. II. Dd the

the civilized it has been long fince forgot-But the flames of war have been too often kindled among polished nations, with a view to conquest; and projects of ambition have feldom failed to fpring from wealth and power. Yet the more enlightened begin to fee the folly of fuch pursuits; and all who are skilled in political arithmetic, are able to demonstrate their inexpediency. Not to mention the expence of conquests, both in men and money, it is found, by experience, that an empire, not merely when possessing distant provinces, but as it extends its limits beyond certain bounds, becomes proportionably weak. Whenever this truth shall be universally acknowledged, only one fource of devastation will remain.

At prefent, the greatest danger to the prosperity of Europe is from commercial wars. But when the colonies, still subjugated to the European powers, shall cast off the yoke, and the commercial nations, better acquainted with their true interest, shall duly cultivate the arts of peace, this source of contention will be dried up, and

[403]

and the only furviving contest will be that of industry; or, in the language of the east, men will beat their swords into plough-shares, and their spears into pruning-hooks.

The benefits arising to mankind from this species of contention, are described by Hesiod, with such beautiful simplicity, that I shall take the liberty to quote him.

A twofold envy, kindling twofold ftrife, Marks the viciffitudes of human life. On widely different principles they move; Who hates the one, the other must approve. Parent the one, of fierce protracted jars, To man, predeffined fource of endless ware. Night, fable goddess, gave the better birth, By Saturn wooed in lonely caves of earth. This fpurs the lazy on to noble deeds, While the bright flame just emulation feeds. The idle neighbour of the growing great Envies that fource of wealth which forms his state. Who plants, who fows, with him in both to vie, Shall find some mimic mortal ever nigh. Pregnant with good this mild contention lives; By her each meager artist eats and thrives: Beggar on brother beggars keeps his eye, And learns from them his humble fuit to ply. E'en poets, kindling at another's name, Subdue their hunger by purfuit of fame.

[404]

Perfes, these precepts, which my lines impart,
Grave on the living tablet of thine heart.
Nor let that worse ambition fire thy mind,
To join the mad pursuits of mad mankind:
To whom enough from Ceres golden store
Earth yields for present day, but yields not more.
With this contented, soothe thine anxious soul;
Nor risk thine half by grasping at the whole.
View foreign riches with indifferent eyes,
Toil is the ways and means of rich supplies.

HESIOD'S WORKS AND DAYS.

As we returned from the caraca, on the causeway, a little above the level of the sea, and afterwards in the highest part of the city, I observed a porous kind of rock, composed of slinty gravel, and broken shells, united by a cement, such as was sufficient to connect, but not to fill up the interstices between them. This sact should be treasured in the memory, because it accords with many others, and points out a remarkable event in the history of the earth, subsequent to the grand revolution occasioned by the deluge.

As we returned to the city, I had the fatisfaction of feeing a company of young gentlemen, who amused themselves in the fols

foss of the ramparts, with their favourite diversion of the balloon. Their ball, about eight inches in diameter, is made of leather, strongly inflated by means of a machine, fo as to be exceedingly elastic, after which it is fmeared with clay. This they fmite very obliquely against a wall, with their right hand; and to give it a greater momentum, as well as to protect the fift, the hand is inclosed in a wooden cafe, in which are many wide and deep furrows, croffing at right angles, fo as to leave a corresponding number of blunt points. The antagonists, at the distance of about fourfcore yards, receive the balloon as it rebounds, and before it falls, one of them drives it back again, varying the angle within a given space, so as best to elude the attention of his opponents. This game, a species of fives, yet more elegant than ours, requires much strength and good addrefs.

In the evening I went to see the theatre. It is large, elegant, and commodious; but as plays would not accord with the solemnity of Lent, they compromised the matter,

Dd3

and contented themselves with an exhibition of rope-dancers, tumblers, pantomimes, and puppet shows, with some most whimfical dances, in all which they had excellent performers. The dancers were in the stile of lunatics, every one clothed in some antic dress, and the scene represented the court-yard of a madhouse. They began with country dances, then suddenly they changed to the cotillion, the allemand, the galliego, and the sandango, passing with quick transitions from one to the other, and concluding with a rich variety of sigures.

As it was Lent I heard many fermons, but not one which to me appeared interesting. The most polished orators confine themselves to churches; but as it is sound useful to have some who can adapt themselves to the understandings and feelings of the vulgar, many preachers are appointed to harangue the multitude assembled in the market place, and this they do with a vehemence of voice and gesture suited to their congregations. I observed often three or four of these engaged at the same time, yet keeping such a proper distance as not to interfere.

One Wednesday evening, I went to the Franciscans to hear a penitential sermon delivered by a father of that fociety, who was famous for his discourses. This being finished, all the lights were extinguished, and inflantly the fcourges were applied. We could readily diffinguish a difference in the found, according as the part fubjected to discipline was more or less covered with elastic muscles, and in proportion to the degree of energy with which it was applied; but moderation was the prevailing fentiment, and many fcarcely let the left hand know what the right hand did. How much more fervent is the zeal of Catalans, who feem as if the fcourge drew blood at every stroke! here not a voice was to be heard; whereas at Barcelona the people uttered not only groans and howlings, but a mixture between both more horrible than either.

At times when the market place was not occupied by orators, the feribes took possession of it with their benches, at which they sat with pen, ink, and paper, to write and read letters of all forts, and

Dd4

to execute every kind of deed. The common price of a letter is eight quartos, or two pence farthing; and although this fum is trifling in itself, yet, considering the number of illiterate people who constantly employ them, they contrive to make out a comfortable maintenance.

Before I left Cadiz, I had the fatisfaction of being witness to the ceremonies attending a funeral. After the physicians have turned their back upon a patient, nothing remains for him but confession, absolution, the eucharist, extreme unction, death; and no fooner is the last event announced, than all the friends of the deceased affemble, dar la pesame, that is, to condole with the afflicted widow, who, clothed in mourning, and stretched upon a bed, yet fcarcely visible for want of light, receives their compliments, and in a low voice speaks to each of them. As it is supposed that no one in the family of the deceased can pay attention to the wants of nature, some friend takes care to fend in a dinner ready dreffed, with plenty of every thing the feafon can produce. When they are retired,

tired, the widow, fon, father, brothers, uncles, coufins, and relations, each by name, unite in a meffage of invitation to all the friends of the deceafed, requesting their attendance when the body is carried, the day following, to the grave, and at the fervice to be performed the day after the interment for the repose of the departed foul.

In obedience to this fummons, they affemble at the house of the deceased, and walk in procession to the church, where the corpse is placed during the service before the altar, with the face uncovered, and the hands uplifted, as represented on our ancient monuments, with this difference, that the deceased has a crucifix between his hands. After the funeral fervice, the nearest relatives affemble in the vestry, when all their acquaintance pay their refpects, each by bowing to them, as he paffes filently before them. This finished, they return in folemn proceffion to the house, where the falutation, with the fame filence, is repeated.

If, as in the case of the gentleman whose obsequies

obsequies I attended, the deceased was a person of condition, on the day succeeding the interment, the church is hung with mourning, all light is excluded, excepting that of numerous wax tapers, a funeral pile is erected, and all the relatives assemble round it to attend the service of the mass for the soul of the deceased. On the loss of a husband, the disconsolate widow is under obligation to abstain six months from all public amusements; but the widower is acquitted for a few days abstinence from these.

Few places are more healthy than Cadiz. Yet when the folano, or fouth wind, blows, which comes to them over the fcorching plains of Africa, having only the intervention of a strait, all the passions are inslamed, and during its prevalence, the inhabitants, who are most irritable, commit every species of excess.

For the pleasures of social intercourse, I did not meet with any city more agreeable than this. As all nations are here assembled within narrow limits, by their mutual intercourse they soften each others man-

ners; and as, notwithstanding the late shock, commerce flourishes in a degree, with its never failing attendants, wealth and hofpitality, a stranger may pass away his time with the highest satisfaction to himself. For my part, excepting the vice-conful Mr. Duff, and the imperial conful Count de Greppi, I chiefly affociated with Spaniards. Among these the principal was Don Antonio Ulloa, the well known companion of D. George Juan, to whom I had been particularly recommended. I found him perfectly the philosopher, fenfible and well informed, lively in his converfation, free and eafy in his manners. Having observed at his door two foldiers mounting guard, I expected some pride of appearance, but I met with nothing like it. This great man, diminutive in stature, remarkably thin and bowed down with age, clad like a peafant, and furrounded by his numerous family of children, with the youngest about two years old, playing on his knee, was fitting to receive morning vifitors, in a room, the dimensions and furniture of which, for a few moments, diverted

diverted my attention from himself, the chief object of veneration. The room was twenty feet long by fourteen wide, and less than eight feet high. In this I faw dispersed confusedly, chairs, tables, trunks, boxes, books, and papers, a bed, a prefs, umbrellas, clothes, carpenters tools, mathematical instruments, a barometer, a clock, guns, pictures, looking - glaffes, fossils, minerals, and shells, his kettle, basons, broken jugs, American antiquities, money, and a curious mummy from the Canary islands, or at least its trunk with the head and arms, for having been the common play-thing of his children, they had amused themselves with drawing its teeth, and breaking off its limbs.

Among the extraneous fossils, he shewed me a variety of sea-shells, collected by himfelf near the summits of the highest mountains in America, some on the surface, but many bedded in the limestone rock. When I went to take my leave of him, on quitting Cadiz, he presented me with his Natural History of South America, a work highly deserving to be translated.

As usual, before I left the city, I enquired into the value of provisions, and found here, as in other cities, one contractor, who supplies the carcases at a stipulated price, making his contract for twelve months. These the magistrates sell to the butchers, taking a profit for the city, and fixing the retail prices to the consumer. To avoid unusual fractions of a penny, I shall give these in Spanish quartos, of which eight are equal to two pence farthing.

Beef fells for fifteen quartos the pound of fixteen ounces; veal for fixteen; mutton twenty-one; hog's lard twenty-four; bread feven. Wheat is forty-feven reals the fanega, or five and ten pence nearly for a Winchester bushel.

The pay of a labourer is fix reals, or fomething more than fourteen pence a day; but artifans require double. Merchants reckon one hundred and eight varas to be equal to one hundred yards; but in reality four hundred and five varas make three hundred and feventy-one yards. The feet and inches bear the fame proportion.

Five fanegas of corn are reckoned in trade to correspond with eight Winchester bushels,

[414]

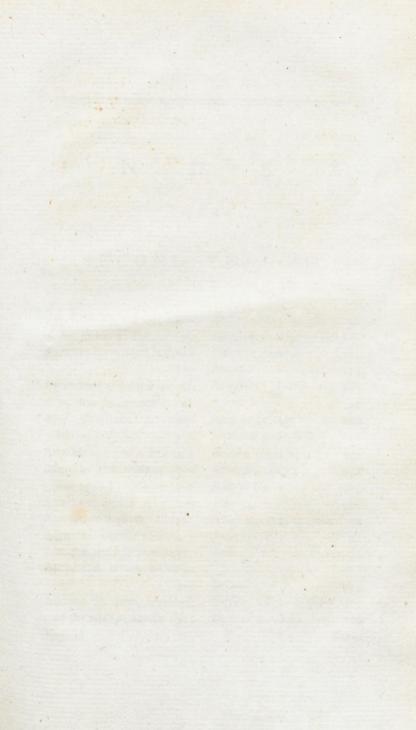

bushels, but the proportion is fixteen to twenty-five.

Eight arrobas of wine make twenty-

five gallons.

One hundred and four Spanish pounds are equal to one hundred and twelve English, at least in the rough calculations of a merchant.
