## UVOD

Register raka za Slovenijo (Register) je eden najstarejših populacijski registrov v Evropi. Ustanovljen je bil leta 1950 na Onkološkem inštitutu v Ljubljani kot posebna služba za zbiranje in obdelavo podatkov o incidenci raka in preživetju bolnikov z rakom. Pred letom 1950 so bili populacijski registri raka le v Hamburgu, na Danskem in v Veliki Britaniji. Od ustanovitve do leta 1975 je Register vodila pokojna profesorica dr. Božena Ravnihar, dolgoletna direktorica Onkološkega inštituta. Njeno delo je nato prevzela profesorica dr. Vera Pompe Kirn, ki je do leta 2003 skrbela za nadaljnje uveljavljanje Registra v domačem in mednarodnem merilu. Tega leta je Onkološki inštitut dobil nov statut, ki je združil Register z Enoto za epidemiologijo v enotno službo Epidemiologija in register raka. V njej so poleg Registra še bolnišnični register Onkološkega inštituta, oddelek za epidemiologijo, kjer tečejo epidemiološke raziskave, in Register organiziranega presejanja za raka materničnega vratu (ZORA), kjer je tudi koordinacija državnega programa presejanja za raka materničnega vratu.

Prijavljanje raka je že od ustanovitve Registra v Republiki Sloveniji obvezno in zakonsko predpisano (Ur. l. SRS, št. 10/50, št. 29/50, št. 14/65, št. 1/80, št. 45/82, št. 42/85; Ur. l. RS, št. 9/92 in št. 65/00). Zbrani podatki so podlaga za ocenjevanje bremena rakavih bolezni v državi, za načrtovanje in ocenjevanje onkološkega varstva na področju primarne in sekundarne preventive, diagnostike, zdravljenja in rehabilitacije, za načrtovanje zmogljivosti in sredstev, ki so potrebni za obvladovanje rakavih bolezni (osebje, medicinska oprema, posteljne zmogljivosti), ter za klinične in epidemiološke raziskave v Sloveniji in v sklopu širših mednarodnih raziskav.

Populacijski register raka opravičuje svoj obstoj, če se zbrani podatki tudi redno obdelujejo, objavljajo in uporabljajo. Ena izmed stalnih oblik vračanja obdelanih informacij so letna poročila. Ker je virov

## INTRODUCTION

The Cancer Registry of Slovenia (Registry) is one of the oldest population based registries in Europe. It was founded in 1950 at the Institute of Oncology Ljubljana (Institute) as a special service for collecting and processing data on cancer incidence and cancer patients' survival. Before 1950, population based registries existed only in Hamburg, Denmark and in Great Britain. From its foundation and until 1975, the Registry was headed by the late Professor Božena Ravnihar who was also general director of the Institute for almost 20 years. At the Registry she was succeeded by Professor Vera Pompe Kirn, who carried on her work until 2003 and contributed a lot to the further development of the Registry as well as its recognition at the national and international level. In 2003, a new Statute was adopted by the Institute that enacted the merging of the Registry and Epidemiology Unit in a single service, Epidemiology and Cancer Registry. The new service comprises, besides Cancer Registry of Slovenia, also the hospital-based Cancer Registry of the Institute, Epidemiology Unit for epidemiologic studies and Cervical Cancer Screening Registry (ZORA), a unit that is also in charge of coordinating the nationally organised cervical cancer screening programme.

Notification of cancer has been compulsory in Slovenia since the foundation of the Registry and prescribed by law (Official Gazette of SRS, No. 10/50, No. 29/50, No. 14/65, No. 1/80, No. 45/82, No. 42/85; Official Gazette of RS, No. 9/92 and No. 65/00). The data collected serve as the basis for assessing the cancer burden in the country, for programming and evaluating primary prevention, diagnosis, treatment and rehabilitation, planning facilities and funding needed for cancer control (personnel, equipment and hospital capacities) as well as for clinical and epidemiological research in Slovenia and in international multicentric studies.

The existence of a population-based cancer registry is justified only by regular processing, publishing and using the data collected. The Registry's Annual Reports are one of the

informacij več, je čas, potreben za dokončanje zbirke, povezavo in objavo podatkov pri nas in po svetu daljši, običajno 2 do 3 leta. Sedanje poročilo prikazuje podatke o novih primerih, registriranih v letu 2004. Za osnovno informacijo o tem, kakšno incidenco pričakujemo leta 2007, dodajamo s posebno statistično metodo ocenjeno napoved za leto 2007.

Register je prva letna poročila izdajal že v letih 1953-57 za leta 1951-55. Prva analiza podatkov za leto 1950 je bila objavljena v **Zdravstvenem vestniku leta 1951**. Podatki za leta 1957-71 so bili objavljani v periodičnih publikacijah Svetovne zdravstvene organizacije **Epidemiological and Vital Statistics** in v **World Health Statistics Report**. Od leta 1965 so bili podatki spet redno objavljani v posebnih letnih poročilih z naslovom **Rak v Sloveniji (1965-77)** in **Incidenca raka v Sloveniji (1978-2003)**, in sicer v slovenskem in angleškem jeziku. Za vsebino publikacije skrbi uredniški odbor, v katerem smo zbrani specialisti raznih vej onkologije. Glede na želje in pripombe uporabnikov letna poročila iz leta v leto dopolnjujemo, vendar skrbimo tudi za to, da so objavljeni podatki iz leta v leto primerljivi.

Incidenca raka je po svetu zelo različna, za raziskovanje teh razlik pa so ključni kakovostni podatki. Prav zato so bili in so naši podatki o incidenci raka zanimivi tudi za svet. Leta 1957 je izšlo prvo obsežnejše poročilo za leta 1950-55 v angleščini. Podatke za leta 1956-60, 1961-65, 1968-72, 1973-76, 1978-81, 1982-87, 1988-92 in 1993-97 so objavili tudi v vseh osmih zvezkih knjige **Cancer Incidence in Five Continents**, ki jo izdaja Mednarodna agencija za raziskovanje raka. Podatki o incidenci in umrljivosti za rakom so vključeni tudi v mednarodne podatkovne baze **EUROCIM, GLOBOCAN, ACCIS**, preživetje slovenskih bolnikov pa je obdelano v mednarodnih študijah **EUROCARE II** in **EUROCARE III**.

Zbrane podatke v Registru obdelujemo in pojasnjujemo v skladu s trenutno perečo problematiko v Sloveniji, z lastnim raziskovalnim programom in s predlogi

regular ways of disseminating information. Because of a variety of data sources, data collection, their linking and publication is rather time consuming (with us and elsewhere) and usually takes two to three years. As preliminary information on expected incidence in 2007, predicted numbers and rates are presented in this report.

The first annual reports of the Registry for the period 1951-55 were issued during the years 1953-57. The first data analysis for the year 1950 was published in **Zdravstveni vestnik** in 1951. The data for the period 1957-71 were appearing in the periodicals **Epidemiological and Vital Statistics Report** and **World Health Statistics Report**, both edited by World Health Organization. From 1965 onwards, the data have been appearing regularly in special bilingual (Slovene-English) annual reports, first entitled **Cancer in Slovenia (1965-77)**, and then **Cancer Incidence in Slovenia (1978-2003)**. The editorial board, responsible for the contents of the report, consists of experts of different specialties in oncology. Our endeavours have always been directed towards further improvement of these publications, by taking into account as much the requests and comments of the users as the comparability of the data from year to year.

There are great differences in cancer incidence among different populations and to evaluate them, good quality data are needed from different parts of the world. That is why our data on cancer incidence have always been interesting also for professional public abroad. In 1957, the first comprehensive report, covering the period 1950-55, was issued in English under the title **Cancer in Slovenia 1955**. The data for the periods 1956-60, 1961-65, 1968-72, 1973-76, 1978-81, 1982-87, 1988-92 and 1993-97 were published in all eight volumes of the **Cancer Incidence in Five Continents** issued by International Agency for Research on Cancer. The data on cancer incidence and mortality are also included in international databases **EUROCIM, GLOBOCAN, ACCIS**. The survival of Slovenian cancer patients is analysed in the international studies **EUROCARE II** and **EUROCARE III**.

The data collected have been processed in accordance with the current problems in

uporabnikov. Izsledke objavljamo v člankih v domačem in tujem strokovnem in poljudnem tisku. Izdane so tudi tri knjige: **Zemljevidi incidence raka v Sloveniji 1978-1987, Preživetje bolnikov z rakom v Sloveniji 1963-1990 in Preživetje bolnikov z rakom v Sloveniji 1983-1997**. Seznam drugih pomembnejših del, objavljenih v zadnjih petih letih, je v dodatku na koncu poročila.

Letošnje poročilo je v celoti dostopno v elektronski obliki na spletni strani Onkološkega inštituta <http://www.onko-i.si/rrs>.

Slovenia, as well as with respect to our research program and suggestions from our users. These data are published in national and foreign medical literature and as publications for lay readers. Three special publications are **Atlas of Cancer Incidence in Slovenia 1978-1987, Cancer Patients' Survival in Slovenia 1963-1990 and Cancer Patients' Survival in Slovenia 1983-1997**. The list of other relevant publications is at the end of this report.

The current annual report is available in pdf format on website of the Institute of Oncology: <http://www.onko-i.si/crs>.

## GRADIVO IN METODE

Osnovni vir podatkov so prijavnice rakave bolezni. Registru jih pošiljajo iz vseh bolnišnic in diagnostičnih centrov v Sloveniji, iz ordinacij osnovnega zdravstvenega varstva pa le izjemoma, če bolnik ni napoten na nadaljnje preiskave in/ali zdravljenje. Dodatni vir podatkov so zdravniška poročila o vzroku smrti in obdukcijski zapisniki z diagnozo maligne bolezni. Zbiranje podatkov za to letno poročilo smo zaključili 31. marca 2007.

Zanesljivost podatkov osvetljujeva dva kazalca: odstotni delež mikroskopsko (histološko ali citološko) potrjenih primerov in odstotni delež raka, registriranega samo iz zdravniških poročil o vzroku smrti (tabela 3). Majhen delež primerov, prijavljenih po izdaji letnega poročila v raznih časovnih obdobjih kaže, da do izdaje poročila registriramo večino novih primerov raka (tabela C).

Od leta 1993 je obvezno prijavljanje sprememb materničnega vratu, označenih kot CIN III (šifra 219 po 8. reviziji MKB), dotlej pa so se registrirale le spremembe, označene v tabelah s šifro 234.0 (karcinom in situ). Primerjava s podatki za obdobje 1961-92 tako ni možna. Po 10. reviziji MKB so vse intraepiteljske spremembe materničnega vratu uvrščene v šifro D06. Od leta 1995 registriramo tudi prijavljene intraepiteljske karcinome mehurja in maligne melanome Clark I.

## MATERIAL AND METHODS

The main sources of data are notifications gathered from all hospitals and diagnostic centres in Slovenia, exceptionally also from primary health care centres in case the patient was not referred for further diagnostic investigations. This information is completed by death certificates and autopsy protocols stating cancer diagnosis. The collection of data for the current report was completed on March 31, 2007.

The reliability of information can be assessed by two parameters: the percentage of microscopically (histologically or cytologically) confirmed cases and by the percentage of cancer cases registered on the basis of death certificates only (Table 3). The small and stable proportion of cases registered after the publication of annual reports shows that the majority of cases are reported to the Registry by the time of the publication of annual reports (Table C).

In 1993, compulsory registration of all cervical intraepithelial dysplasias classified as CIN III was introduced (code 219 according to ICD-8). Till then, only carcinoma in situ (code 234.0) was registered. Thus, the comparison with the data for the period 1961-1992 is not possible. According to ICD-10, all cervical intraepithelial neoplasms (in situ and CIN III) are coded as D06. Since 1995, the number of all reported intraepithelial carcinomas of

Za razvrščanje neoplazem po lokacijah Register od leta 1997 uporablja **10. revizijo Mednarodne klasifikacije bolezni, poškodb in vzrokov smrti**, do takrat pa je uporabljal osmo. Za vse, ki želijo primerjati podatke iz prejšnjih poročil, je dodana tabela 4b. Klasifikaciji različno uvrščata bolezni med maligne, zato število novih primerov raka po obeh klasifikacijah ni enako.

Prav pri uvrščanju med maligne bolezni je treba opozoriti še na klasifikacijo za morfologijo neoplazem, za katero uporabljamo morfološki del Mednarodne klasifikacije bolezni za onkologijo, od poročila za leto 2001 tretjo izdajo. V tej izdaji je spet nekaj sprememb, tudi katere histološke vrste sodijo med maligne. Po tretji reviziji so med maligne uvrščene kronične mieloproliferativne bolezni in mielodisplastični sindromi (sedaj v topografski šifri C96.7). V skladu z novimi pravili tudi mejno malignih ovarijskih tumorjev ne uvrščamo več v kategorijo C56, pač pa v D39.1.

Opozorjamo še, da so v tabeli 7 histološke vrste razvrščene po tretji reviziji morfološkega dela Mednarodne klasifikacije bolezni za onkologijo in združene v drugačne skupine kot v poročilih za leto 2000 in leta pred njim.

V tabeli 6 smo do leta 2002 prikazovali podatke po devetih zdravstvenih regijah. V skladu z Uredbo o standardni klasifikaciji teritorialnih enot - SKTE, ki predpisuje sistematiko členitve ozemlja Slovenije na enajstih ravneh, smo se odločili, da v tej tabeli in regijskih primerjavah uporabimo raven SKTE-3, 12 statističnih regij. Po potrebi pa podatke lahko še vedno posredujemo do ravni upravnih enot.

Za napoved incidence v letu 2007 je uporabljena metoda po Dybi in Hakulinenu, ki je primerna za oceno incidence v krajšem časovnem obdobju, saj upošteva samo obdobje diagnoze in starost; pri napovedih za daljša časovna obdobja je treba upoštevati tudi vpliv rojstne kohorte.

the bladder and all malignant melanomas Clark I have been registered.

Since 1997, cancer sites are coded according to the 10th revision of the **International Statistical Classification of Diseases and Related health Problems (ICD-10)**; before, the 8<sup>th</sup> revision was used (ICD-8). As in earlier reports, Table 4b contains also the data coded according to the 8th revision in order to allow the comparison with the earlier reports. There are differences in coding neoplasms as malignant or benign according to both classifications, so, according to the two classifications, the number of new cancer cases is not equal.

When classifying tumours as malignant, the behaviour digit of the morphology code of the third edition of **International Classification of Diseases for Oncology** is used in the current annual report. In this edition, some changes were introduced in terms of morphology and behaviour code. According to this classification, chronic myeloproliferative disorders and myelo-displastic syndromes are classified as malignant (topography code C96.7), while ovarian tumours of borderline malignancy are currently coded as D39.1 (and not C56).

It should be noted that in Table 7 the morphology codes are grouped in different categories as in reports 2000 and previous and are adapted to the third revision of morphology part of International Classification of Diseases for Oncology.

Till report 2002, the data in Table 6 have been presented by 9 health regions. The new law on regional division of Slovenia introduced the system of eleven levels, and health regions are not official units. So, 12 statistical regions have been chosen to present the data in Table 6 since 2003 report.

The method by Dyba and Hakulinen was used for predictions. It is suitable for predictions in shorter time period, taking into account period of diagnosis and age structure of population. For long-term predictions the cohort effect should be included also.

## DEFINICIJE

**Incidenca** pomeni število vseh v enem koledarskem letu na novo ugotovljenih primerov raka v točno določeni populaciji. V incidenco ne štejemo novih primarnih rakov parnega organa iste lokacije, če je bila histološka vrsta obeh rakov, npr. leve in desne dojke, enaka. Prav tako v incidenco ne štejemo novega pojava raka iste histološke vrste na istem organu, npr. multiple lezije v debelem črevesu. V incidenco so vključeni primeri bolezni bolnikov s stalnim bivališčem na območju Republike Slovenije, ne glede na to, kje so bili ti bolniki zdravljeni.

**Prevalenca** je število vseh živih bolnikov z rakom na določen datum ne glede na leto diagnoze.

**Groba incidenčna stopnja** je število novih primerov na 100.000 oseb opazovane populacije, **starostno specifična stopnja** pove to relativno število v posamezni petletni starostni skupini.

Če analiziramo incidenco v daljšem časovnem obdobju (če se starostna struktura prebivalstva v času spreminja) ali če primerjamo incidenco med populacijami z različno starostno strukturo, je potrebo uporabiti eno od metod starostne standardizacije. **Starostno standardizirana stopnja** je teoretična incidenčna stopnja, pri kateri predpostavimo, da je starostna struktura opazovane populacije enaka starostni strukturi v standardni populaciji. Na slikah 6-11 smo za verodostojnejšo primerjavo incidenčnih in umrljivostnih stopenj z državami v Evropi ali po svetu pri neposredni metodi starostne standardizacije uporabili svetovni standard, v tabeli 6b pa je za primerjavo incidenčnih stopenj med slovenskimi statističnimi regijami za standard uporabljena starostna struktura prebivalcev Slovenije ob popisu leta 2002.

**Kumulativna incidenčna stopnja** (v zadnjem stolpcu tabele 5) je petkratna vsota starostno specifičnih incidenc na 100 prebivalcev posameznih petletnih starostnih skupin do 74. leta starosti. Je neposredna, na dejansko populacijo posamezne petletne starostne skupine standardizirana incidenca ali

## DEFINITIONS

**Incidence** is the number of newly diagnosed cancer cases in a defined population, reported to the Registry for a given calendar year. New primary cancers of the same histology in paired organs, e. g. on the left and right breast, are not comprised in the incidence figures, neither are any new cancers of the same histology appearing in the same organ, e.g. multiple lesions of the colon. The incidence includes only the data on patients with permanent residence in Slovenia, regardless of the place of treatment.

**Prevalence** is the number of all surviving cancer patients, irrespective of the year of diagnosis.

**Crude incidence rate** is the number of new cases per 100,000 population, while the **age specific rate** expresses this relative number in an individual five-year age group.

When analysing the incidence rate within longer time period (if the age structure of population changes) or comparing the incidence between populations with different age structure, age standardisation is needed to adjust the rate for the effect of age. **The age-standardised rate** is a theoretical incidence rate assuming that the age structure in the observed population is the same as in the standard population. In Figures 6-11, the World standard population was used in direct standardisation for better comparison of Slovenian data with those from other countries in the World, while in table 6b the standard is age structure of Slovenian 2002 census population.

**The cumulative incidence rate** (the last column in Table 5) is five times the sum of the age-specific incidence rates per 100 population, calculated over five-year age groups up to the age of 74 years. It is a directly age-standardized rate with the same population size in each age group, or as an approximation to the cumulative risk.

**The cumulative risk** is the risk an individual would have of developing the disease in

približek kumulativnemu tveganju. Kumulativno tveganje je verjetnost posameznika, da zbolí za rakom v izbranem starostnem obdobju, npr. do 74. leta starosti (če, seveda, ne umre prej zaradi drugih vzrokov). Kumulativno stopnjo računamo na 100 in jo izražamo v odstotkih. Kumulativna stopnja raka dojk pri ženskah 7,2/100 pomeni, npr., da bo verjetno 7,2 % deklic, rojenih leta 2004 (ali ena od 14 do 75. leta starosti) zbolelo za rakom dojk.

Kumulativno incidenčno stopnjo smo uporabili za prikaz časovnega trenda incidence, kot je za Slovenijo prikazan na spodnjem delu slike 4. Primerjava oblike krivulj grobih in kumulativnih stopenj na sliki 4 kaže, da povečevanja incidence raka ne moremo pripisati le staranju prebivalstva RS, ampak da k temu prispevajo še drugi nevarnostni dejavniki.

**Relativno preživetje** pomeni razmerje med opazovanim preživetjem proučevane skupine in preživetjem, ki bi ga pričakovali pri enako stari skupini istega spola v slovenski populaciji. Je približek preživetja bolnikov v primeru, da bi upoštevali kot vzrok smrti samo izbranega raka. Izračunano je s paketom relsurv v programu R.

## POJASNILA

**Tabeli A, B in slika 1** prikazujejo osnovne podatke o bremenu raka v Sloveniji: število vseh zbolelih in umrlih za rakom v letu 2004, prevalenco in najpogostejše rakave bolezni po spolu. V **tabeli D** je prikazana incidenca in povprečna letna incidenčna stopnja vseh in izbranih rakov v dveh 5-letnih obdobjih 1995-1999 in 2000-2004. Pomembne so **napovedane vrednosti za leto 2007**, kjer smo tokrat dodali še 95-odstotni napovedni interval.

**Slika 2** opozarja na različno breme raka v raznih življenjskih obdobjih. Rak je skoraj izjema pri mladih do 19 let. Manj kot 3 % vseh rakov je med 20. in 34. letom starosti, ko je pri moških najpogostejši rak mod, pri ženskah pa rak materničnega vratu. Medtem ko

question during a certain age period if no other causes of death were in operation. The cumulative rate is expressed per hundred (per cent). Thus, the cumulative rate (0-74) of 6.4/100 for breast cancer in females means that 6.3% of women (each 16th woman) are expected to develop breast cancer by their age of 75.

The cumulative rate was used to present the incidence time trend in the lower part of Figure 4. The comparison of the curves of crude incidence per 100,000 population and cumulative incidence rates in Figure 4 indicates that the increasing cancer incidence rate in both sexes cannot be attributed only to the aging of population, but also to additional risk factors. Cumulative rate is used also in cancer maps.

**Relative survival** is the ratio of the observed actual survival and the survival that is, in the observation period, expected in general population of Slovenia with respect to age and sex. It is approximation of cancer cause specific survival. It has been calculated with the package relsurv in the programme R.

## COMMENTS

**Tables A and B and Figure 1** present the basic data on cancer burden in Slovenia: the number of new, deceased and prevalent cancer patients in 2004 and the most frequent cancer sites by sex. In **Table D**, incidence and average crude incidence rate in two 5-year periods (1995-1999 and 2000-2004) is presented together with predicted values for 2007 together with 95% prediction interval.

**Figure 2** points to the different proportion of cancer in different age groups. Cancer is more an exception till the age of 19, and less than 3 percent of all cancer is in the age group 20-34, where the most frequent is testicular cancer in males and cervical in females. The proportion of new cancer patients is a bit higher among females in the age group 35-49, while this ratio is reversed between the age of 50-74 years. After the age of 75, there is again a higher proportion

med 35. in 49. letom zbolijo za rakom nekaj več žensk kot moških, se med 50. in 74. letom to razmerje obrne; delež zbolelih je spet večji med ženskami po 75. letu starosti, tudi zato, ker je njihova pričakovana življenjska doba daljša.

Na **sliki 3** je prikazan odstotni delež, za katerega posamezne statistične regije odstopajo od slovenskega povprečja v obdobju 2000-2004. Med najbolj obremenjenimi izstopajo Osrednjeslovenska, Obalno-kraška in Gorenjska regija. Ti podatki so pomembni za načrtovanje zdravstvenih zmogljivosti. Starostno standardizirane incidenčne stopnje (**tabela 6b**) kažejo, da je velik del razlik med regijami posledica različne starostne strukture njihovih prebivalcev.

**Sliki 4 in 5** kažeta trende incidence vseh in izbranih rakov po spolu. Pri grafičnih prikazih so v eno skupino združeni rak debelega črevesa in danke in v drugo rak ust, žrela in grla (glava in vrat).

Na **slikah 6 do 11** so pomembnejši epidemiološki podatki o raku debelega črevesa, rektosigmoidne zveze in danke, dojki in materničnega vratu. Podatki so izhodišče za vrednotenje učinkovitosti presejalnih programov. Zaenkrat v Sloveniji teče le organiziran presejalni program za raka materničnega vratu ZORA, v letu 2007 bomo postopno uvajali organiziran program za raka dojke DORA, v skladu z evropskimi priporočili pa se načrtuje tudi presejanje za raka debelega črevesa in danke. Za verodostojnejšo primerjavo incidenčnih in umrljivostnih stopenj z državami v Evropi ali po svetu smo pri neposredni metodi starostne standardizacije uporabili svetovni standard. Ker je v tem standardu delež starejšega prebivalstva relativno manjši kot v slovenskem prebivalstvu, so te stopnje večinoma manjše od grobih.

**Slika 12** prikazuje **relativno 5-letno preživetje** bolnikov z vsemi in izbranimi raki, zbolelih v letih 2000-2004. Za primerjavo so dodani podatki o bolnikih, zbolelih v letih 1995-1999. Pri moških se je skupno preživetje povečalo za 8 %, delno tudi na račun boljšega prijavitelja raka prostate nižjih stadijev, ki imajo boljšo prognozo, saj je pri tej bolezni preživetje navidezno večje kar za 14 %.

of cancer among females, also because of their longer life expectancy.

In **Figure 3**, the percentage deviation of crude incidence rate in 12 statistical regions from Slovenian average incidence rate in 2000-2004 is presented. The highest incidence rates are in Osrednjeslovenska, Obalno-kraška and Gorenjska region. While these data are important for planning health care facilities, the age standardised rates in Table 6b indicate, that the majority of these differences are due to different age structure of population in these regions.

**Figures 4 and 5** show the incidence trends for all and selected cancers by sex. In graphical presentations, colon and rectal cancers are grouped in one category as colorectal, as well as oral, pharyngeal and laryngeal cancers as head and neck.

**Figures 6-11** show some important epidemiological data on cancers of colon, rectosigmoidal junction and rectum, breast and uterine cervix. These data are important for evaluation of screening programmes. In Slovenia currently cervical cancer screening is the only organised screening programme (Programme ZORA), in 2007 a gradual introduction of organised breast cancer screening is planned (Programme DORA) and it is hoped that colorectal cancer screening will also start soon. In these figures, direct age standardization using the World standard population was applied for valid comparison of incidence and mortality rates with other countries. As in this standard, the proportion of older population is relatively smaller as in slovenian population, these rates are in general lower than crude ones.

In **figure 12**, **5-year relative survival** of all and selected cancer sites in patients diagnosed in 2000-2004 is presented along with the same survival in patients, diagnosed in 1995-1999. In all male cancer patients the relative five-year survival increased for 8%, partially also due to better registration of prostate cancer cases with less advanced stage at diagnosis, who have better prognosis, as in these patients, the survival. In these patients the five-year relative survival increased for 14%. Nine-percent better five-

Za 9 % boljše preživetje bolnikov z rakom debelega črevesa in danke je gotovo realno, posledica boljšega odkrivanja, večje kakovosti zdravljenja in več sistemskega zdravljenja. Pri ženskah je skupno preživetje večje za 4 %. Tudi pri njih je za 8 % boljše preživetje pri bolnicah z rakom debelega črevesa, za 6 % pa se je izboljšalo preživetje bolnic z rakom dojk.

**Tabele** prikazujejo podatke o prebivalcih in incidenci raka v Sloveniji leta 2004 po spolu, starosti, lokaciji, histološki vrsti in stadiju bolezni ob diagnozi, o incidenci po statističnih regijah ter podatke o številu novih primerov raka, ugotovljenih v tem letu po posameznih bolnišnicah, število smrti za rakom po spolu, starosti in lokaciji ter prevalenco najpogostejših rakov.

V **tabeli 3** prikazujemo, na kakšen način je bila postavljena diagnoza registriranim novim primerom raka. Od 10.625 leta 2004 na novo registriranih primerov raka je bila pri 92,6 % diagnoza potrjena mikroskopsko (histološko ali citološko), pri 6,1 % z drugimi preiskavami, 1,3 % primerov pa smo registrirali samo na osnovi zdravniškega poročila o vzroku smrti. Ta zadnji odstotek, ki je že več let podoben, kaže bolnike, ki verjetno zaradi starosti ali napredovale bolezni niso bili zdravljeni v bolnišnici. Kakšna je bila morfološka slika malignomov pri 9.837 primerih, pri katerih je bila diagnoza potrjena mikroskopsko, kaže **tabela 7**. V njej so posebej primeri, ki so potrjeni histološko (90,6 %) in tisti, ki so bili potrjeni samo citološko (9,4 %).

Po 8. reviziji MKB, po kateri so raki razvrščeni v **tabeli 4b**, je novih primerov raka 10.570. Razlika za 55 primerov je posledica novega razvrščanja neoplazem glede na tretjo izdajo morfološkega dela Mednarodne klasifikacije bolezni za onkologijo.

**Tabela 5** prikazuje grobo in starostno specifično incidenčno stopnjo na 100.000 prebivalcev ter kumulativno stopnjo na 100. Število vseh novih primerov raka iz leta 2004 je preračunano na število prebivalcev R Slovenije na dan 30. junija 2004.

V **tabeli 6a** je število novih primerov vseh in izbranih rakov prikazano po statističnih regijah. Te številke so pomembne za načrtovanje zdravstvenih zmogljivosti.

year relative survival of colorectal cancer patients is real, reflecting earlier diagnosis and better surgical and medical oncology treatment. In all female cancer patients the five-year relative survival increased for 4 %. In colon cancer patients the relative survival increased for 8% and in breast cancer patients for 6%.

**Tables** show the data on population and on cancer incidence in Slovenia in 2004 by sex, age, primary site, histology, stage of the disease at diagnosis, on the incidence in the individual statistical regions, and on new cancer cases diagnosed in the current year in different hospitals in Slovenia, on deaths and on prevalence of most frequent cancer sites.

In **Table 3**, data on basis of diagnosis of new cancer cases that were registered in 2004 are presented. From 10,625 new cancer cases, in 92.6% the diagnosis was confirmed microscopically (by histology or cytology), in 6.1% with other investigations and 1.3% was registered from death certificate only. This latter percentage has been similar for several years and represents those patients that, due to advanced age or disease have not been treated in the hospital. The morphology of tumours in 9,837 cases, diagnosed microscopically, is presented in **Table 7**. In this table, cases confirmed by histology (90.6%) and by cytology only (9.4%) are presented separately.

In **Table 4b**, the diagnoses are coded according to the 8<sup>th</sup> revision of International Classification of Diseases. According to this classification, 10,570 new cancer cases were registered. The difference of 55 cases is due to new morphology classification of the third revision of International Classification of Diseases for Oncology.

**Table 5** shows crude and age specific incidence rate per 100,000 population and cumulative rate per 100. For calculation of crude rate, the Slovenian population census on June 30, 2004 was used.

In **Table 6a**, the number of new cases of all and selected cancer sites by different statistical regions is presented.

V **tabeli 6b** starostno standardizirana incidenca kaže, da so razlike med regijami tudi posledica različnega deleža starejših.

**Tabela 8** kaže starostno porazdelitev ekстранodalnih in nodalnih lokacij ne-Hodgkinovih malignih limfomov. Ker je število ekстранodalnih lokacij majhno, so prikazane le absolutne številke.

Iz **tabele 9** je razvidno, kje vse bolnikom postavijo diagnozo. Tako kot že vrsto let, polovica od vseh bolnikov z rakom, ki jim diagnozo postavijo v slovenskih bolnišnicah ali jih tam tudi začnejo zdraviti, v nadaljnjem poteku bolezni pride na posvet ali na zdravljenje na Onkološki inštitut.

**Tabela 10** prikazuje porazdelitev bolnikov po stadiju, v katerem je bila bolezen odkrita. Uporabljena je poenostavljena opredelitev stadijev, ki upošteva vse preiskovalne metode, vključno operacijo; če bolnik ni bil poprej zdravljen, tudi obdukcijo. Uporabljamo in navajamo jo zato, ker so podatki o stadiju bolezni po klasifikaciji TNM na prijavnica pogosto pomanjkljivi. Poenostavljena opredelitev stadijev pri solidnih tumorjih praviloma sledi klasifikaciji TNM. V omejeni stadij je razvrščena bolezen, kjer je tumor označen kot T1 in T2 (razen pri dojki, malignem melanomu in ščitnici, kjer so vključeni tudi tumorji T3, in materničnem vratu, telesu in sarkomih, kjer so vključeni le tumorji T1) in pri kateri niso prizadete regionalne bezgavke in ni zasevkov v oddaljenih organih (N0, M0). V stadiju regionalne razširitve je bolezen, kjer je tumor opredeljen kot T3 in T4 (razen v omenjenih izjemah) in/ali so prizadete tudi regionalne bezgavke (N1), zasevkov v oddaljenih bezgavkah in organih pa ni (M0). V stadiju oddaljene razširitve pa je tista bolezen, pri kateri so zasevki že v oddaljenih bezgavkah ali organih (M1). Maligni limfomi so opredeljeni po klasifikaciji Ann-Arbor.

V **tabeli 11** so uradni podatki o umrljivosti za rakom. Tabela so pripravili na Inštitutu za varovanje zdravja RS.

**Tabela 12** prikazuje prevalenco vseh in pogostejših rakov na dan 31. 12. 2004

These numbers are important for planning health care facilities. The age standardised rates in Table 6b indicate that the majority of the differences are due to different age structure of population in these regions.

Age distribution of extranodal and nodal sites of non-Hodgkin malignant lymphomas is presented in **Table 8**. Owing to a small number of extranodal sites, only the absolute numbers are given.

From **Table 9** it is evident, in which hospitals cancer cases are diagnosed. Observations of many years show that half of the patients diagnosed or initially treated in regional hospitals are later on referred to the Institute of Oncology Ljubljana.

A simplified definition of stages at diagnosis is presented in **Table 10**. The simplified definition is based on all investigation methods, including surgery. In case the patient was not treated before death, the autopsy record is considered as well. The simplified stage definition is used because, in cancer notification forms, the data on stage according to TNM Classification System are often lacking. However in solid tumours, the simplified stage definition often follows the TNM Classification. Localised stage includes all cancers where the tumour has been classified as T1 and T2 (except in breast, malignant melanoma and thyroid cancer, where T3 is also included, and uterine cervix, uterine corpus and sarcomas, where T1 only is included), where neither regional node involvement nor distant metastases are found (N0, M0). The regional stage includes tumours classified as T3 and T4 (exceptions already mentioned) and/or regional node metastases (N1), if no metastases in distant lymph nodes or organs (M0) are found. The disease with metastases in distant nodes or organs is classified as the remote stage (M1). Malignant lymphomas are classified according to Ann-Arbor System.

Official data on cancer mortality are given in **Table 11**. The table has been prepared at the Institute of Public Health of the Republic of Slovenia.

Data on prevalence of all and most frequent cancers on December 31, 2004 are presented in **Table 12**.

## ZAHVALA

Zdravniki, medicinske sestre in administrativno osebje iz slovenskih bolnišnic in drugih zdravstvenih ustanov so Registru pošiljali Prijavnice s podatki o novih bolnikih z rakom in njihovi nadaljnji usodi in nam pomagali dopolnjevati prijave z manjkajočimi informacijami.

Vsaj polovico podatkov, obdelanih v tem poročilu, sta prispevali sodelavki Bolnišničnega registra Onkološkega inštituta v Ljubljani Ana Dotzauer in Maruška Ferjančič.

Naše delo bi bilo bistveno težje brez dolgoletnega sodelovanja s Centralnim Registrom prebivalstva RS, z Inštitutom za varovanje zdravja RS in Statističnim uradom RS.

Vsem imenovanim in tudi drugim, ki so kakorkoli prispevali, da smo lahko prikazali rezultate našega dela v tem poročilu, se najlepše zahvaljujemo.

**Uredniški odbor**

## ACKNOWLEDGEMENT

Physicians, nurses, and administrative staff from Slovenian hospitals and other health institutions have provided the data on new cancer patients and their medical history as well as helped us in obtaining additional information when needed.

Our co-workers at the Hospital Registry of the Institute of Oncology, Mrs. Ana Dotzauer and Maruška Ferjančič have contributed at least a half of the information presented in this report.

The long-term collaboration with the Population Registry of the Republic of Slovenia, the Institute of Public Health of the Republic of Slovenia and the Statistical Office of the Republic of Slovenia is indispensable for our work.

We thank all of them as well as to all others who have helped to present the results of our work in this report.

**Editors**

**SELECTION OF PUBLICATIONS, published by the members of Epidemiology and Cancer Registry in the last five years (also in cooperation with other researchers)**

### **2002**

Capocaccia R, Colonna M, Corazziari I et al. and the EUROPREVAL Working Group. Measuring cancer prevalence in Europe: the EUROPREVAL project. *Ann Oncol* 2002; 13(6): 831–9.

Collaborative Group on Hormonal Factors in Breast Cancer. Breast cancer and breastfeeding: collaborative reanalysis of individual data from 47 epidemiological studies in 30 countries, including 50302 women with breast cancer and 96973 women without the disease. *Lancet* 2002; 360(9328): 187–95.

Debeljak A, Triller N, Pompe Kirn V et al. Strokovna izhodišča za internistično obravnavo bolnika s pljučnim rakom. *Zdrav Vestn* 2002; 71(6): 385–90.

Ećimović P, Pompe Kirn V. Second primary cancers in laryngeal cancer patients in Slovenia, 1961–1996. *Eur J Cancer* 2002; 38(9): 1254–60.

Lambert R, Guilloux A, Pompe Kirn V et al. Incidence and mortality from stomach cancer in Japan, Slovenia and the USA. *Int J Cancer* 2002; 97(6): 811–8.

Micheli A, Mugno E, Krogh V et al. and the EUROPREVAL Working Group. Cancer prevalence in European registry areas. *Ann Oncol* 2002; 13(6): 840–65.

Pompe Kirn V. Epidemiological features of laryngeal cancer in Slovenia. *Zdrav Vestn* 2002; 71: Suppl 3: 59–63.

Pompe Kirn V: Rak v Sloveniji - število in preživetje bolnikov. In: Frankič D ed. Prepoznavanje in zdravljenje raka. Strokovno izpopolnjevanje magistrov farmacije v letu 2002, Ljubljana 2002. Ljubljana: Lekarniška zbornica Slovenije, 2002: 5–8.

Pompe Kirn V. Preživetje bolnikov z rakom v Sloveniji - novosti iz Registra raka za Slovenijo za obdobje 1988–1997. *Onkologija* 2002; 6(1): 28–31.

Primic Žakelj M. Rak danes in rak šest desetletij nazaj. In: Skela Savič B, eds. Razvoj onkologije in onkološke zdravstvene nege. Kakovost v zdravstveni negi. 29. strokovni seminar, Ljubljana 2002. Zbornik. Ljubljana: Sekcija medicinskih sester v onkologiji pri Zbornici zdravstvene nege Slovenije - Zvezi društev medicinskih sester in zdravstvenih tehnikov Slovenije, 2002: 19–24.

Uršič Vrščaj M, Primic Žakelj M, Kirar Fazarinc I. Epidemiologija raka materničnega vratu v Sloveniji in v svetu ter nacionalni program ZORA. In: Možina A ed. Zgodnja detekcija raka materničnega vratu : kolposkopski tečaj, Ljubljana 2002. Zbornik predavanj. Ljubljana: Klinični center - Ginekološka klinika, 2002: 5–7.

### **2003**

Benedičič Pilih A, Pompe Kirn V, Kokol P, Povalej P, Arzenšek J. Kožni melanom v Sloveniji in potreba po preventivi. In: Miljković J ed. Dermatološki dnevi. Strokovno izpopolnjevanje iz dermatologije z mednarodno udeležbo, Maribor 2003. Maribor: Splošna bolnišnica, 2003: 27–37.

Berrino F, Capocaccia R, Gatta G et al, eds. Survival of cancer patients in Europe: the EURO-CARE-3 study. *Ann Oncol* 2003; 14(5).

Lutz JM, Francisci S, Pompe Kirn V et al and EUROPREVAL Working Group. Cancer prevalence in Central Europe: the EUROPREVAL study. *Ann Oncol* 2003; 14(2): 313–22.

Pompe Kirn V. Rak v številkah : da bi ga bolje razumeli in lažje obvladovali. *Okno* 2003; 17(1): 27–9.

Pompe-Kirn V, Zakotnik B, Zadnik V. Preživetje bolnikov z rakom v Sloveniji 1983–1997. Ljubljana: Onkološki inštitut, Register raka za Slovenijo, 2003.

Primic Žakelj M, Arko D, Renner M, Žgajnar J. Rak dojke v Sloveniji: epidemiologija in presejanje. *Zdrav Vestn* 2003; 72: Suppl 2: II–179–II–181.

Primic Žakelj M, Zadnik V. Epidemiologija raka dojke. In: Takač I, Arko D eds. 30 let Centra za bolezni dojke v Mariboru. Simpozij z mednarodno udeležbo, Maribor 2003. Zbornik predavanj. Maribor: Splošna bolnišnica, 2003: 15–27.

Primic Žakelj M, Zadnik V. Rak dojke: razširjenost in nevarnostni dejavniki. In: Štabuc B, ed. Več znanja o raku, manj smrti. Seminar, Strunjan 2003. Ljubljana; Koper: Zveza slovenskih društev za boj proti raku; Obalno društvo za boj proti raku, 2003: 55–63.

Primic Žakelj M, Zadnik V. Staranje prebivalstva in rak. In: Skela Savič B ed. Starost in rak. 30 strokovni seminar, Ljubljana 2003. Ljubljana: Sekcija medicinskih sester v onkologiji pri Zbornici zdravstvene nege - Zvezi društev medicinskih sester in zdravstvenih tehnikov Slovenije, 2003: 5–11.

Uršič Vrščaj M, Primic Žakelj M, Kirar Fazarinc I. Epidemiologija raka materničnega vratu v Sloveniji in v svetu ter nacionalni program ZORA. In: Možina A, ed. Zgodnja detekcija raka materničnega vratu in kolposkopski tečaj in Praktična kolposkopija in ambulantno zdravljenje prekanceroze, Ljubljana 2003. Zbornik predavanj. Ljubljana: Klinični center; Ginekološka klinika; Združenje za ginekološko onkologijo, kolposkopijo in cervikalno patologijo, 2003: 92–5.

Zadnik V, Šelb J. Osnovni vzroki smrti s kazalniki umrljivosti v Sloveniji in letu 2001. *Zdrav Vestn* 2003; 72(7–8): 429–4.

### **2004**

Benedičič Pilih A, Pompe Kirn V, Kokol P, Povalej P. Kožni melanom v Sloveniji in potreba po preventivi. In: Bešič N, Anderluh F, Benedik J et al eds. Novosti v onkologiji in smernice za obravnavo bolnic z rakom dojke in bolnikov z malignim melanomom. 17. onkološki vikend. Laško: Kancerološko združenje Slovenskega zdravniškega društva, 2004: 107–9.

de Vries E, Boniol M, Dore JF, Coebergh JW, Pompe Kirn V and Eurocare Working Group. Lower incidence rates but thicker melanomas in Eastern Europe before 1992: a comparison with Western Europe. *Eur J Cancer* 2004; 40: 1045–52.

Jazbec J, Ećimović P, Jereb B. Second neoplasms after treatment of childhood cancer in Slovenia. *Pediatr Blood Cancer* 2004; 42: 574–81.

Kirar Fazarinc I, Primic Žakelj M. Stanje na področju presejanja raka dojk in vzpostavitve organiziranega programa v Sloveniji. *Radiol Oncol* 2004; 38: Suppl 1: S21–5.

Kirar Fazarinc I, Primic Žakelj M. Izvajanje Državnega programa ZORA in kazalci organiziranega presejanja raka materničnega vratu v Sloveniji. In: Bešič N, Anderluh F, Benedik J et al eds. *Novosti v onkologiji in smernice za obravnavo bolnic z rakom dojk in bolnikov z malignim melanomom*. 17. onkološki vikend. Laško: Kancerološko združenje Slovenskega zdravniškega društva, 2004: 105–6.

Noričič G, Repše S, Pompe-Kirn V. Rezultati zdravljenja raka debelega črevesa in danke v Sloveniji - analiza leta 1997. *Gastroenterolog* 2004; 8: Suppl 2: 287–9.

Primic Žakelj M. Smernice za zgodnje odkrivanje raka. In: Skela Savič B, Logonder M, Lokar K eds. *Ukrepi danes, da bomo živeli jutri*. 31. strokovni seminar Sekcije medicinskih sester v onkologiji. Moravske toplice: Zbornica zdravstvene nege Slovenije-ZDMSZTS, 2004: 28–33.

Primic Žakelj M, Kirar Fazarinc I. Cervical cancer screening a Slovenian experience. In: *Better health outcomes through public health approaches in primary health care*. Fourth international forum on common access to health care. Brdo pri Kranju: Ministry of Health, 2004: 1–5.

Primic Žakelj M, Ravnihar B and Collaborative Group on Hormonal Factors in Breast Cancer. Breast cancer and abortion: collaborative reanalysis of data from 53 epidemiological studies, including 83000 women with breast cancer from 16 countries. *Lancet* 2004; 363: 1007–16.

Primic Žakelj M, Zadnik V. Kajenje in rak v Sloveniji. In: Štabuc B, Primic Žakelj M, Zdešar A eds. *Kajenje in rak*. 12. seminar "In memoriam dr. Dušana Reje". Ljubljana: Zveza slovenskih društev za boj proti raku, Onkološki inštitut, Inštitut za varovanje zdravja RS, Rdeči križ Slovenije, 2004: 36–42.

Primic Žakelj M, Zadnik V. Epidemiologija raka dojk v svetu in v Sloveniji. *Radiol Oncol* 2004; 38: Suppl 1: S1–S7.

Primic Žakelj M, Zadnik V, Škrlec F. Nekaj osnovnih podatkov in zanimivosti iz novega letnega poročila Registra raka za Slovenijo. *Onkologija* 2004; 8: 22–4.

Tyczynski JE, Bray F, Pompe Kirn V et al. Lung cancer mortality patterns in selected Central Eastern and Southern European countries. *Int J Cancer* 2004; 109: 598–610.

Tyczynski JE, Pleško I, Primic Žakelj M et al. Breast cancer mortality patterns and time trends in 10 new EU member states: mortality declining in young women, but still increasing in the elderly. *Int J Cancer* 2004; 112: 1056–64.

Zadnik V, Primic Žakelj M. Vpliv dejavnikov tveganja in genetske nagnjenosti na pojavljanje raka dojk pri mladih ženskah. In: Bešič N, Anderluh F, Benedik J et al eds. *Novosti v onkologiji in smernice za obravnavo bolnic z rakom dojk in bolnikov z malignim melanomom*. 17. onkološki vikend. Laško: Kancerološko združenje Slovenskega zdravniškega društva, 2004: 114–5.

## 2005

Bray F, Carstensen B, Moller H, Zappa M, Žakelj MP, Lawrence G, et al. Incidence trends of adenocarcinoma of the cervix in 13 European countries. *Cancer Epidemiol Biomarkers Prev* 2005; 14: 2191–9.

Brennan P, Scelo G, Hemminki K, Mellemkjaer L, Tracey E, Pompe-Kirn V, et al. Second primary cancers among 109 000 cases of non-Hodgkin's lymphoma. *Br J Cancer* 2005; 93: 159–66.

Hemminki K, Scélo G, Boffetta P, Mellemkjaer L, Tracey E, Andersen A et al. Second primary malignancies in patients with male breast cancer. *Br J Cancer* 2005; 92: 1288–92.

Kobal AB, Horvat M, Prezelj M, Pompe-Kirn V, Zadnik V, Osredkar J, et al. Vpliv elementarnega živega srebra na peroksidacijo lipidov in funkcijsko sposobnost posameznih tarčnih organov pri prebivalcih mesta Idrija in delavcih rudnika : zaključno poročilo raziskovalnega projekta (skrajšana verzija). *Idrij Razgl* 2005; 50: 20–30.

Noričič G, Repše S, Pompe-Kirn V. Rak debelega črevesa in danke v Sloveniji - razlike v kirurškem zdravljenju in preživetju bolnikov. *Zdravestv* 2005; 74: št. 12, 767–70.

Pompe Kirn V. Podrobnejši pregled trenda incidence raka ščitnice v obdobju 1983–2002 v Sloveniji. *Onkologija* 2005; 9: 12–4.

Primic Žakelj M. Epidemiology of breast cancer: incidence and mortality trends, prevention and control. 3rd Sarajevo breast cancer conference. Sarajevo: ESO, 2005: 15–27.

Primic Žakelj M. Evropske smernice za presejanje žensk za raka materničnega vratu. In: Možina A, ed. *HPV in preprečevanje raka materničnega vratu - Kje smo in kako naprej? (HPV infection and cervical cancer prevention - Where are now, what to do next?)* Mednarodni znanstveni simpozij. Ljubljana: Združenje za ginekološko onkologijo, kolposkopijo in cervikalno patologijo, 2005: 9–13.

Primic Žakelj M. Prenovljeni evropski kodeks proti raku. In: Štabuc B, ed. *Poročilo Zveze in regijskih društev za boj proti raku Slovenije: leto 2004*. Ljubljana: Zveza društev za boj proti raku Slovenije, 2005: 6–11.
